PREFACE

This book has been prepared to meet the needs of pupils and teachers in Grades III and IV, not alone as to subject matter but also as to convenience of arrangement. It is a well-recognized fact that every detail of the work in the primary grades must be presented to a child several times, in order that it may be assimilated, and hence that the plan of recurring topics must be followed in the preparation of a textbook for these years.

An earnest effort has been made to arrange the exercises in such a way as always to avoid the appearance of a difficult task. Young children are easily discouraged, and a topic appeals more to a beginner if presented with an appearance of brevity than when it extends over two or three pages. The lessons have, on this account, been so arranged as to fill either a half page or a page, and they may be further subdivided as occasion demands.

It is recognized that a large proportion of the work in the primary grades is of an oral nature, and for this reason a few typical oral problems are given at the beginning of each exercise. It is hardly necessary to say that the teacher will get the best

results by supplementing this oral work with problems having some local significance, and that the various interests of the children at the particular time should be drawn upon. Work that they may be doing in industrial arts, local concerns of the community in which they may have an interest, their games, and their objects of study in other lines, furnish material for work in arithmetic that should not be neglected.

The authors have sought fairly to balance the abstract and the concrete, and to furnish a wide range of modern applications that appeal to the interests of children, and that contain information that will be of value to them. They have put forth their best endeavors to make the book thoroughly practical, avoiding all of those transient extremes of method that appear so frequently but have merely a temporary interest.

For schools that desire an introduction to decimal fractions in Grade IV a brief treatment of this topic is provided in the Appendix.

Any corrections or suggestions relating to the work will be thankfully received.

NUMBERS TO 100

I. REVIEW OF NUMBERS TO 10

1. Counting

Examples 1 and 2, oral — Examples 3 to 5, written

1. Count from 1 to 10.

2. Count by 2's from 2 to 10.

<i>Figures</i>	1	2	3	4	5
<i>Names</i>	one	two	three	four	five
<i>Objects</i>	•	••	•••	••••	•••••
<i>Figures</i>	6	7	8	9	10
<i>Names</i>	six	seven	eight	nine	ten
<i>Objects</i>	•••••	••••• •••••	••••• •••••	••••• •••••	••••• ••••• •••••

Naught or zero is written thus : 0.

3. Write the numbers from 1 to 10.

4. Write the numbers found in counting by 2's from 2 to 10.

5. Write the numbers found in counting by 3's from 3 to 9.

2. Adding 1's

Examples 1 to 4, oral — Examples 5 to 13, written

1. How many squares are 5 squares and 1 square?

2. How many marbles are 4 marbles and 1 marble?

3. How much is $7+1$? $6+1$? $3+1$? $5+1$?

4. Add 2 feet and 1 foot; 3 cents and 1 cent.

Copy and add:

5.	6.	7.	8.	9.	10.	11.	12.	13.

21. Ordinal Numbers

Examples 1 to 6, oral — Examples 7 to 9, written

In counting we call 1 the *first* number after 0, 2 the *second* number, 3 the *third* number, 4 the *fourth* number, 5 the *fifth* number, and so on.

Calling 1 the first number, state the

- | | |
|-------------------|--------------------|
| 1. Second number. | 4. Seventh number. |
| 2. Fourth number. | 5. Sixth number. |
| 3. Ninth number. | 6. Eighth number. |
7. Write the first number after 6.
 8. Write the fifth number after 4.
 9. Write the fourth number after 2.

II. COUNTING TO 100

22. Counting by 10's

Examples 1 to 9, oral — Examples 10 to 14, written

1. We call 2 tens *twenty*, and write it thus : 20.

Read and learn :

2. Thirty, 3 tens = 30. 6. Seventy, 7 tens = 70.
 3. Forty, 4 tens = 40. 7. Eighty, 8 tens = 80.
 4. Fifty, 5 tens = 50. 8. Ninety, 9 tens = 90.
 5. Sixty, 6 tens = 60. 9. Hundred, 10 tens = 100.

Write the names of these numbers :

10. 60. 11. 70. 12. 20. 13. 50. 14. 90.

23. Counting

Examples 1 to 11, oral — Examples 12 to 17, written

1. Count from 10 to 20 : 10 and 1, and so on.

Read and learn :

2. Eleven, $10 + 1 = 11$. 7. Sixteen, $10 + 6 = 16$.
 3. Twelve, $10 + 2 = 12$. 8. Seventeen, $10 + 7 = 17$.
 4. Thirteen, $10 + 3 = 13$. 9. Eighteen, $10 + 8 = 18$.
 5. Fourteen, $10 + 4 = 14$. 10. Nineteen, $10 + 9 = 19$.
 6. Fifteen, $10 + 5 = 15$. 11. Twenty, $10 + 10 = 20$.

Write these numbers in figures :

12. Nineteen. 14. Eighteen. 16. Sixteen.
 13. Seventeen. 15. Twelve. 17. Fifteen.

24. Adding 10's*Examples 1 to 4, oral — Examples 5 to 16, written*

- Count by 10's from 10 to 100.
- Read: 20, 40, 30, 90, 60, 50, 80, 70, 10, 100.
- How many are 2 and 4? 2 cubes and 4 cubes?
2 tens and 4 tens? 20 and 40? 30 and 50?
- How much is 5 and 4? 50 and 40? 60 and 30?

Copy and add:

5.	6.	7.	8.	9.	10.	11.	12.
2	20	30	40	60	70	30	20
<u>5</u>	<u>50</u>	<u>20</u>	<u>30</u>	<u>20</u>	<u>10</u>	<u>60</u>	<u>70</u>

13. $6 + 4$. 14. $60 + 40$. 15. $70 + 30$. 16. $80 + 20$.

25. Subtracting 10's*Examples 1 to 4, oral — Examples 5 to 12, written*

- How many cents are 7 cents less 2 cents?
- How many tens are 7 tens less 2 tens? 9 tens less 2 tens?
- How much is $70 - 20$? $60 - 40$? $80 - 10$?
- How much is $10 - 4$? 10 tens — 4 tens?
 $100 - 40$? 100 feet — 60 feet?

Copy and subtract:

5.	6.	7.	8.	9.	10.	11.	12.
10	100	100	100	90	80	70	90
<u>7</u>	<u>70</u>	<u>10</u>	<u>30</u>	<u>60</u>	<u>30</u>	<u>20</u>	<u>30</u>

26. Reading and Writing Numbers*Examples 1 to 12, oral — Examples 13 to 18, written*1. 20 and 1 are 21, and 21 is read *twenty-one*.

Read these : 22, 23, 24, 25, 26, 27, 28, 29.

2. Read these : 31, 42, 55, 67, 73, 80, 99.

Read aloud :

3. 47. 5. 72. 7. 33. 9. 35. 11. 97.

4. 63. 6. 86. 8. 78. 10. 45. 12. 92.

Write in figures :

13. Fifty-one. 16. Forty-four.

14. Sixty-three. 17. Ninety-five.

15. Eighty-six. 18. Seventy-three.

27. Reading and Writing Numbers*Examples 1 to 5, oral — Examples 6 to 13, written*

1. How many eggs are 3 eggs and 5 eggs?

2. How many tens are 3 tens and 5 tens?

3. How much is $40 + 50$? $60 + 40$? $20 + 60$?

4. How many cents are 20 cents and 70 cents?

5. Add 7 feet and 3 feet; 70 and 30.

Write in figures and add :

6. Twenty and forty. 10. Sixty and thirty.

7. Ten and seventy. 11. Seventy and twenty.

8. Thirty and ten. 12. Sixty and forty.

9. Forty and thirty. 13. Twenty and sixty.

III. ROMAN NUMERALS

28. Roman Numerals

Examples 1 to 5, oral — Examples 6 to 25, written

1. Read the figures, or numerals, on the clock.
2. Which hand tells the hours? the minutes?
3. How long does it take the hour hand to pass from I to II? How long does it take the minute hand?

IV. ADDITION

Uniting two or more numbers in one number is called *addition*.

The numbers added are called *addends*.

The result of adding numbers is called the *sum*.

The sign of addition is +.

Numbers to be added, and the sum, are usually written one under another, as here $\begin{array}{r} 2 \\ 6 \\ \hline 8 \end{array}$ shown.

Numbers to be added, and the sum, may also be written in this way: $2 + 6 = 8$. We may read this, "2 and 6 are 8," or "2 plus 6 equals 8."

29. Adding 10's

Examples 1 to 4, oral — Examples 5 to 13, written

1. If one boy has 7 marbles and another has 3, how many marbles have they?

2. If a boy picks 4 quarts of berries and his sister picks 3 quarts, how many quarts have they?

3. If there are 7 sparrows on one tree and 2 sparrows on another, how many are on both trees?

4. If I see 5 boys and 3 girls, how many children do I see? Add 5 and 3; 5 tens and 3 tens.

Copy and add:

30. Adding 1's

Examples 1 to 4, oral — Examples 5 to 13, written

1. When we count, "1, 2, 3, 4," what number do we add each time?
2. Add 1 to 10; to 20; to 30; to 40; to 50.
3. What numbers from 1 to 100 end in 1?
4. If you add 1 to a number that ends in 3, the sum will end in what number?

32. Adding 3's*Examples 1 to 4, oral — Examples 5 to 17, written*

- Count by 3's from 3 to 30.
- What numbers from 1 to 100 end in 3?
- Add 3 to each number from 1 to 10.
- If you spend 8 cents and 3 cents, how much do you spend in all? Add 18 and 3.

34. Adding 5's

Examples 1 to 4, oral — Examples 5 to 17, written

1. Count by 5's from 5 to 25.
2. What numbers from 1 to 100 end in 5?
3. Add 5 to each number from 1 to 10.
4. How much will a boy have who adds 5 cents to the 25 cents that he has in his bank?

35. Adding 6's

Examples 1 to 4, oral — Examples 5 to 17, written

1. Count by 6's from 6 to 36.
2. What numbers from 1 to 100 end in 6?
3. Add 6 to each number from 1 to 10.
4. How many days are 4 days and 6 days? 14 days and 6 days? 54 days and 6 days?

36. Adding 7's*Examples 1 to 4, oral — Examples 5 to 17, written*

- Count by 7's from 7 to 28.
- What numbers from 1 to 100 end in 7?
- Add 7 to each number from 1 to 10.
- If I have 3 marbles and you have 7, how many have we together? Add 3 and 7; 13 and 7.

37. Adding 8's*Examples 1 to 4, oral — Examples 5 to 17, written*

- Count by 8's from 8 to 48.
- Add 8 to each number from 1 to 10.  $40 + 8 = 48$
- Add 8 inches to 2 inches; 8 to 12; 8 to 22.
- Add 8 cents to 3 cents; 8 to 13; 8 to 23.

38. Adding 9's

Examples 1 to 4, oral — Examples 5 to 17, written

1. Count by 9's from 0 to 90.
2. Add 9 to each number from 1 to 10.
3. How many feet are 8 feet and 9 feet? 38 feet and 9 feet?
4. Add 7 caps and 9 caps; 17 and 9; 67 and 9.

Copy and add:

40. Addition Table

It is necessary to learn this *Addition Table* so as to tell at once the sum of any two given numbers. Also recite the table aloud, as the teacher tells you.

$1 + 0 = 1$	$2 + 0 = 2$	$3 + 0 = 3$
$1 + 1 = 2$	$2 + 1 = 3$	$3 + 1 = 4$
$1 + 2 = 3$	$2 + 2 = 4$	$3 + 2 = 5$
$1 + 3 = 4$	$2 + 3 = 5$	$3 + 3 = 6$
$1 + 4 = 5$	$2 + 4 = 6$	$3 + 4 = 7$
$1 + 5 = 6$	$2 + 5 = 7$	$3 + 5 = 8$
$1 + 6 = 7$	$2 + 6 = 8$	$3 + 6 = 9$
$1 + 7 = 8$	$2 + 7 = 9$	$3 + 7 = 10$
$1 + 8 = 9$	$2 + 8 = 10$	$3 + 8 = 11$
$1 + 9 = 10$	$2 + 9 = 11$	$3 + 9 = 12$

41. Addition Table

$4 + 0 = 4$	$5 + 0 = 5$	$6 + 0 = 6$
$4 + 1 = 5$	$5 + 1 = 6$	$6 + 1 = 7$
$4 + 2 = 6$	$5 + 2 = 7$	$6 + 2 = 8$
$4 + 3 = 7$	$5 + 3 = 8$	$6 + 3 = 9$
$4 + 4 = 8$	$5 + 4 = 9$	$6 + 4 = 10$

$4 + 8 = 12$	$5 + 8 = 13$	$6 + 8 = 14$
$4 + 9 = 13$	$5 + 9 = 14$	$6 + 9 = 15$

42. Addition Table

$7 + 0 = 7$	$8 + 0 = 8$	$9 + 0 = 9$
$7 + 1 = 8$	$8 + 1 = 9$	$9 + 1 = 10$
$7 + 2 = 9$	$8 + 2 = 10$	$9 + 2 = 11$
$7 + 3 = 10$	$8 + 3 = 11$	$9 + 3 = 12$
$7 + 4 = 11$	$8 + 4 = 12$	$9 + 4 = 13$
$7 + 5 = 12$	$8 + 5 = 13$	$9 + 5 = 14$
$7 + 6 = 13$	$8 + 6 = 14$	$9 + 6 = 15$
$7 + 7 = 14$	$8 + 7 = 15$	$9 + 7 = 16$
$7 + 8 = 15$	$8 + 8 = 16$	$9 + 8 = 17$
$7 + 9 = 16$	$8 + 9 = 17$	$9 + 9 = 18$

This table in Exercises 40 to 42, at first found by counting objects and afterwards learned, is usually known to pupils before they begin using a book. It should now be reviewed thoroughly.

43. Review

Examples 1 to 3, oral — Examples 4 to 15, written

1. Add: $7 + 5$; $6 + 8$; $7 + 7$; $8 + 9$.
2. Add: $6 + 5$; $5 + 8$; $4 + 9$; $9 + 9$.
3. Add: $8 + 7$; $4 + 3$; $5 + 4$; $4 + 8$.

13. $3 + 2 + 5 + 1$. 14. $2 + 0 + 7 + 4$. 15. $6 + 6 + 2 + 1$.

44. Review

Examples 1 to 9, oral — Examples 10 to 12, written

1. How many books are 3 books and 7 books?
13 books and 7 books? 3 books and 17 books?
2. How many dolls are 4 dolls and 8 dolls?
3. How many desks are 6 desks and 7 desks?
16 desks and 7 desks? 6 desks and 17 desks?

Name three numbers whose sum is :

4. 13. 5. 26. 6. 31. 7. 46. 8. 65. 9. 83.
10. If one boy earns 18 cents and another earns 9 cents, how much do they earn together?
11. If you have read 68 pages of a book and have 7 more to read, how many pages are in the book?
12. If a boy weighs 47 pounds and his dog weighs 9 pounds, how much do they both weigh?

To add numbers of two figures, we write ones under ones and tens under tens. We then begin at the right and add each column by itself.

In adding 34 and 53 we find that the sum of the ones is 7, and the sum of the tens is 8. Then the sum of 34 and 53 is 87.

$$\begin{array}{r} 34 \\ 53 \\ \hline 87 \end{array}$$

Always *check* or *prove* the work by adding down as well as up.

47. Adding Two-figure Numbers

Examples 1 to 11, oral — Examples 12 to 27, written

1. How many quarts are 11 quarts and 8 quarts?
2. How many apples are 12 apples and 8 apples?

V. SUBTRACTION

52. Numbers below 10

Examples 1 to 3, oral — Examples 4 to 12, written

1. If I take ○○○ from ○○○○○, how many circles are left?

2. How many circles must I add to 3 circles to make 5 circles?

3. How much must be added to 4 to make 10?

Take the lower number from the upper one :

4.	5.	6.	7.	8.	9.	10.	11.	12.
6	8	7	9	5	3	4	5	8
<u>2</u>	<u>5</u>	<u>4</u>	<u>3</u>	<u>1</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>0</u>

53. Numbers below 10

Example 1, oral — Examples 2 to 9, written

1. How many dots must be added in the right-hand square to make the number under the oblong?

7

8

9

8

Take the lower number from the upper one :

2.	3.	4.	5.	6.	7.	8.	9.
8	6	8	9	9	9	8	9
<u>7</u>	<u>3</u>	<u>6</u>	<u>8</u>	<u>9</u>	<u>7</u>	<u>6</u>	<u>2</u>

Taking one number from another is called *subtraction*. It brings the same result as finding what number must be added to the smaller to make the larger.

The result of subtraction is called the *difference* or *remainder*.

In subtraction we write the smaller number under the larger number, placing the difference beneath.

We may also write $10 - 6 = 4$, and we read this "10 *minus* 6 equals 4," or "10 *less* 6 is 4." "Minus" and "less" mean the same.

54. Subtracting from 10

Examples 1 to 15, oral — Examples 16 to 23, written

1. Take 7 cubes from 10 cubes.
2. Take 3 cubes from 10 cubes.
3. Take 8 cubes from 10 cubes.

Look at the picture above and tell how many cubes must be added to the following to make 10 :

4. 4. 6. 3. 8. 8. 10. 0. 12. 6. 14. 10.
5. 5. 7. 7. 9. 1. 11. 2. 13. 9. 15. $2 + 1$.

55. Subtracting 1's*Examples 1 to 4, oral — Examples 5 to 17, written*

1. Take 1 from each number from 1 to 10.
2. Take 1 from each number from 10 to 20.
3. Count backwards from 10 to 1; from 20 to 10.
4. How much is 90 dollars — 1 dollar? 70 inches less 1 inch? 60 cubes less 1 cube?

Copy and subtract:

5.	6.	7.	8.	9.	10.	11.	12.	13.

14. $52 - 1$. 15. $36 - 1$. 16. $85 - 1$. 17. $99 - 1$.

56. Subtracting 2's*Examples 1 to 5, oral — Examples 6 to 18, written*

1. Take 2 from 10; from 9; from 8; from 7.
2. Take 2 from 6; from 5; from 4; from 3.
3. Count backwards by 2's from 10 to 0.
4. How much is $10 - 2$? $20 - 2$? $50 - 2$?
5. How much is 25 cents — 2 cents?

To subtract numbers of two figures we write ones under ones and tens under tens. We begin at the right to subtract.

In subtracting 34 from 86 we subtract 4 from 6 and write the 2 under the ones. We then subtract 3 from 8 and write the 5 under the tens. Then the remainder is 52.

$$\begin{array}{r} 86 \\ - 34 \\ \hline 52 \end{array}$$

We *check* the work by adding the remainder to the smaller number. The result should be the larger number.

Teachers may use either of the two common plans of subtraction, taking 4 from 6 or thinking of the number which added to 4 makes 6. The latter plan is more commonly used in business. The book is adapted to either plan.

70. Subtracting Two-figure Numbers

VI. MEASURES

73. Length

Examples 1 to 4, oral — Examples 5 to 12, written

1. How many feet are there in 1 yard ?
2. How many feet are there in 1 yard and 2 feet ?
3. How many feet are there in 2 yards ? in 3 yards ?
4. How many inches are there in 1 foot ? in 1 foot and 8 inches ? 1 inch

Add the following :

5.	6.	7.	8.
12 feet	34 inches	42 yards	61 feet
<u>27 feet</u>	<u>22 inches</u>	<u>23 yards</u>	<u>30 feet</u>

Subtract :

9.	10.	11.	12.
63 feet	75 inches	57 yards	68 feet
<u>21 feet</u>	<u>10 inches</u>	<u>22 yards</u>	<u>30 feet</u>

We have learned the following table of length :

$$12 \text{ inches} = 1 \text{ foot}$$

$$3 \text{ feet} = 1 \text{ yard}$$

We write *in.* for inch or inches, *ft.* for foot or feet, *yd.* for yard or yards. Thus we write 2 ft. 6 in. for 2 feet and 6 inches.

