Fine Instruments For The Serious Woodworker

The sound of a Craftsman Contractor Series power tool may not be symphonic,
but it sure will be music to your ears.

The table saw featured here reflects our attention to details...
from our patented Exact-I-Cut alignment system to the dual voltage induction motor
that develops a full three horsepower.

After years in business, we know what it takes to satisfy the serious woodworker.
Every stationary tool in the Contractor Series was engineered to give you all the power
and accuracy you'll ever need for the most demanding project.

We invite you to see the many Craftsman features for yourself at your nearby Sears store.

CRAFTSMAN®
Only at Sears

CONTROL THE SPEED OF YOUR ROUTER - ROUT AT THE SPEED THAT GIVES THE BEST RESULTS WITH THE WOOD AND BIT YOU ARE USING!

NOW ONLY \$39.95 Order Item #200

FEATURES:

- Speed Adjustable from Full Speed to 0 RPM
- Full Horsepower and Torque at All Speeds
- Go Back and Forth from Any Pre-Set Speed to Full Speed at the Flip of a Switch
- Works with All Routers 3/4 HP or Less
- 120V 15 Amp
- Gives Your Router a Feature Only Available on Routers Costing Hundreds of Dollars!
- Less Tear Out
- Feed at Comfortable Rate
- Better, Safer Results with Large Diameter Bits
- Less Wear on Bits
- Less Noise and Softer Starts at Lower Speeds
- Stops Burning
- Reduces speed electronically without reducing torque; electronic feed-back maintains speed by increasing voltage to motor as load increases.

EASY TO USE - Simply plug in Speed Control and plug your router into the Speed Control - turn dial for best results. (Speed Control has a clip that can be worn on your belt or hung on wall or left loose.)

CARBIDE TIPPED ROUTER BITS PROFESSIONAL PRODUCTION QUALITY GUARANTEED WHEN ORDERING ANY THREE OR MORE DEDUCT \$1.00 EACH. ALL PRICES ARE POSTAGE PAID

Another "buy 1 tool get our 220 page tool free" offer.

Just a few of the unique woodworking tools of the 3,500 others available from our most versatile tool, the 1991 Garrett Wade Catalog.

The 220 page catalog is Free with any order from this ad. Or if you would just like the catalog, send us \$4.00 with your name and address.

A / 2 Band Saw Books by Mark Duginske

Learn what makes your bandsaw tick. Tune-up and maintenance; blade selection, tracking and tensioning; plus cutting methods for various woods and other materials. Hundreds of tips and shortcuts. Unlock your saw's potential.

02L09.03 Band Saw Basics \$ 9.95
16L04.02 Band Saw Handbook \$16.95

B / The Saw Setting Gauge That Can Be Read From Any Position

Most gauges have at least one or two main weaknesses. They either rest partially on the insert plate which is usually not the same height as the main table, or are so thin that it is difficult to ensure that teeth are being gauged at the top of the arc. This gauge is made from machined $\frac{3}{4}$ " thick Aluminum and is 9" long. With $\frac{1}{4}$ " graduations on one end and $\frac{1}{8}$ " on the other, it will indicate any height from $\frac{1}{8}$ " to 2". Most useful for table saws but also handy for routers. The markings are vertical on one face and horizontal on the other, so you can read them easily and accurately.

71K26.02 Saw Setting Gauge \$16.95

D / Our 202GF Gap Filling Glue Fills Gaps

It has a very high solids content so that small gaps in our joinery are actually filled - with strength. And the "squeeze-out" beads right up and chips off when dry. No soaking in to ruin finishes. Dries to a light tan. Water clean-up.

62J01.01 1 pt. 202GF \$ 6.95
62J01.03 1 qt. 202GF \$12.50

C / $\frac{1}{16}$ " Super Narrow Blades

You may have never seen a blade like this. A 24tpi raker style, it produces smooth cuts while making incredibly tight turns. We recommend using our Cool Blocks with these delicate blades, because they can be set closer to the blade without danger of overheating.