Pupils should have much exercise in the use of the various measures. They should make such use of the foot rule and yardstick as to be able to remember clearly their approximate lengths.

74. Money

Examples 1 to 5, oral — Examples 6 to 13, written

1. How many cents in a nickel?
2. Name something that costs a nickel.
3. How many cents in a dime?
4. Name something that costs a dime.
5. How many nickels in a dime?

Add the following :

6.	7.	8.	9.
37 cents	65 cents	50 cents	32 cents
<u>42 cents</u>	<u>31 cents</u>	<u>25 cents</u>	<u>47 cents</u>

Subtract :

10.	11.	12.	13.
48 cents	75 cents	96 cents	86 cents
<u>24 cents</u>	<u>25 cents</u>	<u>75 cents</u>	<u>34 cents</u>

We have learned the following table of money :

5 cents = 1 nickel
10 cents = 1 dime
10 dimes = 1 dollar

We write *ct.* or ¢ for both cent and cents, and \$5 for 5 dollars.

The children should be told that a denomination applied to the first number of a column applies to every number that follows, and that the denomination should be repeated in the answer, as here shown.

\$42	23 ft.
11	12
<u>4</u>	<u>43</u>
\$57	78 ft.

75. Liquid Measure*Examples 1 to 4, oral — Examples 5 to 8, written*

1. How many pints in a quart ?
2. How many pints in 2 quarts ?
3. Name something that is sold by the pint.
4. Name something that is sold by the quart.

Subtract :

5.	6.	7.	8.
\$48	73 ft.	63 quarts	75 pints
<u>15</u>	<u>21</u>	<u>12</u>	<u>25</u>

We have learned that

$$2 \text{ pints} = 1 \text{ quart}$$

We write *pt.* for pint or pints, and *qt.* for quart or quarts.

76. Weight

Examples 1 to 4, oral — Examples 5 to 8, written

1. How many ounces in a pound?
2. Name something that is sold by the pound.
3. Name something that is sold by the ounce.
4. How many ounces in 1 pound and 4 ounces?

Add the following :

5.	6.	7.	8.
70 qt.	12 qt.	\$46	25 ounces
<u>15</u>	<u>21</u>	<u>23</u>	<u>12</u>

We have learned that

$$16 \text{ ounces} = 1 \text{ pound}$$

We write *oz.* for ounce or ounces, and *lb.* for pound or pounds.

VII. FRACTIONS

77. Half of an Object

Examples 1 to 6, oral — Examples 7 to 9, written

1. Into how many equal parts has this apple been divided?

2. Each of these equal parts is called what part of the apple?

3. This rectangle has been cut into how many equal parts?

4. Each of these equal parts is called what part of the rectangle?

5. To take half of this globe, into how many equal parts must I divide it?

6. What do you mean by one half of anything?

7. Draw a line 1 in. long and divide it into halves. How long is each half?

8. Draw a line 2 in. long and divide it into halves. How long is each half?

9. Draw 3 squares 1 in. on a side and divide them by lines into halves in different ways.

We write one half in this way: $\frac{1}{2}$.

Paper folding, drawing, cutting of clay cubes, breaking of crayons, and similar devices should be used whenever necessary.

78. Half of a Group

Examples 1 to 6, oral — Examples 7 and 8, written

1. Into how many equal parts has this group of 6 books been divided? Each part is called what part of all the books?

2. How many apples are $\frac{1}{2}$ of these 8 apples?

3. How many pupils are $\frac{1}{2}$ of these 4 pupils?

4. How many cents are $\frac{1}{2}$ of 6¢?

5. How many dollars are $\frac{1}{2}$ of \$8?

6. How many squares are $\frac{1}{2}$ of these 16 squares?

7. Draw 8 marks and separate them into halves.

8. Make 14 small stars on paper and draw circles around half of them.

Children at this time have not had much work in division. Therefore the idea of *half of a group*, which is different from that of *half of an object*, must be brought out by use of illustrative material.

79. Half as Large

Examples 1 to 7, oral — Examples 8 to 11, written

1. The large block is how many times as large as the small one?

2. The small block is what part as large as the large one?

3. If the large block is 2 in. high, how high is the small one?

4. If the large block is 4 in. high, how high is the small one?

5. If a man is 6 ft. tall and his son is half as tall, how tall is his son?

6. If a table is 6 ft. long and is half as wide, how wide is the table?

7. If one stick is twice as long as another, the short stick is what part as long as the other?

8. Draw a line on paper and draw another line that is half as long.

9. Draw a line 2 in. long and draw another line that is half as long.

10. Draw a square on paper and draw another square that is half as long on each side.

11. Draw a circle on paper and draw another circle that is half as wide.

This exercise brings out the third idea of a fraction. First (page 45) came the idea of *half of an object*; then came (page 46) *half of a group of objects*; now comes the idea of *half as large*.

80. Fourth of an Object

Examples 1 to 6, oral — Examples 7 to 11, written

1. This orange has been divided into 4 equal parts. Each is what part of the orange?

2. A quarter of a dollar is what part of a dollar?

3. Tell me how many quarters of an orange equal half an orange.

4. What two names are there for one of the 4 equal parts of anything?

5. What is meant by $\frac{1}{4}$? How many books are $\frac{1}{4}$ of 4 books?

6. If a line is 4 in. long, how long is a line that has a quarter of this length?

7. Draw a line 2 in. long and mark off $\frac{1}{4}$ of it.

8. Draw a line 4 in. long and mark off $\frac{1}{2}$ of it and also $\frac{1}{4}$ of it.

9. Draw a square 1 in. on a side and divide it into fourths.

10. Draw a circle and divide it into halves; then divide each half into halves.

11. Draw a line 1 in. long and divide it into halves; then divide each half into halves. Do you see that half of a half is a quarter of the whole?

It is not expected that in this review much facility in fractions will be developed. The children have this work in Grades I and II, but the subject is better treated in the regular work of Grade III.

81. One Third

Examples 1 to 8, oral — Examples 9 to 14, written

1. This circle has been divided into how many equal parts?

2. Each of these equal parts is called what part of the circle?

3. If a line is divided into three equal parts, each is called what part of the line?

4. What is one of the three equal parts of anything called?

5. How many feet are there in a yard? Then 1 ft. is what part of a yard?

6. What is meant by $\frac{1}{3}$? How much is $\frac{1}{3}$ of \$3?

7. How much is $\frac{1}{3}$ of 3 in.? $\frac{1}{3}$ of 3 lb.?

8. If a line is 3 yd. long, how long is a line that is $\frac{1}{3}$ of this length?

9. Draw a line 3 in. long and mark off $\frac{1}{3}$ of it.

10. Draw a line 1 in. long. Then draw it so that it is $\frac{1}{2}$ in. longer. Mark off $\frac{1}{3}$ of the whole line.

11. Here are 6 stars separated into 3 equal groups. How many stars are $\frac{1}{3}$ of 6 stars? * * *

12. Draw 9 stars and separate them into 3 equal groups. How many stars are $\frac{1}{3}$ of 9 stars?

13. Draw 12 stars and separate them into 2 equal groups. How many stars are $\frac{1}{2}$ of 12 stars?

14. Draw 12 stars and separate them into 3 equal groups. How many stars are $\frac{1}{3}$ of 12 stars?

82. Review

Examples 1 to 5, oral — Examples 6 and 7, written

1. How many feet are there in $\frac{1}{3}$ yd. ?
2. How many pints are there in $\frac{1}{2}$ qt. ?
3. How many inches are there in $\frac{1}{2}$ ft. ?
4. How many inches are there in $\frac{1}{3}$ ft. ?
5. There are 12 things in a dozen. How many cubes are there in $\frac{1}{3}$ of a dozen cubes ?

6. How many eggs are there in $\frac{1}{3}$ of a dozen eggs ?

7. How many eggs are there in $\frac{1}{4}$ of a dozen eggs ?

CHAPTER II

NUMBERS TO 10,000

I. READING AND WRITING NUMBERS

1. Numbers to 1000

Examples 1 to 7, oral — Example 8, written

1. Here are 4 bundles of 10 splints each. How many splints do you see in all?

Ten 10's make *one hundred*. We

write one hundred and two hundred thus: 100; 200.

2. Each of these 3 bundles contains as many splints as 10 of the bundles of Ex. 1. How many splints are there in each bundle?

We read 352, "three hundred fifty-two." We read 407, "four hundred seven."

Read these numbers:

3. 700. 4. 820. 5. 926. 6. 420. 7. 703.

8. Write in words: 206; 709; 527; 642; 834.

2. Numbers to 1000*Examples 1 to 14, oral — Examples 15 to 18, written*

1. Read aloud: 275; 365; 499; 999; 827.

Read these numbers:

- | | | | | |
|---------|---------|---------|---------|----------|
| 2. 723. | 4. 298. | 6. 888. | 8. 707. | 10. 630. |
| 3. 496. | 5. 964. | 7. 351. | 9. 909. | 11. 590. |

State the sum of:

- 12.
- $800 + 60 + 7$
- . 13.
- $100 + 70$
- . 14.
- $600 + 90$
- .

Write in figures:

- | | |
|--------------------|------------------------------|
| 15. Seven hundred. | 17. Five hundred fifty-five. |
| 16. Nine hundred. | 18. Eight hundred eight. |

3. Numbers to 1000*Examples 1 to 9, oral — Examples 10 to 13, written*

1. Read aloud: 404; 407; 101; 808; 763.

Read these numbers:

2. 999. 3. 620. 4. 505. 5. 345. 6. 800.

State the sum of:

- 7.
- $600 + 35$
- . 8.
- $900 + 63$
- . 9.
- $800 + 4$
- .

Write the sum of:

- | | | |
|--|-----------------|------------------|
| 10. $300 + 3$. | 11. $700 + 9$. | 12. $700 + 32$. |
| 13. Write in words: 555; 101; 321; 123; 909. | | |

4. Thousands

Examples 1 to 9, oral — Examples 10 to 20, written

1. Here is a bundle with 10 hundred splints. We call 10 hundred *one thousand*. How many splints in 2 such bundles?

2. We write one thousand thus: 1000. Read these numbers: 2000; 3000; 4000.

3. Count by thousands from 1 thousand to 10 thousand.

4. How many hundreds are there in 1000? in 2000? in 3000?

Read these numbers:

5. 5000. 6. 6000. 7. 4000. 8. 7000. 9. 2000.

Write in figures:

10. Seven thousand. 12. Six thousand.

11. Nine thousand. 13. Eight thousand.

14. Write all of the thousands from 1 thousand to 9 thousand.

Add the following:

15.	16.	17.	18.	19.	20.
1000	2000	3000	5000	4000	1000
1000	1000	2000	3000	1000	4000
<u>2000</u>	<u>3000</u>	<u>1000</u>	<u>1000</u>	<u>4000</u>	<u>3000</u>

5. Numbers to 10,000

Examples 1 to 14, oral — Examples 15 to 18, written

1. Here are 2000 splints + 300 splints + 40 splints + 2 splints. We write the sum thus: 2342. We read this number thus: two thousand three hundred forty-two. Read these numbers: 2427; 4620; 5307.

Read aloud:

2. 2348. 4. 3949. 6. 2640. 8. 4605. 10. 3092.
3. 3461. 5. 8888. 7. 3750. 9. 5706. 11. 4078.

12. If in 2345 we say that 5 is in units' place, 4 in tens' place, and 3 in hundreds' place, what place shall we say that 2 is in?

13. Name the four places in the number 7543.

14. We may read 1700, "1 thousand 7 hundred" or "17 hundred." State two ways of reading 2500.

Write in figures:

15. One thousand five hundred seventy-six.
16. Two thousand nine hundred fifty-three.
17. Nineteen hundred twelve.
18. Nine thousand nine hundred ninety-nine.

6. Numbers to 10,000

Examples 1 to 9, oral — Examples 10 to 12, written

1. Read aloud: 1301; 2022; 3303; 4444.

Read aloud:

2. Washington was born in 1732.
3. The battle of Bunker Hill was fought in 1775.
4. The Pilgrim Fathers landed in 1620.
5. 1913. 6. 1915. 7. 2400. 8. 2304. 9. 6666.

Write in figures:

10. Seven thousand seven.
11. Eight thousand eight hundred.
12. Six thousand seven hundred eighty.

7. Numbers to 10,000

Examples 1 to 6, oral — Examples 7 to 14, written

1. Read aloud: 1916; 2987; 4281; 7997.

Read aloud:

2. 1912. 3. 1917. 4. 4040. 5. 5005. 6. 6600.

Write in figures:

7. This year.
8. Nineteen hundred fifteen.
9. One thousand nine hundred sixteen.

Write in words:

10. 2007. 11. 2500. 12. 3200. 13. 3750. 14. 6232.

We have studied twelve Roman numerals on clocks. The tens, from ten to one hundred, are as follows :

10 = X	written X
20 = X + X	written XX
30 = X + X + X	written XXX
40 = L - X	written XL
50 = L	written L
60 = L + X	written LX
70 = L + X + X	written LXX
80 = L + X + X + X	written LXXX
90 = C - X	written XC
100 = C	written C

Other numbers are written thus :

19 = X + IX	written XIX
45 = XL + V	written XLV
86 = LXXX + VI	written LXXXVI
99 = XC + IX	written XCIX

8. Roman Numerals

Examples 1 to 5, oral — Examples 6 to 11, written

1. Read aloud : XLIX ; XCII ; LXXXVIII.

Read :

2. XVI. 3. XXV. 4. XLVI. 5. LXIX.

Write in Roman numerals :

6. 37. 7. 49. 8. 63. 9. 94. 10. 77. 11. 84.

II. ADDITION

Uniting two or more numbers in one number is called *addition*.

For other definitions see page 16.

We add 42, 30, and 25 as here shown, adding first the ones, which are called the *units*, and then the tens.

$$\begin{array}{r} 42 \\ 30 \\ \underline{25} \\ 97 \end{array}$$

We add 75 and 62 as here shown. The sum of the units is 7, and the sum of the tens is 13, the total sum being 137.

$$\begin{array}{r} 75 \\ 62 \\ \underline{\quad} \\ 137 \end{array}$$

9. Adding Two-figure Numbers

Examples 1 to 9, oral — Examples 10 to 25, written

1. Add 50 cents and 10 cents.

Add:

2.	3.	4.	5.	6.	7.	8.	9.
81	32	41	37	69	22	35	42
<u>5</u>	<u>7</u>	<u>20</u>	<u>30</u>	<u>20</u>	<u>31</u>	<u>22</u>	<u>21</u>

Copy and add:

10.	11.	12.	13.	14.	15.	16.	17.
22	43	95	97	87	75	78	77
<u>57</u>	<u>33</u>	<u>10</u>	<u>20</u>	<u>41</u>	<u>30</u>	<u>30</u>	<u>50</u>
18.	19.	20.	21.	22.	23.	24.	25.
68	90	96	96	82	67	86	72
<u>31</u>	<u>10</u>	<u>12</u>	<u>30</u>	<u>26</u>	<u>41</u>	<u>42</u>	<u>61</u>

We may add 68 and 57 in either of the following ways, but the second one is always used because it is shorter. The first way explains the second.

In the second plan we think of $7 + 8$ as 15, and we write the units, 5, under units, reserving 1 (ten) to add to the tens.

68 We then think of $5 + 6$ (tens) as 11 (tens) 57 which, with the 1 (ten) from the 15, makes 125 12 (tens). The sum is 125.

$$\begin{array}{r} 68 \\ 57 \\ \hline 15 \text{ sum of units} \\ 11 \text{ sum of tens} \\ \hline 125 \text{ sum of both} \end{array}$$

10. Adding Two-figure Numbers

Examples 1 to 9, oral — Examples 10 to 17, written

1. 7 horses and 61 horses are how many?
2. 8 flies and 16 flies are how many?
3. 27 roses and 30 roses are how many?
4. 35 apples and 20 apples are how many?
5. 24 eggs and 10 eggs are how many?
6. 20 boys and 16 boys are how many?

Add:

7. $30 + 10.$ 8. $30 + 17.$ 9. $32 + 17.$

Copy and add:

10.	11.	12.	13.	14.	15.	16.	17.
30	31	37	56	39	27	45	62
<u>48</u>	<u>48</u>	<u>48</u>	<u>47</u>	<u>86</u>	<u>59</u>	<u>55</u>	<u>78</u>

11. Adding Two-figure Numbers*Examples 1 to 8, oral — Examples, 9 to 15, written*1. Add: $22 + 6$; $23 + 3$; $23 + 3 + 3$.*Add:*

2.	3.	4.	5.	6.	7.	8.
32	33	34	46	59	69	125
<u>7</u>	<u>7</u>	<u>7</u>	<u>8</u>	<u>3</u>	<u>8</u>	<u>5</u>

Copy and add:

9.	10.	11.	12.	13.	14.	15.
57	57	63	75	66	59	47
<u>20</u>	<u>27</u>	<u>29</u>	<u>15</u>	<u>24</u>	<u>28</u>	<u>36</u>

12. Adding Two-figure Numbers*Examples 1 to 3, oral — Examples 4 to 10, written*

1. The score in a game was 2, 5, 0, 3, 4. What was the total score?

2. A boy has 35¢ in a bank. If he puts in 50¢ more, how much will he have?

3. One boy weighs 48 lb. and another 40 lb. How much do they together weigh?

Add:

4.	5.	6.	7.	8.	9.	10.
26	48	72	65	27	32	87
<u>34</u>	<u>52</u>	<u>28</u>	<u>37</u>	<u>65</u>	<u>59</u>	<u>16</u>

14. Adding Two-figure Numbers*Examples 1 to 5, oral — Examples 6 to 14, written*

1. There are 31 days in March and 30 days in April. How many days are there in both together?

2. If you pay 25¢ for a book, 5¢ for a pencil, and 10¢ for some paper, how much do you pay for all?

Add:

3. $27 + 20$. 4. $\$40 + \60 . 5. $37 \text{ ft.} + 20 \text{ ft.}$

Copy and add:

6. $\$56 + \35 . 9. $32 \text{ ft.} + 39 \text{ ft.}$ 12. $29¢ + 48¢$.

7. $\$28 + \49 . 10. $37 \text{ ft.} + 45 \text{ ft.}$ 13. $36¢ + 35¢$.

8. $\$59 + \27 . 11. $64 \text{ ft.} + 36 \text{ ft.}$ 14. $64¢ + 28¢$.

15. Adding Two-figure Numbers*Examples 1 to 4, oral — Examples 5 to 11 written*

1. How many yards are 17 yd. and 11 yd.?

2. How many pounds are 27 lb. and 40 lb.?

3. How many pins are 26 pins and 8 pins?

4. Add: $\$42 + \8 ; $\$42 + \18 ; $43 + 7$; $43 + 17$;
 $55 + 5$; $55 + 15$.

Copy and add:

5.	6.	7.	8.	9.	10.	11.
17	15	39	53	48	29	65
26	36	21	21	17	42	15
<u>32</u>	<u>48</u>	<u>36</u>	<u>19</u>	<u>35</u>	<u>29</u>	<u>20</u>

We add larger numbers in the same way as smaller ones, adding first the units, then the tens, then the hundreds, and so on. Thus find the sum of $148 + 263 + 409$.

$$\begin{array}{r} 148 \\ 263 \\ \hline 409 \\ \hline 820 \end{array}$$

The sum of the units is 20. Since this is 2 tens + 0 units, we write 0 under units and add 2 to the next column. The sum of the tens, with this 2, is 12, or 1 hundred and 2 tens, and we write 2 under tens and add 1 to the next column. The sum of the hundreds, with this 1, is 8, and this we write under hundreds. Hence the sum is 820.

16. Adding Three-figure Numbers

Examples 1 to 5, oral — Examples 6 to 13, written

1. How much is $\$100 + \40 ?
2. How much is $\$200 + \55 ?
3. How much is $\$100 + \200 ?
4. How much is $200 \text{ ft.} + 300 \text{ ft.} + 50 \text{ ft.}$?
5. Add $100 + 200 + 300 + 60 + 6$.

Copy and add:

6.	7.	8.	9.	10.	11.
106	243	129	267	182	302
302	364	208	346	199	269
<u>109</u>	<u>109</u>	<u>411</u>	<u>109</u>	<u>208</u>	<u>197</u>

12. $27 + 36 + 49 + 53$. 13. $36 + 92 + 89 + 70$.

17. Adding Three-figure Numbers*Examples 1 and 2, oral — Examples 3 to 6, written*

1. After the teacher has copied this circle on the blackboard add the number within to the number outside, to which the teacher points.

*Add:*

2. $300 + 400$; $320 + 60$.
3. $125 + 106 + 317 + 62$.
4. $236 + 92 + 129 + 87$.
5. $408 + 69 + 72 + 251 + 200$.
6. $149 + 200 + 51 + 44 + 227$.

18. Adding Three-figure Numbers*Examples 1 to 3, oral — Examples 4 to 9, written*

1. How many apples are 50 apples and 60 apples?
2. How much is a bill for \$30 worth of potatoes and \$70 worth of wheat?
3. How much is a bill for \$125, \$62, \$38, \$175, and \$100?

Copy and add, checking the results:

4.	5.	6.	7.	8.	9.
125	209	108	196	296	212
63	79	296	98	109	156
108	68	129	32	127	189
272	320	300	109	169	225
<u>36</u>	<u>192</u>	<u>75</u>	<u>269</u>	<u>79</u>	<u>142</u>

19. Adding Three-figure Numbers*Examples 1 to 7, oral — Examples 8 to 13, written*

1. If you have \$6 in the bank and put in \$16 more, how much will you have?

Add:

2.	3.	4.	5.	6.	7.
8	18	28	68	88	98
<u>3</u>	<u>3</u>	<u>3</u>	<u>3</u>	<u>3</u>	<u>3</u>
8.	9.	10.	11.	12.	13.
136	257	339	172	289	237
242	162	149	487	290	629
<u>439</u>	<u>198</u>	<u>263</u>	<u>392</u>	<u>499</u>	<u>436</u>

20. Adding Three-figure Numbers*Examples 1 to 3, oral — Examples 4 to 9, written*

- Add 5 to each of these numbers: 17, 27, 37.
- Add 6 to each of these numbers: 16, 26, 36.
- Add 7 to each of these numbers: 19, 29, 39.

Add:

4.	5.	6.	7.	8.	9.
27	128	130	124	128	450
32	254	292	232	372	280
48	126	487	148	541	329
76	193	163	360	629	406
<u>51</u>	<u>237</u>	<u>158</u>	<u>259</u>	<u>300</u>	<u>509</u>

In adding numbers of more than three figures we proceed as with smaller numbers. Thus to add 4296 and 3758 we write the numbers in the usual way, with units under units, tens under tens, and so on.

$$\begin{array}{r} 4296 \\ 3758 \\ \hline 8054 \end{array}$$

Then $8 + 6 = 14$, and we write the 4 under units, and add the 1 to the tens.

The sum of the tens is 14, which with the 1 from the 14 units makes 15 tens. We write the 5 under tens, and add the 1 to the hundreds.

The sum of the hundreds is 9, which with the 1 from the 15 tens makes 10 hundreds. We write the 0 under hundreds, and add the 1 to the thousands.

The sum of the thousands is now $1 + 3 + 4$, or 8. Therefore the sum of 4296 and 3758 is 8054.

21. Adding Four-figure Numbers

Examples 1 to 4, oral — Examples 5 to 9, written

1. Add $1000 + 2000 + 3000 + 1000$.
2. Add $5000 + 2000 + 1000 + 1000$.
3. Add $2000 + 1000 + 100 + 10 + 1$.
4. Add $2000 + 1000 + 200 + 30 + 4$.

Add:

5.	6.	7.	8.	9.
2460	4269	3129	2087	1929
3171	1706	1476	3162	2006
<u>2205</u>	<u>1970</u>	<u>2963</u>	<u>2929</u>	<u>3129</u>

22. Adding Four-figure Numbers*Example 1, oral — Examples 2 to 6, written*1. Add: $8 + 2 + 6 + 4$; $4 + 6 + 1 + 9$.*Copy and add:*

2.	3.	4.	5.	6.
2876	4927	5276	7148	3469
<u>4963</u>	<u>3462</u>	<u>1983</u>	<u>2096</u>	<u>4298</u>

In adding, try to add by groups. Thus in adding this column think of 7 and 3 as 10, and of 8 and 2 as 10. Then read the column thus: 10, 20, 29.

23. Adding Four-figure Numbers*Examples 1 to 9, oral — Examples 10 to 14, written*

1. How old will you be 7 years from now?

Add:

2.	3.	4.	5.	6.	7.	8.	9.

Examples 1 to 5, oral — Examples 6 to 8, written

1. If one boy picks 17 qt. of berries and another picks 9 qt., how many quarts do both pick?

Add rapidly :

2. $27 + 7$. 3. $37 + 7$. 4. $247 + 7$. 5. $3007 + 7$.

6. One load of hay weighs 2247 lb. and another weighs 1986 lb. How much do both weigh?

7. A man saved \$2743 in one year and \$3628 the next year. How much did he save in all?

8. A man paid \$1575 for a lot and \$5865 for building a house. How much did both cost?

25. Adding Four-figure Numbers

Examples 1 to 4, oral — Examples 5 and 6, written

1. If a boy earns 27¢ to-day and 30¢ to-morrow, how much does he earn in both days?

Add rapidly :

2. $1550 + 50$. 3. $2575 + 25$. 4. $3250 + 250$.

5. A triangular lot is 1476 ft. on the first side, 1597 ft. on the second, and 1729 ft. on the third. How far is it around the lot?

6. A man saved the following amounts in six years: \$1755, \$1175, \$1436, \$1865, \$780, \$975. What was the total amount saved?

26. Adding Four-figure Numbers*Examples 1 and 2, oral — Examples 3 to 6, written*

1. If there are 5000 people in one village and 4000 people in another village, how many are there in both villages ?
2. If a man has saved \$3000 and then saves \$2000 more, how much will he have ?
3. If one load of hay weighs 2250 lb. and another weighs 2375 lb., how much do the two loads weigh ?
4. If one load of coal weighs 2475 lb. and another weighs 2325 lb., how much do the two loads weigh ?
5. Add $2496 + 3974 + 987 + 863 + 37 + 63$.
6. Add $1809 + 2291 + 873 + 287 + 76 + 24$.

27. Adding Four-figure Numbers*Examples 1 and 2, oral — Examples 3 to 9, written*

1. If a farm is worth \$4000 and the buildings and stock are worth \$1000, what is the total value ?
2. If a man has \$2000 in the bank and adds \$1000 more, how much will he have ?
3. If a man saved \$1175 last year and saves \$1670 this year, how much does he save in both years ?

III. SUBTRACTION

In subtracting one number from another the larger number is called the *minuend*, the smaller number is called the *subtrahend*, and the result is called the *difference* or *remainder*.

From 67 take 42.

The difference between 7 and 2 is 5, which is written under units. The difference between 6 (tens) and 4 (tens) is 2 (tens), which is written under tens. Hence the remainder is 25.

67	minuend
42	subtrahend
25	remainder

From 62 take 47.

In subtracting units $2 - 7$ is impossible, so we take 1 ten from 6 tens and put it with the 2 units, making 12 units. Then $12 - 7 = 5$ and this 5 is written under units. Then $5 \text{ (tens)} - 4 \text{ (tens)} = 1 \text{ (ten)}$, and this 1 is written under tens. Hence the remainder is 15.

62	minuend
47	subtrahend
15	remainder

This shows the process more completely :

$$\begin{aligned} 62 &= 50 + 12 \\ 47 &= 40 + 7 \\ \hline 10 + 5 &= 15 \end{aligned}$$

The work in addition is checked by adding in the opposite direction.

The work in subtraction is checked by adding the subtrahend and the remainder. If the sum is the minuend, the work should be correct.

28. Subtracting Two-figure Numbers*Examples 1 to 8, oral — Examples 9 to 15, written*

1. A man is 39 years old and his son is 9 years old. How much older is the father than the son ?

<u>29</u>	<u>37</u>	<u>19</u>	<u>76</u>	<u>83</u>	<u>38</u>	<u>29</u>

31. Subtracting Two-figure Numbers*Examples 1 to 3, oral — Examples 4 to 10, written*

1. A lady bought 18¢ worth of sugar and gave 25¢. How much change was due?

2. If you buy a pencil for 4¢ and some paper for 5¢, how much change is due from 25¢?

3. How much is 50¢ - 20¢? 50¢ - 15¢? 70 - 30? 70 - 25? 80 - 50? 80 - 55?

Copy, subtract, and check :

4.	5.	6.	7.	8.	9.	10.
92	93	81	35	40	82	97
<u>76</u>	<u>69</u>	<u>28</u>	<u>19</u>	<u>27</u>	<u>48</u>	<u>69</u>

Let us now consider numbers of three figures. We will take 346 from 624.

Subtracting first the units, $4 - 6$ is impossible, so we take 1 ten from 2 tens and put it with the 4 units, making 14 units. Then $14 - 6 = 8$, and this 8 is written under units.

$$\begin{array}{r} 624 \\ 346 \\ \hline 278 \end{array}$$

Then taking the tens, $1 - 4$ is impossible, so we take 1 hundred from 6 hundreds and put it with the 1 ten, making 11 tens. Then $11 (\text{tens}) - 4 (\text{tens}) = 7 (\text{tens})$, and this 7 is written under tens.

Then taking the hundreds, $5 (\text{hundreds}) - 3 (\text{hundreds}) = 2 (\text{hundreds})$, and this 2 is written under hundreds.

Hence the remainder is 278.

We check the result by adding 346 and 278, the sum being 624, the minuend.

This shows the process more completely:

$$\begin{array}{l} 624 = 600 + 20 + 4 = 500 + 110 + 14 \\ 346 = 300 + 40 + 6 = 300 + 40 + 6 \\ \hline 200 + 70 + 8 = 278 \end{array}$$

Study the following examples :

$$\begin{array}{r} 474 \\ 374 \\ \hline 100 \end{array} \quad \begin{array}{r} 474 \\ 384 \\ \hline 90 \end{array} \quad \begin{array}{r} 474 \\ 368 \\ \hline 106 \end{array} \quad \begin{array}{r} 474 \\ 408 \\ \hline 66 \end{array} \quad \begin{array}{r} 582 \\ 396 \\ \hline 186 \end{array}$$

$$\begin{array}{r} 875 \\ 175 \\ \hline 700 \end{array} \quad \begin{array}{r} 875 \\ 385 \\ \hline 490 \end{array} \quad \begin{array}{r} 875 \\ 367 \\ \hline 508 \end{array} \quad \begin{array}{r} 875 \\ 307 \\ \hline 568 \end{array} \quad \begin{array}{r} 911 \\ 399 \\ \hline 512 \end{array}$$

Required from 307 to subtract 129.

As before, $7 - 9$ is impossible, and we cannot take 1 ten from 0 tens. We therefore take 1 ten from 30 tens, or 300, leaving 29 tens. Then $17 - 9 = 8$, and this 8 is written under units. Then $9 \text{ (tens)} - 2 \text{ (tens)} = 7 \text{ (tens)}$, and this 7 is written under tens. Then $2 \text{ (hundreds)} - 1 \text{ (hundred)} = 1 \text{ (hundred)}$, and this 1 is written under hundreds. Hence the result is 178.

Then $9 \text{ (tens)} - 2 \text{ (tens)} = 7 \text{ (tens)}$, and this 7 is written under tens. Then $5 \text{ (hundreds)} - 1 \text{ (hundred)} = 4 \text{ (hundreds)}$, and this 4 is written under hundreds. Hence the result is 475.

<u> 200</u>	<u> 700</u>	<u>2600</u>	<u>4200</u>	<u> 75</u>	<u> 245</u>

In subtracting numbers of four figures we proceed as with numbers of three figures, as already shown. Thus, to take 2759 from 4826 we proceed thus: $6 - 9$ is impossible, but $16 - 9 = 7$.

$$\begin{array}{r} 4826 \\ - 2759 \\ \hline 2067 \end{array}$$

We have now used 1 from the 2 tens, and we have $1 - 5$, which is impossible. But $11 - 5 = 6$.

We have now used 1 from the 8 hundreds, so we have $7 - 7 = 0$.

We then have $4 - 2 = 2$.

Hence the result is 2067.

Similarly, to subtract 1725 from 5000 we proceed as follows: $10 - 5 = 5$, $9 - 2 = 7$, $9 - 7 = 2$, $4 - 1 = 3$.

$$\begin{array}{r} 5000 \\ - 1725 \\ \hline 3275 \end{array}$$

17. How many gloves in 9 pairs of gloves?

48. Division Table of 2's

Examples 1 to 7, oral — Examples 8 to 11, written

1. How many 2's do you see in 4? $////$

2. How many 2's do you see in 6? $○○○$

3. How many 2's do you see in 8? $****$

4. How many 2's do you see in 10? $●●●●$

5. To divide 4 dots by 2 dots means to see how many times 2 dots are contained in 4 dots. How many times is this?

6. We write 8 divided by 2 in this way: $8 \div 2$. How do we read $10 \div 2$? How do we read $12 \div 2$?

7. Read and learn:

$2 \div 2 = 1$	$12 \div 2 = 6$
$4 \div 2 = 2$	$14 \div 2 = 7$
$6 \div 2 = 3$	$16 \div 2 = 8$
$8 \div 2 = 4$	$18 \div 2 = 9$
$10 \div 2 = 5$	$20 \div 2 = 10$

This table, being merely the inverse of the multiplication table, is easily learned in connection with it. Division may be indicated in three ways. For example, $20 \div 2$ may be written $2 \overline{)20}$ or $\frac{1}{2}$ of 20. The words "divide" and "quotient" should be explained orally. Show by using objects that because $2 \times 3 = 6$ we have both $6 \div 2 = 3$, and $6 \div 3 = 2$, and that $\frac{1}{2}$ of 6 has the same value as $6 \div 2$.

8. We may show that $6 \div 2 = 3$ by placing 6 dots in this way: $●●●$. Show in this way that $12 \div 2 = 6$.

9. In the same way show what $14 \div 2$ equals.

10. Show what $16 \div 2$ and $16 \div 8$ equal.

11. Show what $18 \div 2$ and $18 \div 9$ equal.

$10 \times 8 = 80$	$10 \times 9 = 90$	$10 \times 10 = 100$

Oral reviews should be given frequently, covering all tables.

88. Review of the Division Table

Examples 1 to 9, oral — Examples 10 to 17, written

1. 72 ft. is how many times 9 ft. ?

State rapidly these results :

2. $72 \div 9$. 4. $49 \div 7$. 6. $32 \div 8$. 8. $45 \div 5$.
3. $48 \div 6$. 5. $54 \div 9$. 7. $90 \div 9$. 9. $24 \div 3$.

Write the division tables of :

10. 3's. 12. 5's. 14. 7's. 16. 9's.
11. 4's. 13. 6's. 15. 8's. 17. 10's.

With such review as is necessary in Chapter I, and with such omissions of Chapter II as may be allowed when the classes know part of the multiplication table before studying a book, this may be taken as approximately the end of the first half of Grade III.

V. MULTIPLICATION

We multiply a number of two figures by multiplying first the units and then the tens.

To multiply 21 by 3 we see that $3 \times 1 = 3$; and the 1 being units, we write the product under units. We then see that $3 \times 2 = 6$; and the 2 being tens, we write the product under tens. Hence the product is 63.

$$\begin{array}{r} 21 \text{ multiplicand} \\ 3 \text{ multiplier} \\ \hline 63 \text{ product} \end{array}$$

In the same way we may multiply 40 by 2, and 53 by 3. Here $2 \times 0 = 0$, and $2 \times 4 = 8$. Also $3 \times 3 = 9$, and $3 \times 5 = 15$.

$$\begin{array}{r} 40 \\ 2 \\ \hline 80 \end{array} \quad \begin{array}{r} 53 \\ 3 \\ \hline 159 \end{array}$$

89. Multiplication

Examples 1 to 8, oral — Examples 9 to 16, written

1. What will 10 lb. of sugar cost at 5¢ a pound?

State rapidly these products:

2.	3.	4.	5.	6.	7.	8.
10	11	20	30	10	11	12
<u>2</u>	<u>2</u>	<u>3</u>	<u>2</u>	<u>5</u>	<u>4</u>	<u>3</u>

Copy and multiply:

9.	10.	11.	12.	13.	14.	15.
23	21	42	50	32	41	31
<u>2</u>	<u>4</u>	<u>2</u>	<u>2</u>	<u>4</u>	<u>5</u>	<u>6</u>

16. How many are 2 times 72 children?

90. Multiplication

Examples 1 to 7, oral — Examples 8 to 10, written

1. If each of these boys has 10 marbles, how many have they in all?
2. If each of them should buy 10 more marbles, how many more would they all have?
3. If each of the three boys has 30¢, how much do they all have?

State the answers rapidly :

- | | |
|------------------------|------------------------|
| 4. 2×9 and 3. | 6. 5×7 and 6. |
| 5. 3×8 and 4. | 7. 9×3 and 5. |
8. If each of the three boys has 23 marbles, how many have they in all?
 9. If each has 33¢, how much have they in all?
 10. If each weighs 42 lb., what do they all weigh?