Cabinetmaker's Special Bandsaw Blades

A Garrett Wade exclusive. They look like "skip tooth" blades. But each tooth is actually formed as a hook, with every 5th tooth an unset raker. The result is a very smooth cutting blade that feeds easily. $\frac{1}{4}$ " blade is for general work, and $\frac{1}{2}$ " for resawing and heavy straight sawing.

93 $\frac{1}{2}$ " Blades (Delta 14" and copies)
33K11.01 $\frac{1}{16}$ " Scroll \$15.95
33K11.02 $\frac{1}{4}$ " (4 tpi) Cabinet \$11.95
33K11.03 $\frac{1}{2}$ " (3 tpi) Cabinet \$12.95

E / The "Blind Nailer" Used To Be A Staple In Every Finish Carpenter's Tool Box

This unique tool allows you to set nails or brads invisibly. Slip the special chisel, with its finger nail shaped cutting edge, into the positioning jig and tighten the clamping screw. Place the flat sole on the wood and strike the end of the chisel with a firm tap with the palm of your hand. The Blind Nailer will lift a perfect small chip from the surface. Hammer your nail or brad in and then glue the chip back in place.

44K01.03 Blind Nailer \$15.95

F / Special Bandsaw "Cool Blocks" Prolong Blade Life & Increase Accuracy

Made of a special graphite impregnated Phenolic laminate, this set of 4 replaces your upper and lower side blade guides. Cool Blocks run cooler and are more slippery than conventional steel guides. Since they can be set actually touching the blade, they give you better control of the cut.

WOOD®

THE #1 MAGAZINE FOR HOME WOODWORKERS

This issue's cover wood grain: Aspen

Cover photo: Hopkins Associates

FEBRUARY 1991

ISSUE NO. 41

CRAFTSMAN CLOSE-UP

Down-home dough bowls 25

Typically, you turn bowls, but John Sadler of Tennessee's Cumberland Mountains begs to be different. He shapes his rustic creations with a chainsaw and hewing hatchet.

CARVING PROJECT

The Norwegian bachelor farmer 30

Learn Scandinavian flat-plane carving while shaping our amiable, rough-hewn caricature. Send for the basswood blank for a head start.

Fat Cat™ front-end loader 34

Our rugged construction toy lets youngsters dig in when the going gets tough and scoop up soil, sand, and gravel—just like the real thing.

DEVELOP YOUR SHOP SKILLS

10 tips for improving your scrollwork 38

No need to scroll in the dark with this short course. It shows you how to sink your tool's teeth into any number of projects with great success.

Hardwood briefcase 40

Get down to business with the plans for this executive's companion. The end result will impress your associates—we guarantee it. Use our source for the hardware and liner.

A handcrafted legacy lives on 47

Meet a company that makes guitars for the stars the old-fashioned way—Martin Guitars of Nazareth, Pennsylvania, established in 1839.

IN SEARCH OF THE PERFECT FINISH

Lacquer that's music to your ears 52

When applied to musical instruments, a finish must sound as good as it looks. Discover Martin Guitars' formula for an exquisite, lasting finish.

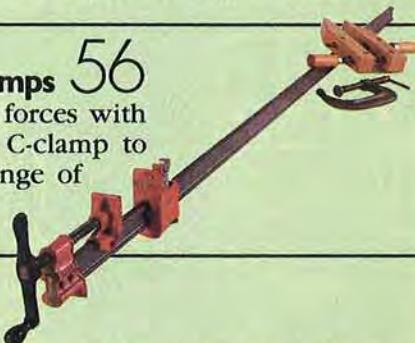

Super-simple tool transport 54

Allow your benchtop tools to roam by building our roll-around home for three. Casters and convenient handles make for easy mobility.

TOOL BUYNERSHIP

The smart shopper's guide to clamps 56

A new generation of specialists joins forces with the likes of the handscrew, bar and C-clamp to give woodworkers the widest-ever range of holding-power options.

TURNING PROJECT

Fanciful flowers 61

Don't wait till spring to surprise your favorite person with flowers when you can turn a beautiful bouquet from found wood in no time.

Arizona turning showcase 62

Selected vases and bowls prove the talents of this state's woodturners.