This is one way to multiply 36 by 5. Here we see that 5×6 units are 30 units, and we write 30 so that 0 is under units. Then 5×3 tens are 15 tens, and we write 15 so that 5 is under tens. The total product is 180.

$$\begin{array}{r} 36 \\ 5 \\ \hline 30 \\ 15 \\ \hline 180 \end{array} \quad \begin{array}{l} 5 \times 6 \text{ units} \\ 5 \times 3 \text{ tens} \\ \text{product} \end{array}$$

The above shows the reasons, but a shorter way is always used. Here we see that 5×6 units are 30 units, and we write only the 0 under units, reserving the 3 tens to be added to the tens. Then 5×3 tens are 15 tens, which, with the 3 tens added, make 18 tens. We write 18 tens so that the 8 is in tens' place.

$$\begin{array}{r} 36 \\ 5 \\ \hline 180 \end{array}$$

91. Multiplication

Examples 1 to 8, oral — Examples 9 to 15, written

1. How much is 9×70 ft.?

State rapidly these products:

2.	3.	4.	5.	6.	7.	8.
20	30	60	90	80	50	40
<u>5</u>	<u>4</u>	<u>3</u>	<u>2</u>	<u>2</u>	<u>5</u>	<u>6</u>

Copy and multiply:

9.	10.	11.	12.	13.	14.	15.
35	64	72	83	47	53	94
<u>4</u>	<u>3</u>	<u>4</u>	<u>5</u>	<u>4</u>	<u>3</u>	<u>3</u>

We multiply larger numbers in the same way as shown on page 115. Thus, to multiply 165 by 3 we have:

$3 \times 5 = 15$. Write the 5 under units and add the 1 to the product of tens.

$3 \times 9 = 27$. These are tens. Adding the 1 ten, we have 28 tens. Write the 8 under tens and add the 2 to the product of hundreds.

$3 \times 1 = 3$. These are hundreds. Adding the 2 hundreds, we have 5 hundreds.

Hence the product is 585.

94. Multiplication*Examples 1 to 4, oral — Examples 5 to 11, written*

1. At \$70 each, what will 6 wagons cost?

Find the cost of :

2. 7 oranges at 4¢ each.
 3. 4 lb. of figs at 20¢ a pound.
 4. 2 lb. of candy at 40¢ a pound.

Copy and multiply :

5.	6.	7.	8.	9.	10.
297	308	776	847	1200	1089
<u> 4</u>	<u> 5</u>	<u> 6</u>	<u> 7</u>	<u> 8</u>	<u> 9</u>

11. Add $2 \times \$750$ and $3 \times \$225$.

We see that $5 \times 7 = 7 \times 5$, that $9 \times 6 = 6 \times 9$, and that $8 \times 3 = 3 \times 8$. In the same way we may exchange the numbers of the multiplicand and multiplier without changing the product.

Thus $5 \times 9 = 9 \times 5$, and $5 \times \$9 = 9 \times \5 .

If 1 dictionary costs \$6, what will 48 dictionaries cost? Instead of multiplying \$6 by 48 it is easier to multiply \$48 by 6, the result being the same.

95. Multiplication

2. If 1 ton of coal costs \$6, what will 9 tons cost?
3. If 1 dozen bottles of maple sirup cost \$6, what will 8 dozen bottles cost?
4. If 1 box of oatmeal crackers costs \$4, what will 11 boxes cost?
5. If 1 dozen boxes of comb honey cost \$3, what will 6 dozen boxes cost?
6. If 1 desk costs \$4, what will 36 desks cost?
7. If 1 dozen cans of soup cost \$2, what will 48 dozen cans cost?
8. If 1 dozen jars of meat extract cost \$8, what will 36 dozen jars cost?
9. If 1 dozen cans of lobster cost \$3, what will 24 dozen cans cost?
10. If 1 dozen cans of French peas cost \$4, what will 72 dozen cans cost?

To multiply 235 by 11, we first multiply 235 by 1 (unit) and then by 1 (ten), and add the products.

Multiplying first by 1, we have 235, which we write so that 5 comes under units.

We then multiply by 1 (ten), and we have 235 (tens), which we write so that 5 comes under tens.

The product is then 2585.

The usual work is shown at the left, the explanation at the right.

 9. 345. 11. 501. 13. 721. 15. 199. 17. 356.

To multiply 326 by 12, we first multiply 326 by 2 and then by 1 (ten), and add the products.

Multiplying 326 by 2, we have 652, which we write so that 2 comes under units.

Multiplying by 1 (ten), we have 326 (tens), which we write so that 6 comes under tens.

The product is then 3912.

The usual work is shown at the left, the explanation at the right.

10. At \$175 a month, what will a man earn in 12 months?

VI. DIVISION

We have learned that $10 \div 2$ means that we are to find how many 2's there are in 10. We write $10 \div 2 = 5$, and we read this, "Ten divided by 2 equals 5." ●●●●
●●●●

The number divided is called the *dividend*. In this example 10 is the dividend.

The number by which we divide is called the *divisor*. In this example 2 is the divisor.

The result in division is called the *quotient*.

We usually write the work in division as $2 \overline{)10}$ in this example. 5

We have learned that $\frac{1}{2}$ of 10 equals $10 \div 2$.

Some teachers prefer to write the quotient above, as in long division. This may be done if desired, but it is not the business custom.

98. Division

8. At \$3 each, how many school desks can be bought for \$24?

9. At \$7 each, how many rocking-chairs can be bought for \$49?

10. At \$8 each, how many teachers' desks can be bought for \$48?

To divide 693 by 3, we divide first the hundreds, then the tens, and then the units.

Dividing, we have 231.

$$\begin{array}{r} 3 \overline{)693} \\ \underline{231} \end{array}$$

To tell if the work is correct we may *check* it by multiplying the quotient by the divisor. Here we have $3 \times 231 = 693$, so the work is right.

In the same way we may divide 360 by 3, the quotient being 120.

$$\begin{array}{r} 3 \overline{)360} \\ \underline{120} \end{array}$$

To divide 43 by 5, we see that 5 is not contained in the 4 of tens' place. We then pass to the units, and $5 \overline{)43}$ 8, with 3 remainder we see that 5 is contained in 43, because $5 \times 8 = 40$. Therefore the quotient is 8, and there is a *remainder* of 3.

The dividend always equals the product of the divisor and quotient, with the remainder added.

17. How many times can we take 5 marbles out of a bag of 37 marbles, and how many will remain?

To divide 438 by 5, we see that 5 is not contained in the 4 of hundreds' place. We then pass to the tens, and we see that

$$\begin{array}{r} 5 \overline{)438} \\ \underline{87} \\ 3 \end{array}$$

5 is contained in 43, the quotient being 8 and the remainder 3. This remainder being tens, we add 3 tens to the 8 units and divide 38 by 5. The quotient is 7 and the remainder is 3. Hence the whole quotient is 87 and the remainder is 3.

This may be explained like this :

$$\begin{array}{r} 5 \overline{)40 \text{ tens} + 35 \text{ units} + 3} \\ \underline{8 \text{ tens} + 7 \text{ units}} \\ 3 \text{ remainder} \end{array}$$

118. The Farm

Examples 1 to 6, oral — Examples 7 to 12, written

1. How many sheep are 20 sheep and 30 sheep?
2. How many cows are 70 cows less 20 cows?
3. A horse cost \$125 and was sold for \$5 more.
For how much was it sold?
4. A horse cost \$130 and was sold for \$10 less.
For how much was it sold?
5. A wagon costs \$75 and the buyer pays all but \$10. How much does he pay, and how much does he still owe?
6. A farmer has to build 60 ft. of fence. He has built 40 ft. of it. How much has he yet to build?
7. A farmer has 396 trees in an orchard. He has sprayed $\frac{1}{4}$ of them to keep the worms off. How many trees has he sprayed?
8. A farmer has 84 cows and decides to sell $\frac{1}{4}$ of them. How many cows does he sell?
9. If a farm wagon costs \$65, and the horses cost \$325, and the harness costs \$60, how much do they all cost together?
10. A pine tree on a farm is 75 ft. high, and this is 5 times as high as a young cherry tree. How high is the cherry tree?
11. A square field is 66 ft. on each side. How far is it around the field?
12. It is 288 ft. around a certain square field. What is the length of each side?

VIII. MEASURES

TABLE OF LENGTH

12 inches (in.) = 1 foot (ft.)

3 feet = 1 yard (yd.)

This table was studied on page 41, and is now reviewed.

119. Table of Length

Examples 1 to 7, oral — Examples 8 to 19, written

1. How many feet in 1 yd.? in 2 yd.? in $\frac{1}{3}$ yd.?
2. How many inches in 1 ft.? in 3 ft.? in $\frac{1}{2}$ ft.?
3. How many yards in 3 ft.? in 6 ft.? in 9 ft.?
4. How many feet are 12 ft. and 10 ft.?
5. How many yards are 15 yd. — 9 yd.?
6. How many feet in 3 yd.? in 9 yd.?
7. If a schoolroom is 18 ft. wide, how many yards wide is it?

Copy and add :

A square that is 1 in. on a side is a *square inch*. A square that is 1 ft. on a side is a square foot. A square that is 1 yd. on a side is a square yard. We write 1 square inch like this: 1 sq. in.

If a rectangle is 4 in. long and 2 in. wide, its area is 8 sq. in. There are 2 rows, with 4 sq. in. in a row; that is, there are 2×4 sq. in. We say that such a rectangle is 2 in. by 4 in.

120. Square Inches

Examples 1 to 6, oral — Examples 7 to 12, written

1. If a rectangle is 3 in. long and 2 in. wide, how many square inches has it?
2. If a schoolroom is 10 yd. long and 7 yd. wide, how many square yards has it?

Find the areas of rectangles as follows :

- | | |
|--------------------|---------------------|
| 3. 2 in. by 8 in. | 7. 9 ft. by 37 ft. |
| 4. 3 in. by 10 in. | 8. 8 ft. by 29 ft. |
| 5. 7 ft. by 8 ft. | 9. 9 ft. by 27 ft. |
| 6. 9 ft. by 10 ft. | 10. 7 ft. by 19 ft. |
11. Find the area of a floor 19 ft. by 11 ft.
 12. If a playground is 48 yd. long and 9 yd. wide, how many square yards has it?

A square that is 3 ft. on a side contains 3×3 square feet, or 9 square feet.

A square that is 12 in. on a side contains 12×12 sq. in., or 144 sq. in.

144 square inches (sq. in.) = 1 square foot (sq. ft.)

9 square feet = 1 square yard (sq. yd.)

121. Square Measure

Examples 1 to 3, oral — Examples 4 to 16, written

1. How many square feet in 3 sq. yd.?
2. How many square yards in 18 sq. ft.?
3. A strip of carpet is 9 yd. long and 1 yd. wide.
How many square yards has it?

Find the number of square feet in a rectangle that is:

- | | |
|--------------------|----------------------|
| 4. 9 ft. by 38 ft. | 8. 11 ft. by 64 ft. |
| 5. 8 ft. by 46 ft. | 9. 11 ft. by 48 ft. |
| 6. 7 ft. by 29 ft. | 10. 12 ft. by 25 ft. |
| 7. 8 ft. by 34 ft. | 11. 12 ft. by 36 ft. |

Find the number of square inches in:

- | | | |
|---------------|---------------|----------------|
| 12. 2 sq. ft. | 13. 5 sq. ft. | 14. 11 sq. ft. |
|---------------|---------------|----------------|
15. The top of a box is a square that is 11 in. on each side. What is the area of the top?
 16. A pane of glass is 11 in. by 12 in. What is its area?

TABLE OF MONEY

10 cents (¢ or ct.) = 1 dime (d.)

10 dimes = 1 dollar (\$)

100 cents = 1 dollar

The 5-cent piece is often called a nickel.

Since there are 100 cents in \$1, we may write \$2 for 200¢, \$3 for 300¢, and so on.

122. Table of Money

Examples 1 and 2, oral — Examples 3 to 8, written

- How many cents in \$2? in \$3? in \$9?
- How many dollars in 100¢? in 200¢? in 600¢?

Copy and subtract:

3.	4.	5.	6.	7.	8.
\$825	\$675	\$525	\$620	\$700	\$900
<u>120</u>	<u>105</u>	<u>275</u>	<u>245</u>	<u>125</u>	<u>637</u>

123. Table of Money

Examples 1 to 5, oral — Examples 6 to 11, written

- How many cents in \$5? in \$8? in \$10?
- How many dollars in 300¢? in 500¢? in 900¢?
in 1000¢?

- | | | |
|-----------------|-----------------------|----------------------|
| 3. \$29 + \$38. | 6. $9 \times \$755.$ | 9. $\$2772 \div 4.$ |
| 4. \$40 + \$65. | 7. $11 \times \$863.$ | 10. $\$3115 \div 5.$ |
| 5. \$96 + \$99. | 8. $12 \times \$675.$ | 11. $\$4050 \div 9.$ |

We write \$2 and 25¢ thus: \$2.25. The point placed between dollars and dimes is a *decimal point*.

We work with such numbers in the usual way:

$$\begin{array}{r}
 \$2.25 \\
 + 5.96 \\
 \hline
 \$8.21
 \end{array}
 \qquad
 \begin{array}{r}
 \$8.21 \\
 - 5.96 \\
 \hline
 \$2.25
 \end{array}
 \qquad
 \begin{array}{r}
 \$2.25 \\
 \times 5 \\
 \hline
 \$11.25
 \end{array}
 \qquad
 \begin{array}{r}
 5 \overline{) \$11.25} \\
 \underline{ \$ 2.25} \\
 0.00
 \end{array}$$

We write \$0.35 for no dollars and 35 cents, and we read it "thirty-five cents."

124. Table of Money

Examples 1 to 3, oral — Examples 4 to 12, written

1. Read these: \$3.75, \$4.50, \$12.60, \$6.25.
2. Read these: \$1.05, \$125.50, \$275.60, \$2000, \$2000.00, \$300.00, \$100.01.
3. Read these: 25¢, \$0.25, \$0.75, \$0.10, \$0.05, \$0.90, \$0.99, \$0.01, \$0.12½.

Write in figures:

4. Two dollars and one cent.
5. Three dollars and fifteen cents.
6. Seven dollars and eighty-five cents.
7. Five hundred ten dollars and six cents.
8. Add \$3.75 and \$4.67.
9. From \$275.50 take \$168.49.
10. Multiply \$3.85 by 7.
11. Divide \$27.75 by 5.
12. Add \$2.60, \$4.75, \$9.27, and \$0.25.

125. Table of Money*Examples 1 to 4, oral — Examples 5 to 11, written*

1. Add \$300 and \$250; \$700 and \$300.
2. From \$75 take \$50; from \$750 take \$500.
3. Multiply \$200 by 4; by 3; by 5.
4. Divide \$14 by 7; \$140 by 7; \$35 by 7.

IX. FRACTIONS

We shall now study more about fractions.

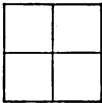

This line is 1 in. long. It is divided into 4 equal parts. Each part is $\frac{1}{4}$ of the line, or $\frac{1}{4}$ of an inch. This is written $\frac{1}{4}$ in.

This line is 1 in. long. It is divided into 3 equal parts. Each part is $\frac{1}{3}$ in. long.

This square has been divided into 4 equal parts. Each of the small squares is $\frac{1}{4}$ of the large square.

One fourth is also called a quarter. One fourth of \$1 is a quarter of a dollar.

136. Writing Fractions

Examples 1 to 4, oral — Examples 5 to 10, written

1. Look at the first line and see how many fourths of an inch there are in an inch.
2. See how many fourths of an inch make $\frac{1}{2}$ in.
3. How many fourths make $\frac{1}{2}$ of the square?
4. We write 3 fourths thus: $\frac{3}{4}$. How do we write 1 third? How should we write 2 thirds?
5. Draw a line $\frac{3}{4}$ of an inch long.

Write these fractions :

- | | |
|--|-----------------|
| 6. One third. | 8. Two fourths. |
| 7. Three fourths. | 9. Two thirds. |
| 10. How many eggs in $2\frac{1}{4}$ doz. eggs? | |

137. The Half*Examples 1 to 5, oral — Examples 6 to 12, written*

1. Which column is $\frac{1}{2}$ of 12? 2
2. Which column is $\frac{1}{2}$ of 4? 2 2
3. Which column is $\frac{1}{4}$ of 8? 2 2 2
4. Which column is $\frac{2}{4}$ of 8? 2 2 2 2
- $\frac{1}{2}$ of 8? 2 2 2 2
5. By what do you divide to $\frac{2}{2}$ $\frac{2}{4}$ $\frac{2}{6}$ $\frac{2}{8}$ $\frac{2}{10}$ $\frac{2}{12}$
find $\frac{1}{2}$ of a number?
6. Copy and learn: $\frac{1}{2} = \frac{2}{4}$; $\frac{1}{2} + \frac{1}{2} = 1$; $\frac{2}{2} = 1$.
7. Draw a line 1 in. long and mark off $\frac{1}{2}$ of it.

Find $\frac{1}{2}$ of:

8. 720. 9. 642. 10. 396. 11. \$1440. 12. \$2334.

138. The Third*Examples 1 to 6, oral — Examples 7 to 12, written*

1. Which column at the top of the page is $\frac{1}{3}$ of 6?
2. Which column is $\frac{2}{3}$ of 6?
3. Which column is $\frac{1}{3}$ of 12?
4. Which column is $\frac{2}{3}$ of 12?
5. Show that $\frac{1}{3}$ of 12 and $\frac{2}{3}$ of 12 is 12.
6. If a lady buys 15 yd. of cloth and uses $\frac{1}{3}$ of it,
how many yards does she use?
7. Copy and learn: $\frac{1}{3} + \frac{2}{3} = 1$; $\frac{3}{3} = 1$.

Find $\frac{1}{3}$ of:

8. 420. 9. 636. 10. 459. 11. \$1110. 12. \$2202.

139. The Fourth*Examples 1 to 4, oral — Examples 5 to 15, written*

1. One half equals how many fourths?

2. How many small squares in $\frac{3}{4}$ of the large square?

3. How many small squares in the large square? How many fourths make 1?

4. What name do we give to a quarter of a gallon?

5. Copy and learn: $\frac{2}{4} = \frac{1}{2}$; $\frac{1}{4} + \frac{3}{4} = 1$; $\frac{4}{4} = 1$.*Find $\frac{1}{4}$ of:*

7. 168. 9. 284. 11. 724 ft. 13. \$1680. 15. \$4884.

140. The Fifth*Examples 1 to 3, oral — Examples 4 to 10, written*

1. How many fifths of the circle in the circle?

We write one fifth thus: $\frac{1}{5}$.2. Read: $\frac{1}{5}$ and $\frac{1}{5}$ are $\frac{2}{5}$.3. How much is $\frac{1}{5}$ of the circle and $\frac{4}{5}$ of the circle?4. Copy and learn: $\frac{1}{5} + \frac{4}{5} = 1$; $\frac{5}{5} = 1$.*Find $\frac{1}{5}$ of:*

5. 25. 6. 250. 7. 355 ft. 8. \$475. 9. \$6250.

10. If a grocer has 5 doz. cans of corn and sells $\frac{2}{5}$ of them, how many single cans does he sell?

141. The Fifth

Examples 1 to 6, oral — Examples 7 to 11, written

1. How much is $\frac{1}{5}$ of 5?
2. How much is $\frac{2}{5}$ of 5?
3. How much is $\frac{3}{5}$ of 5?
4. How much is $\frac{4}{5}$ of 5?
5. If we call the largest column 1, what shall we call each of the others?

6. If we call the largest column 50, what shall we call each of the others?

Find $\frac{1}{5}$ of :

7. 725. 8. 685. 9. 925. 10. \$7500. 11. \$6800.

142. The Sixth

Examples 1 to 9, oral — Examples 10 to 15, written

1. How many dots are $\frac{1}{6}$ of 12 dots? ●●●●●●

State the number of dots in :

2. $\frac{2}{6}$ of 12 dots ; $\frac{1}{3}$ of 12 dots. 6. $\frac{1}{6}$ of 6 dots.
 3. $\frac{3}{6}$ of 12 dots ; $\frac{1}{2}$ of 12 dots. 7. $\frac{2}{3}$ of 6 dots.
 4. $\frac{4}{6}$ of 12 dots ; $\frac{2}{3}$ of 12 dots. 8. $\frac{3}{6}$ of 6 dots.
 5. $\frac{5}{6}$ of 12 dots ; $\frac{5}{6}$ of 12 dots. 9. $\frac{5}{6}$ of 6 dots.
10. Copy and learn: $\frac{3}{6} = \frac{1}{2}$; $\frac{4}{6} = \frac{2}{3}$; $\frac{1}{6} + \frac{5}{6} = 1$; $\frac{6}{6} = 1$.

Find $\frac{1}{6}$ of :

11. 72. 12. 720. 13. 1320 ft. 14. \$2520. 15. \$3240.

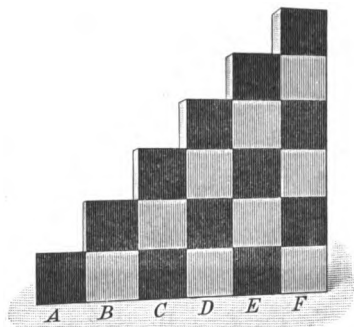

143. The Sixth

Examples 1 to 3, oral — Examples 4 to 11, written

1. If column *F* is called 1, what fraction shall we call column *A*?

2. What shall we then call *B*?

3. And what shall we call *C*, and *D*, and *E*?

Find $\frac{1}{6}$ of:

- | | | | |
|----------|------------|------------|------------|
| 4. 1248. | 6. 1746. | 8. 342 ft. | 10. 2 doz. |

State the number of ounces in :

2. $\frac{1}{8}$ lb. 3. $\frac{3}{4}$ lb. 4. $\frac{3}{8}$ lb. 5. $\frac{5}{8}$ lb. 6. $\frac{7}{8}$ lb.
7. If a man has \$1840 and spends $\frac{1}{4}$ of it, how much does he spend? How much has he left?
8. How many gallons in 4 qt.? How many gallons of maple sirup will fill 196 quart jars?
9. A man having \$9720 invested $\frac{1}{3}$ of it in a lot, $\frac{1}{2}$ of it in a house, and $\frac{1}{4}$ of it in furniture. How much had he left?

If we divide 125 by 4, the quotient is 31 and the remainder is 1. This 1 is still to be divided by 4, so the complete quotient is $31\frac{1}{4}$.

$$\begin{array}{r} 4 \overline{)125} \\ \underline{31\frac{1}{4}} \end{array}$$

If we divide 245 by 8, the quotient is 30 and the remainder is 5. The complete quotient is written $30\frac{5}{8}$.

$$\begin{array}{r} 8 \overline{)245} \\ \underline{30\frac{5}{8}} \end{array}$$

180. General Review

Examples 1 to 8, oral — Examples 9 to 17, written

1. If I add 20 to 34, what is the sum?
2. If I take 40 from 96, what is left?
3. How much is 7×20 ? 7×21 ?
4. How much is $63 + 7$? $630 \div 7$?
5. What is $\frac{1}{2}$ of 24? $\frac{1}{3}$ of 24? $\frac{1}{4}$ of 24? $\frac{1}{8}$ of 24?
6. What is $\frac{1}{3}$ of 33? $\frac{2}{3}$ of 33? $\frac{1}{3}$ of 27? $\frac{2}{3}$ of 27?
7. Make up a problem, using the sum of 25¢ and 12¢, and then solve the problem.
8. In a basket there are 1 doz. eggs. How many eggs will there be if I add $\frac{1}{2}$ doz. more?
9. How far is it around a schoolroom that is 30 ft. long and 20 ft. wide?
10. If you have read 172 pages of a book of 200 pages, how many more have you to read?
11. At \$3 each, how many lamps can be bought for \$33?
12. At \$2 each, how many sleds can be bought for \$24?
13. At \$34 a dozen, what will 4 doz. chairs cost?
14. At \$22 a dozen, what will $\frac{1}{2}$ doz. hats cost?
15. At 95¢ a bushel, what will 12 bu. of wheat cost?
16. A man buys 7 chairs at \$2.50 each, and a table for \$12. What does he pay for all?
17. A man buys 8 bu. of wheat at 96¢ a bushel and \$37.25 worth of hay. What does he pay for both?

CHAPTER III

NUMBERS TO 1,000,000

I. READING AND WRITING NUMBERS

1. Counting by 10,000's

Examples 1 to 17, oral — Examples 18 to 23, written

1. Count by hundreds from 1 hundred to 10 hundred.
2. Count by thousands from 1 thousand to 10 thousand.
3. What is the largest number of four figures?
4. We write 10 thousand thus: 10,000. How many figures are used? How many figures to the right of the comma?
5. Read the numbers: 10,000; 20,000; 30,000.

Read the following:

6. 40,000. 9. 90,000. 12. 15,000. 15. 72,000.
7. 50,000. 10. 80,000. 13. 25,000. 16. 87,000.
8. 70,000. 11. 60,000. 14. 12,000. 17. 100,000.

Write in figures:

18. 20 thousand. 20. 13 thousand. 22. 99 thousand.
19. 70 thousand. 21. 87 thousand. 23. 100 thousand.

174 READING AND WRITING NUMBERS

2. Numbers to 100,000

Examples 1 to 13, oral — Examples 14 to 17, written

1. Read these numbers: \$36,000; \$24,500.

Read the following:

2. 225. 5. 61,225. 8. 39,879. 11. 99,000.
3. 1225. 6. 45,375. 9. 57,621. 12. 99,999.
4. 21,225. 7. 62,564. 10. 72,067. 13. 100,000.

Write in figures:

14. 65 thousand 7 hundred 56.
15. 72 thousand 6 hundred 72.
16. 98 thousand 7 hundred 65.
17. Ninety-nine thousand seven hundred one.

3. Numbers to 100,000

Examples 1 to 9, oral — Examples 10 to 14, written

1. Read these numbers: \$29,475; \$63,002.

Read the following:

2. 70,007. 4. 20,202. 6. 33,033. 8. 90,900.
3. 60,009. 5. 40,040. 7. 44,044. 9. 87,870.

Write in figures:

10. One thousand two.
11. Eleven thousand one.
12. Seventy thousand seventy.
13. Fifty-five thousand fifty-five.
14. Ninety-nine thousand nine hundred ninety.

4. Counting by 100,000's*Examples 1 to 9, oral — Examples 10 to 18, written*

1. Read these numbers: \$100; 100 ft.; 100,000.

Read the following:

2. 200 ft. 4. 500 yd. 6. 600,000. 8. 800,000.

3. 200,000. 5. 500,000. 7. 700,000. 9. 900,000.

Write in figures:

10. 300 thousand.

14. 500 thousand.

11. 700 thousand.

15. 800 thousand.

12. 400 thousand.

16. 600 thousand.

13. 200 thousand.

17. 900 thousand.

18. Add \$100 and \$200; 100,000 and 200,000.

5. Numbers to 1,000,000*Examples 1 to 9, oral — Examples 10 to 19, written*

1. Read these numbers: \$250; 250 ft.; 250,000.

Read the following:

2. 350,000. 4. 225,000. 6. 111,000. 8. 642,000.

3. 150,000. 5. 375,000. 7. 505,000. 9. 237,000.

Write in figures:

10. 275 thousand.

15. 365 thousand.

11. 296 thousand.

16. 509 thousand.

12. 463 thousand.

17. 750 thousand.

13. 260 thousand.

18. 876 thousand.

14. 307 thousand.

19. 999 thousand.

6. Numbers to 1,000,000*Examples 1 to 5, oral — Examples 6 to 11, written*

1. Read these numbers: \$800,000; \$900,000; \$1,000,000. We call a thousand thousand by the name *million*, and we write it thus: 1,000,000.

Read the following :

2. 276,842. 3. 478,926. 4. 999,999. 5. 1,000,000.

Write in figures :

6. 242 thousand. 9. 700 thousand 7.
 7. 376 thousand 6. 10. 888 thousand 88.
 8. 498 thousand 80. 11. 123 thousand 456.

7. Roman Numerals*Examples 1 to 6, oral — Examples 7 to 14, written*

1. What letters are used in writing Roman numerals from one to one hundred?

Read the following :

2. XXIV. 3. XLVI. 4. LXIX. 5. XC. 6. XCIV.

We use D for 500 and M for 1000. We write the hundreds from 200 to 900 thus: CC, CCC, CD, D, DC, DCC, DCCC, CM or DCCCC.

Write in common figures :

7. D. 9. DCLI. 11. CD. 13. MCMXX.
 8. DL. 10. DCCV. 12. CMIV. 14. MDCCCXX.

II. ADDITION

8. Addition to 1000

Examples 1 to 3, oral — Examples 4 to 9, written

1. If you spend 20¢ for a ball and 45¢ for a bat, how much do you spend for both?

2. If you save 25¢, 50¢, and 5¢, how much do you save in all?

3. Add 20¢, 50¢, and 30¢. To the sum add \$1.

Copy and add :

15. Addition

Examples 1 to 3, oral — Examples 4 to 13, written

1. Add a and b in I; also in II.
2. Add a and c in I; also in II.
3. Add b and c in I; also in II.

Add in I:

4. d and e .
5. e, f , and g .
6. g, h , and i .
7. d, e, f, g .
8. f, g, h, i .
9. All of I.

III. SUBTRACTION

16. Subtraction

Examples 1 to 3, oral — Examples 4 to 8, written

1. A man has 60 chickens and sells 40 of them. How many are left? How much is $60,000 - 40,000$?

2. A man has \$90 and spends \$50. How much has he left? How much is $90,000 - 50,000$?

3. How much is $250,000 - 30,000$?

Copy and subtract :

17. Subtraction

Examples 1 to 9, oral — Examples 10 to 14, written

1. From \$2 make change for \$1.35, thus: \$1.35 and 5 (cents) are \$1.40, and 10 (cents) are \$1.50, and 50 (cents) are \$2. The change is, then, 65¢.

From \$2 make change for these purchases :

2. \$1.50.	4. \$1.25.	6. \$1.68.	8. \$1.06.
3. \$1.75.	5. \$1.32.	7. \$1.83.	9. \$1.03.

19. Subtraction

Examples 1 to 9, oral — Examples 10 to 15, written

1. From \$10 make change for a \$6.50 purchase.

From \$10 make change for these purchases :

2. \$9.50. 4. \$9.25. 6. \$7.50. 8. \$8.40.
3. \$9.75. 5. \$8.50. 7. \$8.75. 9. \$6.65.

10. A man bought a farm for \$6750 and sold it for \$8200. How much did he gain?

Copy and subtract :

20. Subtraction

Examples 1 and 2, oral — Examples 3 to 13, written

1. From \$4 make change for a \$3.50 purchase.
2. Also for purchases of \$3.75, \$3.21, \$3.06.

Copy and subtract :

3.	4.	5.	6.	7.

13. From 5280 ft. take 1760 ft.

21. Subtraction

Examples 1 to 5, oral — Examples 6 to 10, written

1. How much more is \$2500 than \$1800?
2. How much less is \$2500 than \$3200?
3. How much greater than 250 ft. is 500 ft.?
4. How much less than 750 ft. is 500 ft.?
5. Make a problem about $725 - 125$, and solve it.

Copy and subtract :

11. A man had \$68.75 in the bank and drew out \$29.87. How much had he left?

12. Pikes Peak is 14,147 ft. high. Mt. Washington is 6288 ft. high. How much higher is Pikes Peak than Mt. Washington?

13. Make a problem about $4126 - 3685$, and solve it.

14. The population of a city is now 157,275. It has gained 49,396 in ten years. What was it ten years ago?

15. If a man has \$254.26 in the bank and draws out \$27.60 and \$32.75, how much has he left?

16. If a man has \$348.25 in the bank and draws out \$32.50, \$49.62, and \$166.13, how much has he left?

IV. MULTIPLICATION

23. Multiplying by 10

Examples 1 to 11, oral — Examples 12 to 26, written

1. Recite the multiplication table of 10's.

24. Multiplying by 10

Examples 1 to 9, oral — Examples 10 to 19, written

1. What will 25 tables cost at \$10 each?
2. What will 10 cows cost at \$45 each?
3. Multiply by 10: \$2; \$0.10 or 10¢; \$2.10.
4. In multiplying \$2.10 by 10, what must be done with the period between dollars and dimes?

Multiply by 10 :

5. \$2.50.	10. \$175.50.	15. \$312.05.
6. \$3.70.	11. \$225.75.	16. \$1245.00.

9. \$15.00.	14. \$217.45.	19. \$2875.05.

To multiply 36 by 20, we multiply 36 by 2 and annex 0, arranging the work as here shown.

$$\begin{array}{r} 36 \\ 20 \\ \hline 720 \end{array}$$

To multiply a number by 10, we annex 0 to the number and move the decimal point, if there is one, one place to the right, thus :

$$10 \times 575 = 5750. \quad 10 \times \$5.75 = \$57.50.$$

To multiply 42 by 300, we multiply 42 by 3 and annex two zeros, arranging the work as here shown.

$$\begin{array}{r} 42 \\ 300 \\ \hline 12600 \end{array}$$

To multiply a number by 100, we annex two zeros to the number and move the decimal point, if there is one, two places to the right, thus :

$$100 \times 575 = 57,500, \quad 100 \times \$5.75 = \$575.00.$$

To multiply 325 by 21, we first multiply by 1 and then by 2 (tens), adding the products, as here shown.

$$\begin{array}{r} 325 \\ 21 \\ \hline 325 \end{array}$$

We see that $1 \times 325 = 325$, and we write the 5 under units.

$$\begin{array}{r} 650 \\ \hline 6825 \end{array}$$

We see that $2 \times 325 = 650$, and since we are multiplying by tens, we write the 0 under tens.

The product is 6825.

$$\begin{array}{r} 406 \\ 68 \\ \hline 3248 \end{array}$$

To multiply 406 by 68, we first multiply by 8 and then by 6 (tens), adding the products, as here shown.

$$\begin{array}{r} 3248 \\ 2436 \\ \hline 27608 \end{array}$$

To multiply 392 by 136, we first multiply by 6, the product being 2352. We then multiply by 3 (tens), the product being 1176 (tens), and we place the right-hand figure in tens' place. We then multiply by 1 (hundred), and place the right-hand figure in hundreds' place.

$$\begin{array}{r}

18. Make a problem about $75 \times \$6.75$, and solve it.
19. What will 16 mowing machines cost at \$42.50 each?

To multiply 487 by 604, we first multiply by 4, the product being 1948. Since we multiplied by units, we place the right-hand figure in units' place. When we multiply by 0, we get only 0, so we do not write this product. When we multiply by 6 (hundreds), we have 2922 for the product, and this we write so that the right-hand figure comes under hundreds. The result is 294,148.

$$\begin{array}{r}

V. DIVISION

42. Division by 10*Examples 1 to 6, oral — Examples 7 to 22, written*

1. How many 10's in 20? in 30? in 40?

Divide by 10:

2. 40. 3. 90. 4. 520. 5. 640. 6. 730.

Copy and divide by 10:

7. 750. 11. 4860. 15. \$2500. 19. 4080.

8. 680. 12. 5220. 16. \$3700. 20. 6090.

9. 940. 13. 3490. 17. \$6400. 21. 7070.

10. 370. 14. 6280. 18. \$9200. 22. 8000.

43. Division by 10's*Examples 1 to 4, oral — Examples 5 to 13, written*

1. What is the short way of dividing 80 by 20?

2. Divide 28 by 4; \$28 by \$4; 28 ft. by 4 ft.;
28 tens by 4 tens; 280 by 40.3. We see that to divide 280 by 40 is
$$4\cancel{0})\cancel{2}8\cancel{0}$$
$$\underline{7}$$
the same as to divide 28 by 4, canceling the 0's as here shown. Divide 240 by 40 in this way.

4. Divide 250 by 50; 480 by 40; 500 by 50.

Copy and divide:

5. 490 by 70. 8. 6750 by 90. 11. 1760 by 40.

6. 560 by 80. 9. 5280 by 40. 12. 1120 by 20.

7. 1230 by 30. 10. 4440 by 60. 13. 1840 by 80.

If we divide 3421 by 4, we have a quotient 855 and a remainder 1. But $1 \div 4 = \frac{1}{4}$, so we write for the total quotient $855\frac{1}{4}$.

$$\begin{array}{r} 4 \overline{)3421} \\ \underline{855\frac{1}{4}} \end{array}$$

If we divide 2967 by 10, we may cut off the last figure, 7. Then the rest of the number is the quotient, and 7 is the remainder. We therefore write as the total quotient $296\frac{7}{10}$.

$$\begin{array}{r} 10 \overline{)2967} \\ \underline{296\frac{7}{10}} \end{array}$$

To divide 143 by 11, we write the numbers as here shown.

Then 14 (tens) $\div 11 = 1$ (ten), with 3 (tens) remainder. Write the 1 above tens.

Subtract and bring down the next figure, and we have 33 to be divided.

$33 \div 11 = 3$. Write the 3 above units.

Subtract 3×11 , and we have no remainder.

The quotient is 13.

This kind of division is called *long division*. That on page 198 is called *short division*.

20. Make a problem about $\$737 \div \11 , and solve it; also about $\$781 \div \11 .

To divide 714 by 21, we proceed as follows:

$$\begin{array}{r}
 7 \div 2 = 3 \text{ and some remainder, and } 71 \div 21 \\
 \text{also equals 3 and some remainder.} \\
 \text{Subtract } 3 \text{ (tens)} \times 21 \text{ from } 71 \text{ tens.} \\

Examples 1 to 5, oral — Examples 6 to 14, written

1. How much is $40 \div 20$? Then $40 \div 19$ will be nearly what number?

2. How much is $90 \div 30$? Then $90 \div 29$ will be nearly what number?

State the first figure in each quotient:

3. $4000 \div 19$. 4. $9000 \div 29$. 5. $8000 \div 39$.

Divide:

6. $418 \div 19$. 9. $928 \div 29$. 12. $3636 \div 36$.

7. $589 \div 19$. 10. $1189 \div 29$. 13. $3774 \div 37$.

8. $798 \div 19$. 11. $1560 \div 39$. 14. $8140 \div 74$.

50. Two-figure Divisors

Examples 1 to 3, oral — Examples 4 to 12, written

1. How many suits of clothes can be bought for \$75, at \$25 each?

2. How many loads of corn, each containing 22 bu., can be made from 88 bu.?

3. If a man saves \$30 a month, how long will it take him to save \$60? \$600?

Divide:

4. $6457 \div 59$. 7. $8372 \div 65$. 10. $6753 \div 57$.

5. $7436 \div 34$. 8. $8757 \div 67$. 11. $9362 \div 89$.

6. $5936 \div 47$. 9. $3764 \div 29$. 12. $8579 \div 73$.

To divide 24,000, 24,357, and 25,357 by 2000, we proceed as follows :

$$\begin{array}{r} 2000 \overline{)24000} \\ 12 \end{array} \quad \begin{array}{r} 2000 \overline{)24357} \\ 12 \begin{array}{l} 357 \\ 000 \end{array} \end{array} \quad \begin{array}{r} 2000 \overline{)25357} \\ 12 \begin{array}{l} 1357 \\ 000 \end{array} \end{array}$$

That is, we *cancel* (cross out) the zeros at the right of the divisor and cancel as many figures at the right of the dividend as we cancel zeros of the divisor, writing the complete remainder over the divisor.