THE CRAFT SHOP

Ride the wind 64

You'll fly high after seeing our balloon wall plaque, and that's no hot air!

Graceful geese napkin holder 66

Country's come home to roost with this charming, one-evening scrollsawed project.

Cheery, cherry door harp 68

Dowels, not strings, support the wood balls that make this melodious project sing.

Washed-up wood 70

Business is picking up for a father and son who collect driftwood.

SURVIVAL GUIDE

Buying Forstner bits 72

Discover the quality difference between high- and low-priced bits

Cabinet, cabinet on the wall 74

Balanced in design from top to bottom, this cherry accent piece lets you perk up an otherwise plain-Jane wall.

Test your woodworking IQ 78

Sharpen your pencils and try your smarts on 18 challenging questions.

THE EDITOR'S ANGLE

Above: Just a few of the organizers in the WOOD magazine shop.

THE GREAT SHOP-ORGANIZER HUNT IS ON...

Left: You'll receive free a WOOD Cumulative Index just for entering, and you also may win one of these two impressive woodworking tools.

...AND WE WANT TO HEAR FROM YOU

Be honest, now. Wouldn't you like it a lot if your shop was just a bit more organized, a bit tidier? I sure would. And I think I've come up with an idea that can help all of us get our shops shaped up in a hurry.

Here's the plan. I'd like you to send in a snapshot of one or more of the best original ideas you've ever come up with to organize your shop—and the tools and supplies in it. (Be sure that you put your name, home address, and daytime telephone number on each photo.) Big solutions, small solutions—I'd like to see them all.

Just for taking the time to share your idea(s) with us, I'll send you a complimentary copy of the ever-so-handy WOOD magazine Cumulative Index (a \$4.95 retail value). You say you want more of an incentive? Then, how's this? If yours is one of the dozen ideas we select for publication in an upcoming issue of the magazine, you can choose

between a Delta 34-080 10" motorized miter box or a Ryobi RE 600 3-hp router (both shown in the photo above and valued at over \$250). Or, if you prefer, I'll write you a check for \$150 in payment for your idea. Not bad, huh?

OK, ladies and gentlemen, start your shop-organizer-idea engines. I'm counting on you for some really terrific input. Quebec residents not eligible. Send your entries (by April 1, 1991) to:

THE GREAT SHOP-ORGANIZER HUNT

c/o WOOD MAGAZINE
P.O. Box 11454
Des Moines, IA 50336-1454

P.S. I'll make sure you have your free Cumulative Index in hand, as well as notification about whether or not we have selected your idea for publication, by June 1, 1991.

Larry Clayton

New!

Variable Speed Super V-15" Scroll Saw

Dial any speed from 400 to 1800 cuts/min !

Saws with similar features sell for over \$700

Special introductory price...

only \$189.95

(item #SVS, UPS \$10)

Cut intricate patterns in many different types of materials with this versatile machine. Purchase includes many FREE extras.

This new model features a powerful, high quality electronically controlled universal motor that gives full power and torque at all speeds. Similar in design to our Super-15" model, the cutting action has been re-engineered to give smoother cutting and performance equal to saws many times the price.

Dial any speed from 400 - 1800 cuts/min to set the speed specifically for the job at hand. Use slower speeds for cutting plastics, metals and hardwoods.

FREE ACCESSORIES:

- Dust blower • 1 dz blades • EZ-Set permanent top-arm blade holder • 4 Standard blade holders • EZ Jig for attaching standard blade holders • Neptune 1-1/2" lettering guides w/6 patterns

Specifications:

- Motor: Universal motor w/electronic speed control. 110V, 1.3Amp, sealed ball bearings
- Speeds: 400-1800 cuts/min
- Throat: 15" deep • Stroke: 3/4"
- Tilt: 0-45° left • Cut Depth: 2"
- Blades: accepts pin and plainend
- Construction: cast iron

Scroll Saw Products

Super 15" Scroll Saw

Our most popular model. Same specs as Super V-15 model with single speed 1650 cpm motor, dust blower optional. Same free accessories as listed above.