Canceling three figures divides by 1000, and because we divide the rest by 2, we really have divided by 2000.

51. Divisors ending in Zeros

Examples 1 to 11, oral — Examples 12 to 21, written

1. \$9000 is how many times \$3000 ?
2. \$16,000 is how many times \$4000 ?

State the quotients :

VI. FRACTIONS

To take $\frac{3}{8}$ of this rectangle, we divide the rectangle into 8 equal parts and we take 3 of these parts.

In the fraction $\frac{3}{8}$, 3 is called the *numerator*, and it tells how many equal parts we take.

In the same fraction 8 is called the *denominator*, and it tells the number of equal parts into which the rectangle has been divided.

$$\frac{3}{8} = \frac{\text{numerator}}{\text{denominator}}.$$

The numerator and denominator are called the *terms* of the fraction. The terms of the fraction $\frac{3}{8}$ are 3 and 8.

A whole number, like 2, 7, or \$10, is called an *integer*.

An integer and a fraction together are called a *mixed number*; as $2\frac{1}{2}$, $\$4\frac{3}{4}$.

A fraction that is less than 1 is called a *proper fraction*; as $\frac{1}{2}$, $\frac{3}{4}$, $\frac{2}{5}$.

A fraction that is equal to 1 or greater than 1 is called an *improper fraction*; as $\frac{4}{4}$, $\frac{5}{5}$, $\frac{5}{4}$, $1\frac{5}{8}$.

Look at the above picture and study the following:

$\frac{1}{2}$ of 8 is 4.

$\frac{1}{8}$ of 8 is 1.

$\frac{1}{4}$ of 8 is 2.

$\frac{3}{8}$ of 8 is 3.

$\frac{3}{4}$ of 8 is 6.

$\frac{5}{8}$ of 8 is 5.

$\frac{4}{4}$ of 8 is 8.

$\frac{7}{8}$ of 8 is 7.

56. Fraction Names

Examples 1 to 7, oral — Examples 7 to 11, written

1. What is the numerator of the fraction $\frac{3}{4}$?
2. What is the denominator of the fraction $\frac{7}{8}$?
3. What do you mean by the terms of a fraction?
4. Name the integers: $4\frac{1}{2}$, $3\frac{7}{8}$, 6, $2\frac{1}{3}$, 5, $\frac{1}{2}$, 4.
5. Name the mixed numbers: $\frac{2}{3}$, 4, $\frac{3}{8}$, $5\frac{1}{2}$, $7\frac{3}{4}$.
6. Name the fractions: 7, $\frac{2}{3}$, 19, $\frac{7}{8}$, 5, $8\frac{1}{2}$, $\frac{9}{8}$, $6\frac{3}{4}$.
7. Name the proper fractions: $\frac{2}{3}$, $3\frac{1}{2}$, $\frac{4}{4}$, $\frac{5}{4}$, $\frac{1}{2}$, $\frac{6}{7}$.
8. Write ten proper fractions.
9. Write ten improper fractions.
10. Write ten mixed numbers.
11. Write ten integers.

57. Fraction Names

Examples 1 to 3, oral — Examples 4 to 11, written

1. In the fraction $\frac{3}{4}$ in., what does 4 tell you about the fraction? What does 3 tell you?
2. What does the denominator of any fraction tell you? What does the numerator tell you?
3. In the mixed number $2\frac{1}{3}$, which is the integer? What kind of a fraction is the other part?
4. Write 5 integers and 5 mixed numbers.
5. Write 5 proper and 5 improper fractions.

Write the results:

- | | | |
|-------------------------|-------------------------|--------------------------|
| 6. $\frac{1}{2}$ of 18. | 8. $\frac{1}{4}$ of 24. | 10. $\frac{1}{8}$ of 64. |
| 7. $\frac{1}{2}$ of 28. | 9. $\frac{1}{4}$ of 48. | 11. $\frac{1}{8}$ of 96. |

58. Reduction

Examples 1 to 3, oral — Examples 4 to 11, written

1. Calling each of these large rectangles *one*, tell how many halves you see in 1?

2. How many fourths do you see in $\frac{1}{2}$? in 1?

3. How many eighths do you see in $\frac{1}{4}$? in $\frac{1}{2}$? in 1?

Copy, complete, and learn :

4. $\frac{2}{2} = 1.$ 6. $\frac{8}{8} = 1.$ 8. $\frac{8}{8} = \frac{1}{4}.$ 10. $\frac{8}{8} = \frac{3}{4}.$

5. $\frac{4}{4} = 1.$ 7. $\frac{4}{4} = \frac{1}{2}.$ 9. $\frac{8}{8} = \frac{1}{2}.$ 11. $\frac{4}{4} = \frac{1}{2}.$

59. Reduction

Examples 1 and 2, oral — Examples 3 to 16, written

1. How many sixths do you see in $\frac{1}{2}$? in 1?

2. How many sixths do you see in $\frac{1}{3}$? in $\frac{2}{3}$?

Copy, complete, and learn :

3. $\frac{3}{3} = 1.$ 5. $\frac{6}{6} = \frac{1}{2}.$ 7. $\frac{6}{6} = \frac{2}{3}.$ 9. $\frac{2}{6} = \frac{1}{3}.$

4. $\frac{6}{6} = 1.$ 6. $\frac{6}{6} = \frac{1}{3}.$ 8. $\frac{6}{6} = \frac{2}{3}.$ 10. $\frac{4}{6} = \frac{2}{3}.$

Write the results :

11. $\frac{1}{3}$ of 21.

13. $\frac{1}{6}$ of 12.

15. $\frac{1}{6}$ of 42.

12. $\frac{1}{3}$ of 39.

14. $\frac{1}{6}$ of 30.

16. $\frac{1}{6}$ of 72.

We have now seen that $\frac{1}{2} = \frac{2}{4}$, that $\frac{1}{4} = \frac{2}{8}$, and that $\frac{1}{3} = \frac{2}{6}$, each term of the first fraction being multiplied by 2 to make the second.

Both terms of a fraction may be multiplied by the same number without changing the value of the fraction.

For example,

$$\begin{array}{cccc} \frac{1}{2} = \frac{2}{4} & \frac{3}{4} = \frac{6}{8} & \frac{2}{3} = \frac{4}{6} & \frac{3}{5} = \frac{6}{10} \\ \frac{1}{4} = \frac{2}{8} & \frac{1}{3} = \frac{2}{6} & \frac{1}{5} = \frac{2}{10} & \frac{1}{2} = \frac{5}{10} \end{array}$$

60. Reduction

Examples 1 to 4, oral — Examples 5 to 28, written

- How many eighths of an inch in $\frac{1}{2}$ in.?
- How many quarters of a dollar in $\$ \frac{1}{2}$?
- How many tenths of a foot in $\frac{1}{2}$ ft.?
- How many sixths of a foot in $\frac{2}{3}$ ft.?

Express as eighths :

$$5. \frac{1}{2}. \quad 6. \frac{1}{4}. \quad 7. \frac{3}{4}. \quad 8. 1. \quad 9. \frac{2}{2}. \quad 10. \frac{5}{4}.$$

Express as twelfths :

$$11. \frac{1}{2}. \quad 12. \frac{1}{4}. \quad 13. \frac{3}{4}. \quad 14. \frac{1}{3}. \quad 15. \frac{1}{6}. \quad 16. \frac{5}{6}.$$

Express as tenths :

$$17. \frac{1}{2}. \quad 18. \frac{1}{5}. \quad 19. \frac{2}{5}. \quad 20. \frac{3}{5}. \quad 21. \frac{4}{5}. \quad 22. \frac{7}{5}.$$

Express as sixths :

$$23. \frac{1}{3}. \quad 24. \frac{2}{3}. \quad 25. \frac{3}{3}. \quad 26. 1. \quad 27. \frac{4}{3}. \quad 28. \frac{5}{3}.$$

We have seen that $\frac{1}{2}$ and $\frac{2}{4}$ have the same value ; that is, $\frac{2}{4} = \frac{1}{2}$. In the same way, $\frac{2}{8} = \frac{1}{4}$, $\frac{5}{10} = \frac{1}{2}$, and so on, each term of the first fraction being divided by the same number to make the second.

Both terms of a fraction may be divided by the same number without changing the value of the fraction.

For example,

$$\frac{2}{4} = \frac{1}{2} \qquad \frac{4}{8} = \frac{1}{2} \qquad \frac{4}{6} = \frac{2}{3} \qquad \frac{5}{10} = \frac{1}{2}$$

When both terms cannot be divided by the same number, the fraction is said to be *in lowest terms*.

To reduce a fraction to lowest terms, divide by the largest number that will divide both terms without a remainder.

$$\frac{8}{12} = \frac{8 \div 4}{12 \div 4} = \frac{2}{3}, \text{ lowest terms.}$$

In this example 4 is said to be *canceled* from both terms when the work is written like this :

$$\frac{\overset{2}{\cancel{8}}}{\underset{3}{\cancel{12}}} = \frac{2}{3}.$$

Study the following :

$$\frac{\overset{2}{\cancel{10}}}{\underset{5}{\cancel{50}}} = \frac{2}{5} \qquad \frac{\overset{2}{\cancel{20}}}{\underset{5}{\cancel{100}}} = \frac{2}{5} \qquad \frac{\overset{3}{\cancel{21}}}{\underset{7}{\cancel{147}}} = \frac{3}{7}.$$

Examples 1 and 2, oral — Examples 3 to 8, written

1. How many halves in 1?
in 2?

2. How many fourths in 1?
in 2? in 3? in 4?

Because $1 = \frac{4}{4}$, 2 must equal $\frac{2 \times 4}{4}$, or $\frac{8}{4}$.

Because $1 = \frac{10}{10}$, 5 must equal $\frac{5 \times 10}{10}$, or $\frac{50}{10}$.

Express as fourths :

3. 2. 4. 7. 5. 9. 6. 12. 7. 15. 8. 3.

2. Express $\frac{5}{4}$ as a mixed number.
3. Express $\frac{7}{4}$ as a mixed number.

To express an improper fraction as a mixed number, divide the numerator by the denominator.

Thus $\frac{6}{4} = 6 \div 4 = 1\frac{2}{4}$, or $1\frac{1}{2}$.

15. A box is $6\frac{3}{4}$ in. long and $3\frac{1}{8}$ in. wide. How far is it around the box?

We have learned that in adding fractions we should have the denominators alike.

If we have to add $\frac{1}{2}$, $\frac{2}{3}$, and $\frac{3}{4}$, we must multiply the terms of each fraction by some number that shall give the required denominator.

We find the smallest number that will contain each of the denominators 2, 3, and 4, without a remainder. This number is called the *least common denominator* of the fractions.

Since it must contain 2, 3, and 4, this denominator must be at least as large as 3×4 , and we see that 12 does contain all three numbers.

12 is the least common denominator of $\frac{1}{2}$, $\frac{2}{3}$, and $\frac{3}{4}$.

$\frac{1}{2}$ is how many twelfths? $\frac{1}{2}$ is $\frac{6}{12}$.

$\frac{2}{3}$ is how many twelfths? $\frac{2}{3}$ is $\frac{8}{12}$.

$\frac{3}{4}$ is how many twelfths? $\frac{3}{4}$ is $\frac{9}{12}$.

Add all these and reduce to a mixed number.

Multiply the terms by 6. $\frac{1}{2} = \frac{6}{12}$

Multiply the terms by 4. $\frac{2}{3} = \frac{8}{12}$

Multiply the terms by 3. $\frac{3}{4} = \frac{9}{12}$

Add and reduce, the sum being $\frac{23}{12} = 1\frac{1}{12}$

Since in practical arithmetic we no longer use common fractions with large terms, it is not necessary to use the terms *greatest common divisor* and *least common multiple* at this time. Such definitions and additional explanation as may be necessary with individual pupils or required by particular courses of study are best given by the teacher, but plenty of practice is the only means of securing quickness in this work. Teachers may give the definitions of factors and prime factors and a brief list of prime numbers at this time, as shown in the Appendix, if the course of study requires it.

79. Multiplying by an Integer

Examples 1 to 3, oral — Examples 4 to 15, written

1. How much is $2 \times 3\text{¢}$? $2 \times \$3$? 2×3 fourths?
2. Reduce $\frac{6}{4}$ to halves; to a mixed number.
3. Reduce $3 \times \frac{2}{3}$ to a whole number.

To multiply a fraction by an integer, multiply the numerator and write the product over the denominator. Reduce the result to lowest terms.

Multiply :

80. Multiplying by an Integer

Examples 1 to 3, oral — Examples 4 to 11, written

1. How much is $4 \times \frac{1}{4}$? $4 \times \frac{3}{4}$?
2. How much is $6 \times \frac{1}{3}$? $6 \times \frac{2}{3}$?
3. How much is $10 \times \frac{1}{5}$? $10 \times \frac{3}{5}$?

In multiplying a fraction it is shorter to cancel if possible before multiplying the numerator.

$$8 \times \frac{3}{4} = \frac{\overset{2}{\cancel{8}} \times 3}{\underset{2}{\cancel{4}}} = 6.$$

Multiply :

 3. How much is $\frac{1}{2}$ of $\frac{2}{3}$ in.? $\frac{1}{2}$ of $\frac{2}{3}$ ft.?
- To take $\frac{1}{2}$ of $\frac{2}{3}$ is called *multiplying* $\frac{2}{3}$ by $\frac{1}{2}$.

To multiply one fraction by another, multiply the numerators together for a new numerator and the denominators together for a new denominator. Always cancel if possible.

$$\frac{2}{3} \text{ of } \frac{3}{4} = \frac{\cancel{2} \times \cancel{3}}{\cancel{3} \times 4} = \frac{1}{2}.$$

Teachers should explain the advantages of cancellation in solving problems, requiring its use where it is justified.

VII. MEASURES

98. Table of Length

Examples 1 to 7, oral — Examples 8 to 15, written

1. How many inches make a foot?
2. How many feet make a yard?
3. An inch is what part of a foot?
4. A foot is what part of a yard?
5. Measure $5\frac{1}{2}$ yd. along the side of the room.
This length is called a *rod*.
6. Read aloud and learn :

12 inches (in.) = 1 foot (ft.)

3 feet = 1 yard (yd.)

$5\frac{1}{2}$ yards or $16\frac{1}{2}$ feet = 1 rod (rd.)

320 rods or 5280 feet = 1 mile (mi.)

7. Do you know of some place that is one mile from the school? What place is it?

8. Multiply $16\frac{1}{2}$ ft. by 320 and thus find the number of feet in a mile.

9. Divide 5280 ft. by 320 and thus find the number of feet in a rod.

10. Multiply 3 ft. by $5\frac{1}{2}$ and thus find the number of feet in a rod.

11. How many feet are there in 2 mi.?

12. How many feet are there in $\frac{1}{2}$ mi.?

13. How many feet are there in $\frac{1}{4}$ mi.?

14. How many rods are there in $\frac{3}{4}$ mi.?

15. How many yards are there in $\frac{1}{2}$ mi.?

99. Square Measure

Examples 1 to 7, oral — Examples 8 to 14, written

1. How many inches in 1 ft.?
2. How many square inches in 1 sq. ft.?
3. How many square feet in 1 sq. yd.?
4. How many yards in 1 rd.?
5. How could we find the number of square yards in 1 square rod?
6. Do you know of a piece of land that contains about 1 acre? Tell the class where it is.
7. Read aloud and learn :

144 square inches (sq. in.) = 1 square foot (sq. ft.)

9 square feet = 1 square yard (sq. yd.)

30½ square yards = 1 square rod (sq. rd.)

160 square rods = 1 acre (A.)

640 acres = 1 square mile (sq. mi.)

A strip of land 4 rd. wide and 40 rd. long contains an acre.

8. How many square inches in 30 sq. ft.?
9. How many square rods in 15 A.?
10. How many acres in 6 sq. mi.?
11. How many 160-acre farms equal 1 sq. mi.?
12. Make a problem about the area of some land, and solve it.
13. A piece of land is 32 rd. long and 20 rd. wide. How many acres does it contain?
14. A piece of land is 48 rd. long and 32 rd. wide. How many acres does it contain?

100. Cubic Measure

Examples 1 to 5, oral — Examples 6 to 13, written

1. How many cubic inches in a block 1 in. long, 1 in. wide, and 1 in. high?

2. How long is the edge of a cubic inch? of a cubic foot? of a cubic yard?

3. If a block is 3 in. long, 2 in. wide, and 4 in. high, the lower layer of cubes will contain 2×3 cubic inches. There are four of these layers.

How many cubic inches in the block?

4. How will you find the number of cubic feet in a cubic yard?

5. Read aloud and learn :

1728 cubic inches (cu. in.) = 1 cubic foot (cu. ft.)

27 cubic feet = 1 cubic yard (cu. yd.)

6. If a box is 12 in. long, 8 in. wide, and 5 in. deep, the volume is $12 \times 8 \times 5$ cu. in. How much is this?

Find the volumes of boxes of these measurements:

- | | |
|------------------------|----------------------------|
| 7. 3 ft., 6 ft., 4 ft. | 10. 18 in., 12 in., 8 in. |
| 8. 9 in., 8 in., 7 in. | 11. 21 in., 17 in., 12 in. |
| 9. 6 ft., 8 ft., 7 ft. | 12. 32 in., 28 in., 17 in. |

13. If a room is 24 ft. long, 16 ft. wide, and $10\frac{1}{2}$ ft. high, how many cubic feet of air does the room contain?

101. Cubic Measure

Examples 1 to 3, oral — Examples 4 to 6, written

1. This pile of wood is 8 ft. long, 4 ft. wide, and 4 ft. high. How would you find the number of cubic feet that it contains?

2. Read aloud and learn :

128 cubic feet = 1 cord (cd.)

This picture represents a cord of wood.

3. What will 9 cd. of wood cost at \$4 a cord?
4. A wagon box is 7 ft. long, 3 ft. wide, and 2 ft. high. How many cubic feet does it contain?
5. How many cubic feet in the pile of wood 8 ft. long, 4 ft. wide, and 4 ft. high?
6. How many cubic yards of earth in an excavation 12 yd. long, 8 yd. wide, and 2 yd. deep?

102. Time

Examples 1 to 4, oral — Examples 5 to 13, written

1. How many minutes in 1 hr.?
2. How many hours in 1 da.?
3. How many days in 1 wk.? in 2 wk.?
4. Read aloud and learn :

60 seconds (sec.) = 1 minute (min.)

60 minutes = 1 hour (hr.)

24 hours = 1 day (da.)

7 days = 1 week (wk.)

365 days = 1 common year (yr.)

366 days = 1 leap year

100 years = 1 century

There are 12 months (mo.) or about 52 weeks in a year.

The names of the months are January, February, March, April, May, June, July, August, September, October, November, December.

Thirty days hath September,
April, June, and November.

The other months have 31 days each, except February, which has 28 days in each year except leap year, when it has 29 days. Common years have 365 days, leap years have 366 days.

Express as hours :

5. 3 da. 6. $3\frac{1}{4}$ da. 7. 1 wk. 8. 120 min. 9. $2\frac{1}{2}$ da.

Express as days :

10. 8 wk. 11. 26 wk. 12. 48 hr. 13. 144 hr.

103. Review of Liquid Measure*Examples 1 to 4, oral — Examples 5 to 20, written*

1. How many gills in 1 pt.? in 6 pt.?
2. How many pints in 1 qt.? in 9 qt.?
3. How many quarts in 1 gal.? in 11 gal.?
4. How many gallons in 8 qt.? in 16 qt.?

Express as quarts, or as quarts and pints :

- | | | | |
|------------|------------------------|------------|------------|
| 5. 1 gal. | 7. $4\frac{1}{2}$ gal. | 9. 24 pt. | 11. 8 gi. |
| 6. 23 gal. | 8. $5\frac{1}{4}$ gal. | 10. 15 pt. | 12. 32 gi. |

Express as gallons, or as gallons and quarts :

- | | | | |
|------------|------------|------------|------------|
| 13. 8 qt. | 15. 9 qt. | 17. 18 pt. | 19. 34 pt. |
| 14. 64 qt. | 16. 16 pt. | 18. 26 pt. | 20. 42 pt. |

104. Review of Dry Measure*Examples 1 to 4, oral — Examples 5 to 16, written*

1. How many pints in 1 qt.? in 20 qt.?
2. How many quarts in 1 pk.? in 6 pk.?
3. How many pecks in 1 bu.? in 11 bu.?
4. How many bushels in 12 pk.? in 16 pk.?

Express as pecks, or as pecks and quarts :

- | | | | |
|----------|-----------|------------|------------|
| 5. 1 bu. | 7. 20 bu. | 9. 16 qt. | 11. 40 qt. |
| 6. 8 bu. | 8. 25 bu. | 10. 32 qt. | 12. 80 qt. |

Express as bushels, or as bushels and pecks :

- | | | | |
|-----------|------------|------------|-----------|
| 13. 8 pk. | 14. 32 pk. | 15. 80 pk. | 16. 9 pk. |
|-----------|------------|------------|-----------|

105. Weight

Examples 1 to 3, oral — Examples 4 to 8, written

1. How many ounces in 1 lb.? in 10 lb.?
2. Name something that is sold by the ton.
3. Read aloud and learn :

16 ounces (oz.) = 1 pound (lb.)

2000 pounds = 1 ton (T.)

Find the cost of :

4. 7 T. of coal at \$5.50 a ton.
5. 25 T. of hay at \$14.50 a ton.
6. 8 oz. of pepper at 18¢ a pound.
7. 75 T. of ice at \$2.50 a ton ; at \$3.50 a ton.
8. $6\frac{1}{2}$ T. of coal at \$6.50 a ton ; at \$9 a ton.

106. Weight

Examples 1 to 6, oral — Examples 7 to 12, written

1. If 4 lb. of raisins cost \$1.20, what is the price per pound? per half pound? for 2 lb.?

Find the number of ounces in :

2. $\frac{1}{8}$ lb. 3. $\frac{3}{4}$ lb. 4. 1 lb. 4 oz. 5. 1 lb. 10 oz.
6. How many pounds in $\frac{1}{2}$ T.? in $\frac{1}{4}$ T.? in $2\frac{1}{2}$ T.?

Find the number of ounces in :

7. 6 lb. 8. 8 lb. 9. 25 lb. 10. $1\frac{1}{2}$ lb. 11. $2\frac{1}{4}$ lb.
12. What is the cost of $7\frac{1}{2}$ lb. of butter at 30¢ a pound? at 32¢ a pound? at 28¢ a pound?

107. Measuring Temperature

Examples 1 to 3, oral — Examples 4 and 5, written

1. What is the temperature to-day?
2. What is the highest temperature you remember in summer?
3. What is the lowest temperature you remember in winter?

Water freezes at 32 degrees (32°) and boils at 212°.

4. How many degrees between the freezing and boiling points of water?
5. How many degrees above freezing is the temperature in your schoolroom to-day?

108. Measuring Temperature

Examples 1 to 3, oral — Examples 4 to 6, written

1. How many degrees from 32° to 72°?
2. How many degrees from 72° to 98°?
3. How many degrees from 1° below zero to 1° above zero?
4. The temperature of the body is about 98°. How many degrees is this above 32°?
5. If it is 52° in an Eskimo boy's snow hut and 68° in your schoolroom, how much warmer is it where you are?
6. How many degrees from 68° to 212°? from 32° to 98°? from 10° below zero to 32° above zero?

VIII. DENOMINATE NUMBERS

109. Reduction

Examples 1 and 2, oral — Examples 3 to 12, written

1. How many ounces in 1 lb.? in 1 lb. 4 oz.?
2. How many inches in 2 ft.? in 2 ft. 6 in.?

Express as ounces :

3. 3 lb. 8 oz.
4. 5 lb. 6 oz.
5. 7 lb. 12 oz.

Express as inches :

6. 3 ft. 8 in.
7. 9 ft. 6 in.
8. 15 ft. 10 in.

Express as quarts :

9. $3\frac{1}{2}$ gal.
10. $7\frac{1}{4}$ gal.
11. $9\frac{3}{4}$ gal.
12. $12\frac{1}{2}$ gal.

110. Reduction

Examples 1 to 3, oral — Examples 4 to 18, written

1. How many pounds in 16 oz.? in 32 oz.?
2. How many feet in 12 in.? in 24 in.?
3. How many hours in 60 min.? in 120 min.?

Express as pounds and ounces :

4. 96 oz.
5. 18 oz.
6. 24 oz.
7. 32 oz.
8. 36 oz.

Express as feet and inches :

9. 13 in.
10. 15 in.
11. 24 in.
12. 27 in.
13. 36 in.

Express as gallons and fractions :

14. 4 qt.
15. 5 qt.
16. 10 qt.
17. 16 qt.
18. 35 qt.

111. Addition

Examples 1 to 3, oral — Examples 4 to 11, written

1. How many inches are 8 in. + 6 in.? Express this as feet and inches.

2. Add 5 ft. and 14 in., expressing the result as feet and inches.

$$\begin{array}{r} 2 \text{ ft. } 8 \text{ in.} \\ 3 \quad 6 \\ \hline \end{array}$$

3. Add 2 ft. 8 in. and 3 ft. 6 in. as here shown.

$$\begin{array}{r} 5 \text{ ft. } 14 \text{ in.} \\ = 6 \text{ ft. } 2 \text{ in.} \end{array}$$

4. 7 ft. 9 in. + 6 ft. 8 in. 6. 3 lb. 9 oz. + 7 lb. 8 oz.

5. 9 ft. 7 in. + 7 ft. 6 in. 7. 5 lb. 8 oz. + 8 lb. 10 oz.

8. 2 pk. 7 qt. + 3 pk. 5 qt.

9. 3 pk. 6 qt. + 2 pk. 6 qt.

10. 4 da. 18 hr. + 2 da. 16 hr.

11. 5 da. 22 hr. + 6 da. 15 hr.

112. Addition

Examples 1 to 3, oral — Examples 4 to 9, written

1. Add 2 ft. 7 in. and 3 ft. 5 in.

2. Add 2 lb. 7 oz. and 3 lb. 5 oz.

3. Add 2 yd. 7 in. and 3 yd. 5 in.

114. Addition

Examples 1 to 3, oral — Examples 4 to 6, written

1. Allowing 30 da. to the month, how many months and days in 43 da. ?

2. 15 mo. + 1 mo. 13 da.
is how much ?

Always call 30 days a month in computing time.

3 yr. 7 mo. 28 da.
<hr/> 2 8 15
5 yr. 15 mo. 43 da.
= 6 yr. 4 mo. 13 da.

118. Subtraction*Examples 1 to 3, oral — Examples 4 to 8, written*

1. From a board 12 ft. long a carpenter saws 1 in. from each end. How long is the board then?
2. From 7 yd. of cloth a lady cuts 30 in. How long is the board then?
3. How long is it from half past ten this morning to noon?
4. 9 hr. 20 min. — 6 hr. 40 min.
5. 4 T. 1750 lb. — 2 T. 1900 lb.
6. 4 yr. 2 mo. 10 da. — 1 yr. 4 mo. 25 da.
7. 5 yr. 1 mo. 3 da. — 2 yr. 9 mo. 15 da.
8. How many months and days from your last birthday until to-day?

119. Subtraction*Examples 1 to 4, oral — Examples 5 to 11, written*

1. 7 ft. 6 in. — 5 ft. 6 in.
2. 7 ft. 6 in. — 5 ft. 8 in.
3. 7 lb. 6 oz. — 5 lb. 6 oz.
4. 7 lb. 6 oz. — 5 lb. 8 oz.

8. 8 yr. 6 mo. 14 da. — 4 yr. 6 mo. 4 da.
9. 6 yr. 7 mo. 15 da. — 2 yr. 10 mo. 25 da.
10. 7 yr. 2 mo. 10 da. — 5 yr. 4 mo. 24 da.
11. 8 yr. 3 mo. 18 da. — 4 yr. 9 mo. 27 da.

To multiply 2 lb. 9 oz. by 2, we multiply each part separately, the result being 4 lb. 18 oz. But 18 oz. = 1 lb. 2 oz., so we write the result 5 lb. 2 oz.

$$\begin{array}{r} 2 \text{ lb. } 9 \text{ oz.} \\ \underline{ 2} \\ 4 \text{ lb. } 18 \text{ oz.} \end{array}$$

To multiply 2 ft. 9 in. by 2, we proceed as before, the result being 4 ft. 18 in. But 18 in. = 1 ft. 6 in., so we write the result 5 ft. 6 in.

$$\begin{array}{r} 2 \text{ ft. } 9 \text{ in.} \\ \underline{ 2} \\ 4 \text{ ft. } 18 \text{ in.} \\ = 5 \text{ ft. } 6 \text{ in.} \end{array}$$

3. Multiply by 6: 1 ft. 2 in.; 1 lb. 2 oz.; 1 gal. 2 qt.

Multiply :

4. 23 mi. 125 ft. 5 <hr style="width: 100%;"/>	5. 37 gal. 2 qt. 15 <hr style="width: 100%;"/>	6. 26 min. 30 sec. 8 <hr style="width: 100%;"/>
7. 25 bu. 2 pk. 12 <hr style="width: 100%;"/>	8. 48 da. 2 hr. 12 <hr style="width: 100%;"/>	9. 12 hr. 20 min. 3 <hr style="width: 100%;"/>

122. Multiplication*Examples 1 to 3, oral — Examples 4 to 11, written*

1. Multiply by 3: 1 qt. 1 pt.; 1 lb. 1 oz.; $1\frac{1}{2}$.
2. Multiply by 8: 1 lb. 2 oz.; 1 ft. 2 in.
3. Multiply by 10: \$1.20; 1 mi. 20 ft.
4. If each side of a triangle is 1 ft. 4 in., how far is it around the triangle?
5. If a square is 2 ft. 3 in. on a side, how far is it around the square?
6. 7×16 ft. 8 in.
7. 9×21 ft. 2 in.
8. 5×36 ft. 8 in.
9. 12×5 ft. 6 in.
10. 15×2 lb. 1 oz.
11. 25×3 yd. 1 in.

123. Division

Examples 1 to 3, oral — Examples 4 to 14, written

1. How much is $\frac{1}{2}$ of 8 ft.? of 8 ft. 8 in.?
2. How much is $\frac{1}{3}$ of 9 lb.? of 9 lb. 9 oz.?
3. How much is $\frac{1}{4}$ of 16 yd.? of 16 yd. 16 in.?

To divide 25 ft. 10 in. by 5, we divide the two parts separately. Then $25 \text{ ft. } 10 \text{ in.} \div 5 = 5 \text{ ft. } 2 \text{ in.}$

- | | |

124. Division

Examples 1 to 3, oral — Examples 4 to 13, written

1. How much is $\frac{1}{2}$ of 3? of 3 ft.? of 2 ft. 12 in.?
2. How much is $\frac{1}{3}$ of 4? of 4 ft.? of 3 ft. 12 in.?
3. How much is $\frac{1}{4}$ of 5? of 5 ft.? of 4 ft. 12 in.?

To divide 7 ft. by 6, we think of 7 ft. as 6 ft. 12 in. Then $6 \text{ ft. } 12 \text{ in.} \div 6 = 1 \text{ ft. } 2 \text{ in.}$

Obtuse Angle

These are the most important triangles :

Right Triangle

Acute Triangle

Obtuse Triangle

A *right triangle* has one right angle.

An *acute triangle* has *all* acute angles.

An *obtuse triangle* has one obtuse angle.

The most important four-sided figures are the square and the rectangle. Here is a rectangle made up of squares, one square being shaded.

The *perimeter* of a figure is the sum of its sides.

The most important solid figures are the rectangular solid and the cube. Here is a rectangular solid and a cube. This cube is half

as high as the rectangular solid. Where have you seen a cube? Where is there a rectangular solid in the schoolroom?

127. Perimeters

Examples 1 to 4, oral — Examples 5 to 10, written

1. Measure this room. What is the perimeter?
2. What is the perimeter of a square that is $1\frac{1}{4}$ in. on a side?
3. What is the perimeter of a triangle whose sides are 5 in., 6 in., and 7 in.?
4. Find the perimeter of a baseball diamond that is 90 ft. on a side.

Find the perimeters of rectangles whose sides are :

- | | |
|--|--|
| 5. 7 in., 9 in. | 8. 2 ft. 7 in., 2 ft. |
| 6. $8\frac{1}{2}$ in., $10\frac{1}{4}$ in. | 9. 39 in., 47 in. |
| 7. 1 ft. 2 in., 9 in. | 10. $62\frac{1}{2}$ in., $39\frac{3}{4}$ in. |

128. Perimeters

Examples 1 to 3, oral — Examples 4 to 6, written

1. Find the perimeter of a rectangle 10 ft. by 5 ft.
2. How much fringe will it take to go around a table cover that is 4 ft. 6 in. square?
3. How much border will it take to go around the carpet for a room 20 ft. by 15 ft.?
4. A triangular flower bed is 17 ft. 6 in. on a side. What is the perimeter?

Find the perimeters of triangles whose sides are :

5. 7 ft. 3 in., 8 ft. 5 in., 6 ft. 8 in.
6. 9 ft. 2 in., 8 ft. 7 in., 8 ft. 4 in.

129. Areas

Examples 1 to 4, oral — Examples 5 to 9, written

1. What is the area of a rectangle 2 in. by 3 in.?
2. What is the area of a rectangle 2 in. by $2\frac{1}{2}$ in.?
3. What is the area of a rectangle 3 in. by $3\frac{1}{2}$ in.?
4. A hall floor 4 ft.

by 10 ft. is covered with marble squares 1 ft. on a side, as here shown. How many

pieces of marble are there? How many square feet?

5. This is the plan of the grounds about a village house. The lot is 100 ft. wide and 200 ft. long. How many square feet does it contain?

6. The vegetable garden is 40 ft. by 80 ft. How many square feet does it contain?

7. The orchard is 60 ft. by 80 ft. How many square feet does it contain?

8. The residence is 34 ft. by $27\frac{1}{2}$ ft. How many square feet does it cover?

9. The grounds about the house are $33\frac{1}{3}$ yd. by 40 yd. Find the area.

130. Areas

Examples 1 to 7, oral — Examples 8 to 13, written

1. A piece of lawn is 33 ft. long and 27 ft. wide. What are its dimensions in yards? What is its area in square yards?

Find the areas of rectangles :

2. 7 in. by 9 in.

5. 9 ft. by 11 ft.

3. 6 in. by 8 in.

6. 7 ft. by 10 ft.

4. 4 in. by 12 in.

7. 10 ft. by 12 ft.

8. A room has one door 3 ft. wide and 8 ft. high, and two windows each 3 ft. by 6 ft. How many square feet of openings in the walls?

9. At 20¢ a square yard, what will it cost to oil a floor 6 yd. long and 4 yd. wide?

10. Express in inches the dimensions of a rectangle 1 ft. 2 in. by 1 ft. 7 in., and then find the area in square inches.

11. Express in inches the dimensions of a table top 2 ft. 6 in. by 3 ft. 9 in., and then find the area in square inches.

12. A cleaner charges 15¢ a square yard for cleaning rugs. A rug is $7\frac{1}{2}$ ft. by 6 ft. Find the cost of cleaning it.

13. The ceiling of a hall is to be decorated at a cost of 50¢ a square yard. The hall is 120 ft. long and 90 ft. wide. How much will it cost to decorate the ceiling?

131. Volumes

Examples 1 to 3, oral — Examples 4 to 7, written

1. What is the volume of a cube 1 in. on an edge?
2. If C is 1 cu. in., what is B ? what is A ?

3. How much is $4 \times 3 \times 2$ cu. in.?

Find the volumes of solids with these dimensions:

4. 7 in., 9 in., 14 in.
6. 8 in., 17 in., 26 in.
5. 9 in., 15 in., 23 in.
7. 3 ft., 15 ft., 29 ft.

132. Volumes

Examples 1 to 3, oral — Examples 4 to 6, written

1. How much is $2 \times 7 \times 10$ cu. in.?
2. What is the volume of a box that is 2 in. by 5 in. by 6 in.?
3. What is the volume of a bin that is 5 ft. by 6 ft. by 10 ft.?
4. How many cubic feet in a schoolroom that is 42 ft. by 24 ft. by 15 ft.?

Find the volumes of solids with these dimensions:

5. 27 in., 31 in., 56 in.
6. 39 in., 43 in., 57 in.

133. Volumes

Examples 1 to 4, oral — Examples 5 to 12, written

1. How many cubic feet in 1 cu. yd.? in 10 cu. yd.?
2. How many cubic yards in a cellar 2 yd. by 4 yd. by 5 yd.?
3. How many cubic inches in a box 3 in. by 4 in. by 5 in.?
4. How many cubic inches in a cube that is 2 in. on an edge? 3 in. on an edge?
5. How many cubic inches in an aquarium that is 16 in. long, 8 in. wide, and 9 in. deep?
6. How many cubic feet in a wall that is 36 ft. long, 30 ft. wide, and 2 ft. thick?
7. A cellar is to be dug 25 ft. long, 19 ft. wide, and 6 ft. deep. How many cubic feet of earth must be taken out?
8. A cistern is 6 ft. square at the bottom and $5\frac{1}{2}$ ft. deep. How many cubic feet does it contain?
9. An iron water tank is 8 ft. long, 6 ft. wide, and $4\frac{1}{2}$ ft. deep. How many cubic feet does it contain?
10. A coal bin is 22 ft. long, 15 ft. wide, and 7 ft. deep. How many cubic feet does it contain?
11. A schoolroom is 38 ft. long, 30 ft. wide, and $12\frac{1}{2}$ ft. high. How many cubic feet does it contain?
12. A haymow is 24 ft. long, 15 ft. wide, and 9 ft. high. Express the dimensions in yards, and find the number of cubic yards it contains.

X. BILLS AND RECEIPTS

When a person buys goods at a store he sometimes pays for them at that time, and sometimes he has them *charged*.

To charge goods means that their cost is added to the purchaser's *account* at the store, an account being a statement of what he owes there.

The store sends the purchaser a *bill*, sometimes every month, showing him how much he owes, and asking him to pay.

In the bill given below the symbol @ means "at." For example, 16 cans of soup @ 10¢ means that the soup cost 10¢ a can ; 12 doz. eggs @ 30¢ means 12 doz. eggs at 30¢ a dozen.

To *fill a bill*, or *make the extensions*, means to write the cost after each item.

To *foot a bill*, means to add the items and find the total cost.

To *receipt a bill* means to stamp or write the words "Paid" or "Received Payment," this being signed by the one to whom it is due.

This is a receipted bill :

CHICAGO, *January 21, 1915*

XI. PROBLEM SOLVING

139. Cancellation

Examples 1 to 3, oral — Examples 4 to 9, written

1. If 2 books cost 60¢, what will 1 book cost?
What will 3 books cost?

2. If 4 oranges cost 20¢, what will 1 orange cost? What will 7 oranges cost?

3. If we divide both numerator and denominator of a fraction by the same number, what may be said as to the value of the fraction?

It shortens the work to cancel wherever possible.

For example, if 7 tons of coal cost

\$35, what will 12 tons cost?

1 ton costs $\$35 \div 7$, and 12 tons cost 12 times this result, or \$60.

$$12 \times \frac{\$35}{7} = \$60$$

4. If 7 tons of coal cost \$38.50, what will 12 tons cost?

5. If 7 acres of land cost \$315, what will 9 acres cost?

6. If 11 school desks cost \$44, what will 8 desks cost? What will 22 desks cost?

7. If 6 yd. of velvet cost \$7.50, what will 15 yd. cost? What will 24 yd. cost?

8. If 9 bu. of wheat cost \$8.55, what will 15 bu. cost? What will 18 bu. cost?

9. If a conductor collects 75¢ from 15 people, how much will he collect from 25 people?

140. Cancellation

Examples 1 to 4, oral — Examples 5 to 10, written

1. Reduce to lowest terms: $\frac{2}{4}$; $\frac{4}{8}$; $\frac{3}{9}$; $\frac{3}{12}$; $\frac{4}{12}$; $\frac{4}{16}$.
2. Reduce to lowest terms: $\frac{5}{10}$; $\frac{3}{15}$; $\frac{5}{15}$; $\frac{6}{16}$; $\frac{12}{15}$.
3. The product of two numbers is 75. One of the numbers is 3. What is the other number?

4. The product of three numbers is 30. Two of the numbers are 2 and 5. What is the third number?

We may apply cancellation to cases like Ex. 4. Thus, if the product of three numbers is 384, and if two of the numbers are 12 and 8, the third number is 384 divided by 12×8 , or 4.

$$\frac{\begin{array}{r} 4 \\ \cancel{48} \\ \cancel{384} \end{array}}{\cancel{12} \times \cancel{8}} = 4$$

5. The product of three numbers is 396. Two of the numbers are 3 and 12. What is the third number?

6. The product of three numbers is 612. Two of the numbers are 4 and 9. What is the third number?

7. The volume of a box is 900 cu. in. The width is 12 in. and the depth is 5 in. What is the length?

8. The volume of a bin is 216 cu. ft. The length is 9 ft. and the depth is 4 ft. What is the width?

9. A schoolroom contains 9600 cu. ft. It is 40 ft. long and 20 ft. wide. How high is it?

10. A bar of iron 12 ft. long contains 3456 cu. in. The bar is rectangular and is 1 in. thick. How wide is it?

141. Problems in Capacity

Examples 1 to 4, oral — Examples 5 to 11, written

1. There are 231 cu. in. in 1 gal. How many cubic inches are there in 10 gal.?

2. A box is 2 in. deep, 3 in. wide, and 4 in. long. How many cubic inches in the box?

3. At 22 bricks to a cubic foot, how many bricks will be needed for 100 cu. ft. of wall? for half of this amount of wall?

4. At \$3 per cubic foot, how much must a builder pay for 1000 cu. ft. of wall? for 2000 cu. ft.?

5. Allowing $2150\frac{1}{2}$ cu. in. to a bushel, how many cubic inches are there in a bin that holds 50 bu.?

6. Allowing $1\frac{1}{4}$ cu. ft. to a bushel, how many cubic inches are there in a bin that holds 280 bu.?

7. A bin is 6 ft. long, 4 ft. wide, and 4 ft. deep. Allowing $1\frac{1}{4}$ cu. ft. to a bushel, how many bushels will the bin hold?

8. At \$2.80 per cubic foot, how much must a builder pay for a wall 30 ft. long, 7 ft. high, and $1\frac{1}{2}$ ft. thick?

9. There being 231 cu. in. in a gallon, how many gallons are there in a cistern containing 231 cu. ft.?

10. How many gallons are there in a cistern holding 2079 cu. in.?

11. A rectangular watering trough is 8 ft. long, 16 in. wide, and 14 in. deep. How many gallons will it hold?

142. Problems of the Farm

Examples 1 to 3, oral — Examples 4 to 9, written

1. How many sheep are 46 sheep and 24 sheep?
2. If there are 24 sheep in one flock and half as many in another flock, how many sheep are there in both flocks?
3. If each of 70 sheep yields 9 lb. of wool, how much do they all yield?

4. If a farmer pays \$6.30 a head for his sheep, how much will he pay for 70 sheep?
5. If 24 of his sheep yield $9\frac{1}{4}$ lb. of wool apiece, how much wool does he get from the 24 sheep?
6. If a farmer sells 725 lb. of wool at 45¢ a pound, how much does he receive?
7. If it costs a farmer 36¢ per hundred pounds to get his wool to market, and he has 675 lb. to send, how much will it cost for all this wool?
8. When wool is worth 38¢ a pound, what is the value of the wool from a sheep that yields $7\frac{1}{2}$ lb.?
9. If a farmer receives \$268.80 for 640 lb. of wool, how much does he receive per pound?

143. Problems of the Farm

Examples 1 to 3, oral — Examples 4 to 7, written

1. A farmer has 12 acres in one lot and twice as much in another lot. How much has he in both?

2. A farmer has 30 cows and twice as many sheep. How many sheep has he? How many cows and sheep together?

3. A farmer has a windmill that pumps 3 gal. of water a minute. At this rate, how much water will it pump in 1 hr.?

4. A farmer has a water tank that holds 120 cu. ft. of water. What is the weight of the water, 1 cu. ft. weighing $62\frac{1}{2}$ lb.?

5. A farmer finds that 1 qt. of corn will plant 240 hills. How much corn will he need to plant 480 hills? to plant 2760 hills?

6. A farmer allows $2\frac{1}{4}$ bu. of oats for sowing an acre. How much will he need for sowing 64 A.?

7. A farmer cares for the birds because a tree sparrow eats in a day enough seeds to produce 75 weeds. At this rate, 25 such birds will destroy in 2 wk. enough seeds to produce how many weeds?

144. Review

Examples 1 to 4, oral — Examples 5 to 9, written

1. In a class of 20 pupils $\frac{2}{3}$ are boys. How many boys are there? How many girls are there?

2. In a school of 150 pupils $\frac{2}{3}$ are boys. How many boys are there? How many girls are there?

3. A schoolroom is 30 ft. long and 20 ft. wide. How many square feet in the area of the floor?

4. A blackboard is 20 ft. long and 3 ft. high. How many square feet in the area of the blackboard?

5. A schoolroom has 5 windows. Each window is 3 ft. by 6 ft. What is the area of each window? of all the windows together?

6. A milk dealer in a city buys milk for 5¢ a quart. It costs him 1¢ a quart to deliver it. He sells it for 7¢ a quart. How much does he make on 1 qt.? on 175 gal.?

7. A man leaves his office at 5.30 P.M. and reaches home 35 min. later. At what time does he reach home?

8. A boy sawed the wood in a pile 8 ft. long, 4 ft. wide, and 2 ft. high. What part of a cord did he saw?

9. It is 85 mi. from Chicago to Milwaukee. A man went from Milwaukee to Chicago and back again 3 times a week for 4 weeks. How many miles did he travel in all?

145. Miscellaneous Problems

Examples 1 to 4, oral — Examples 5 to 10, written

1. A man pays \$15 a month for the rent of his house. How much does he pay in 2 mo.?

2. A gasoline stove uses 2 qt. of gasoline daily. How many quarts will it use in 30 da.?

3. A man saves \$200 a year for 8 yr. How much does he save in all?

4. On a lot costing \$600 is built a house costing \$3400 and containing furniture costing \$860. What is the value of the house, lot, and furniture?

5. A factory paid \$23,475 in wages in 313 da. What was the average amount paid each day?

6. A carload of coal containing 34,000 lb. is sold at \$5.45 a ton. How much is received for the carload?

7. A coal dealer sold 41,000 lb. of coal at \$7.25 a ton. How much did he receive for the coal?

8. In a certain school there are 362 pupils. It costs \$5430 a year to run the school. How much is the cost for each pupil?

9. A tank is 15 ft. long, 9 ft. wide, and 7 ft. deep. A cubic foot of water weighs $62\frac{1}{2}$ lb. What is the weight of water necessary to fill the tank?

10. Two automobiles are 90 mi. apart. They travel towards each other, one at the rate of 16 mi. an hour and the other at the rate of 14 mi. an hour. How long before they will meet?

XII. GENERAL REVIEW

146. Review

Examples 1 to 3, oral — Examples 4 to 8, written

1. At \$1.20 a bag, what will 2 bags of corn cost?
2. At \$3 a cord, what will 9 cords of wood cost?
3. At \$15 a ton, what will 10 tons of hay cost?
4. At \$1.15 a bag, what will 27 bags of corn cost?
5. At \$5.85 a ton, what will 37 tons of coal cost?
6. At \$11.25 a ton, what will 28 tons of plaster cost? What will 46 tons cost?
7. At \$3.25 a box, what will 44 boxes of oranges cost? What will 68 boxes cost?
8. At \$0.32 a dozen, what will 85 doz. eggs cost?

147. Review

Examples 1 to 3, oral — Examples 4 to 8, written

1. At 10¢ a pound, what is a bale (500 lb.) of cotton worth?
2. At \$2 a yard, what will 20 yd. of carpet cost?
3. At \$3.20 a day, what will a man earn in 10 da.?
4. If it takes 6 strips of carpet, each $6\frac{1}{2}$ yd. long, to carpet a room, how many yards are needed?
5. At 48¢ a yard, what will $15\frac{1}{2}$ yd. of linen cost?
6. At 24¢ a pound, what will $2\frac{3}{4}$ lb. of meat cost?
7. At \$4.25 a day, what will a man earn in 26 da.?
8. At \$20.25 a week, what will a man earn in 32 weeks? in 48 weeks? in 52 weeks?

APPENDIX

Although there is an unusually large amount of drill work in the body of the book, it frequently happens that some pupil, or even a whole class, needs extra drill upon the fundamental operations. On this account nearly six hundred additional problems are included in the exercises on pages 278 and 279.

There is a growing tendency to omit the subjects of greatest common divisor, least common multiple, prime numbers, factors, and tests of divisibility until a more advanced book is studied. Some courses of study require these topics at this time, however, and they are therefore treated here.

Most schools do not take up the study of decimal fractions until the second book in arithmetic is studied. Some schools, however, require this work while the first book is in the hands of the pupils. On this account some work in decimal fractions is given in this Appendix, to be used or not, as may be desired.

Work of this kind should be introduced as required while the regular text is being studied, or else it should be omitted entirely.

II. DIVISORS, MULTIPLES, FACTORS

The *greatest common divisor* (G.C.D.) of two or more numbers is the greatest number that is exactly contained in each of them.

Thus 6 is the G.C.D. of 12 and 18, although 2 and 3 are also divisors of these numbers.

The *least common multiple* (L.C.M.) of two or more numbers is the least number that exactly contains each of them.

Thus 30 is the L.C.M. of 10 and 15, although these numbers are also contained in 60, 90, and so on.

The least common denominator of several fractions is the least common multiple of the denominators.

Thus the least common denominator of $\frac{1}{6}$ and $\frac{1}{3}$ is 30, and this is the L.C.M. of the denominators.

An exact divisor of a number is also called a *factor* of the number.

Thus the factors of 30 are 2, 3, 5, 6, 10, and 15. This is expressed as follows: $30 = 2 \times 3 \times 5$, in which we see that $2 \times 3 = 6$, $2 \times 5 = 10$, $3 \times 5 = 15$.

The G.C.D. and L.C.M. of 30 and 45 may be found as follows:

$$30 = 2 \times 3 \times 5. \quad \text{G.C.D.} = 3 \times 5 = 15.$$

$$45 = 3 \times 3 \times 5. \quad \text{L.C.M.} = 2 \times 3 \times 3 \times 5 = 90.$$

The G.C.D. must contain all the *common* factors of 30 and 45, that is, all of the factors that are found in each. Therefore it equals 3×5 , or 15.

The L.C.M. must contain *every* factor found in either 30 or 45. Therefore it equals $2 \times 3 \times 3 \times 5$, or 90.

A number that has no factors excepting itself and 1 is called a *prime number*.

The prime numbers below 100 are as follows : 1, 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43, 47, 53, 59, 61, 67, 71, 73, 79, 83, 89, 97.

It is convenient to know these prime numbers because of their use in cancellation.

The numbers represented by 1, 2, 3, 4, 5, 6, 7, 8, and 9 are called *digits*.

A number is divisible by 2 if the last digit is divisible by 2, or if the number ends in 0.

Thus 12, 40, 96, and 1134 are all divisible by 2.

A number is divisible by 4 if the last two digits form a number divisible by 4, or if the number ends in two zeros.

Thus 724 and 1100 are both divisible by 4.

A number is divisible by 5 if it ends in 0 or 5.

Thus 11,135 and 24,410 are divisible by 5.

A number is divisible by 3 if the sum of its digits is divisible by 3.

Thus 72,111 is divisible by 3 because $7 + 2 + 1 + 1 + 1$, or 12, is divisible by 3.

A number is divisible by 9 if the sum of its digits is divisible by 9.

Thus 42,111 is divisible by 9 because $4 + 2 + 1 + 1 + 1$, or 9, is divisible by 9. In the same way we see that 10,800, 40,005, and 36,423 are all divisible by 9.

A number is divisible by 10 if it ends in 0.

Thus 3110 and 41,000 are both divisible by 10.

III. DECIMAL FRACTIONS

A dime is $\frac{1}{10}$ of \$1, and we write it thus: \$0.10.

A cent is $\frac{1}{100}$ of \$1, and we write it thus: \$0.01.

In the same way, $\frac{1}{10}$ of a foot may be written 0.10 ft., or merely 0.1 ft., and $\frac{1}{100}$ of a foot may be written 0.01 ft.

So we write

0.1, or .1, for $\frac{1}{10}$,

0.2, or .2, for $\frac{2}{10}$,

0.3, or .3, for $\frac{3}{10}$, and so on ;

0.01, or .01, for $\frac{1}{100}$,

0.02, or .02, for $\frac{2}{100}$, and so on ;

0.001, or .001, for $\frac{1}{1000}$,

0.125, or .125, for $\frac{125}{1000}$, and so on.

Fractions like .5, .25, and .125 are called *decimal fractions*.

Fractions like $\frac{1}{2}$, $\frac{2}{3}$, and $\frac{5}{12}$, where the numerator is written over the denominator, are called *common fractions*.

Study the following :

0.4, or .4, means $\frac{4}{10}$, or $\frac{2}{5}$;

0.5, or .5, means $\frac{5}{10}$, or $\frac{1}{2}$;

0.6, or .6, means $\frac{6}{10}$, or $\frac{3}{5}$;

0.7, or .7, means $\frac{7}{10}$;

0.8, or .8, means $\frac{8}{10}$, or $\frac{4}{5}$;

0.9, or .9, means $\frac{9}{10}$;

1.0 means $\frac{10}{10}$, or 1.

2. Point to .25 of the large square.

3. Point to .50 of the large square.

4. Point to .75 of the large square.

5. Show from the picture that $.25 = \frac{1}{4}$.

6. Show from the picture that $.50 = \frac{1}{2}$.

Study the picture and write common fractions in lowest terms equal to :

7. .75. 8. .10. 9. .20. 10. .40. 11. .05.

161. Decimal Fractions

Examples 1 to 3, oral — Examples 4 to 18, written

1. To what other common fraction is $\frac{5}{10}$ equal?
2. To what common fraction in lowest terms is .5 equal?
3. To what common fraction is .4 equal?

The name "common fraction" refers to the way in which the fraction is written. Thus $\frac{5}{10}$ is a common fraction, although it is only another way of writing the decimal fraction .5.

We now see why the period (.) after dollars, as in \$2.50, is called a *decimal point*. It separates the decimal fraction from the dollars.

In the number 21,345.789 we have

	Periods					
	Thousands		Units		Thousandths	
Orders :	Tens	Units	Hundreds	Tens	Units	Decimal point
	2	1	3	4	5	.
	7	8	9			
	21,345.789					

.789 is 789 thousandths, or $\frac{789}{1000}$;

.123 is 123 thousandths, or $\frac{123}{1000}$;

.021 is 21 thousandths, or $\frac{21}{1000}$.

<u> 2</u>	<u> 3</u>	<u> 4</u>	<u> 6</u>	<u> 8</u>

To multiply 2.98 by 7, we proceed in the same way as in multiplying \$2.98 by 7. We have 7×8 hundredths = 56 hundredths. We write the 6 under hundredths. Then 7×9 tenths = 63 tenths, to which we add 5 tenths from the 56 hundredths, making 68 tenths, or 6.8. We write the 8 under tenths. Then $7 \times 2 = 14$, to which we add 6 from the 6.8, making 20, which we write to the left of the decimal point.

IV. TABLES FOR REFERENCE

LENGTH

12 inches (in.) = 1 foot (ft.)

3 feet = 1 yard (yd.)

$5\frac{1}{2}$ yards, or $16\frac{1}{2}$ feet = 1 rod (rd.)

320 rods, or 5280 feet = 1 mile (mi.)

SQUARE MEASURE

144 square inches (sq. in.) = 1 square foot (sq. ft.)

9 square feet = 1 square yard (sq. yd.)

$30\frac{1}{4}$ square yards = 1 square rod (sq. rd.)

160 square rods = 1 acre (A.)

640 acres = 1 square mile (sq. mi.)

A strip of land 4 rd. wide and 40 rd. long contains an acre.

CUBIC MEASURE

1728 cubic inches (cu. in.) = 1 cubic foot (cu. ft.)

27 cubic feet = 1 cubic yard (cu. yd.)

128 cubic feet = 1 cord (cd.)

A pile of wood 8 ft. by 4 ft. by 4 ft. contains 1 cord.

WEIGHT

16 ounces (oz.) = 1 pound (lb.)

2000 pounds = 1 ton (T.)

2240 pounds = 1 long ton, used sometimes for very heavy substances, such as ore.

LIQUID MEASURE

- 4 gills (gi.) = 1 pint (pt.)
2 pints = 1 quart (qt.)
4 quarts = 1 gallon (gal.)

DRY MEASURE

- 2 pints (pt.) = 1 quart (qt.)
8 quarts = 1 peck (pk.)
4 pecks = 1 bushel (bu.)

TIME

- 60 seconds (sec.) = 1 minute (min.)
60 minutes = 1 hour (hr.)
24 hours = 1 day (da.)
7 days = 1 week (wk.)
365 days = 1 common year (yr.)
366 days = 1 leap year
About 30 days = 1 month (mo.)
12 months = 1 year

VALUE

- 10 cents (ct. or ¢) = 1 dime (d.)
10 dimes = 1 dollar (\$)

TEMPERATURE

On the common (Fahrenheit) thermometer water freezes at 32° and boils at 212°. The temperature of the human body is about 98.6°.