#SAW ... Only \$119.95 (UPS \$10)

Japanese reader has yen for WOOD®

Your magazine greatly interests me and I would like to subscribe. Would you accept a credit card? Otherwise, I have to exchange Japanese yen for the U.S. dollar.

Woodworking has been my favorite hobby since I was a teenager. It started, of course, with Japanese-style hand tools. Power tools were introduced into my workshop in 1957, while I was living in Portland, Oregon. I have been strongly interested in wood turning, mostly bowls, because the turned products are clearly dependent on my skill. I look forward to retiring from my position as president of the University of Tsukuba in March 1993 when I turn 68.

—F.K. Anan, M.D., Tokyo

Thanks, Doc. Our circulation staff would be overrun if readers used charge cards for subscriptions and renewals, according to our circulation manager, Alan Brush. In the case of overseas readers, when currency exchange poses a problem, we can make an exception. Send a letter with information including your charge-account name and number, your name, mailing address, and signature to WOOD Customer Service, P.O. Box 10667, Des Moines, IA 50336-0667. We are pleased that our WOOD family extends beyond North America. See page 10 for further evidence.

Reader gets his bearings in Buffalo—and so can you

I have made many adjustable roller stands for my workshop and for my friends' shops. Instead of using wooden ends for the bearing in the end of the plastic pipe, I used 1½" pipe with a plastic bearing I bought through Buffalo Bearing (2205 Kenmore Ave., Buffalo, NY 14207).

Order item number 12P40D. The cost is \$1.60 plus tax. They also carry other types of rollers already made up for conveyer systems.

—Thomas Klass, Hamburg, N.Y.

Tom, thanks for your letter. We spoke to company president Greg Winkelman, who reminded us that the bearings should be ordered in pairs since two would be needed for each roller. The cost is \$3.20 per pair, plus shipping and handling and, for New York residents, an 8 percent tax. Buffalo Bearing, although not a woodworker's store, also sells router-bit bearings, shaper guides, and similar hardware. For information or for ordering, call 800-669-8019.

WOOD® readers are safe at home

A pair of sharp-eyed readers called our bluff regarding the September 1990 woodshop safety quiz, one with a letter concerning router setup, the other writing about circular-saw safety.

In reading your September issue, I noticed one potentially harmful situation in the article "How Safe are your Woodworking Habits?" Picture No. 1 displays the router bit being changed while the tool is still plugged in [as cited in the quiz answer], but notice also the position of the user's right hand. If it were to slip off the wrench, the protruding router bit could make an ugly cut on the bottom of his hand.

Solution: Some routers allow the base assembly to be lowered, safely covering the bit while still allowing access to the collet-locking nut. Or, secure the router, base assembly up, in a padded vice.

—William Young, Hopkinsville, Ky.

Bill, yours sounds like the voice of experience, and, as it turns out, you weren't the only reader to notice safety violations we overlooked. Read on.

When operating a circular saw, I always try to place the wide part of the saw shoe on the supported stock. Figures No. 5 and 6 on page 71 both show the wide part of the shoe on the piece that will fall away. With the wide part of the shoe on the supported piece, the saw will remain much more stable when the cut is completed, thus producing a cleaner cut and reducing the possibility of injury. Both pictures show a right-handed person using a left-handed saw.

Also, in shopping for a circular saw, I found that most of the cheaper saws are rated in horsepower, while the more expensive saws are rated in amps. This makes it difficult to compare the power output. Your October issue listed manufacturer's ratings for several power tools, but I am afraid that they may be using different methods to obtain the rating. The issue did a fine job of highlighting the features most useful in a power tool.

—Lester Bartel, Madison, Ala.

Looking good, Lester. The wide part of the saw shoe should, whenever possible, be on the supported stock. Of course, if a right-handed saw had been used for the photos, the setup shown would have been proper. As for horsepower ratings, our tool-buymanship specialist, Bill Krier, already is planning such an article in response to yours and other letters.

TALKING BACK

Recycle jigs by fastening with screws instead of nails

Thank you for the article "How to Transform Found Wood into Usable Stock," in Issue No. 37 (September 1990). For many years I have been looking for a way to true-up warped, bent, and twisted pieces of wood from my scrapbox. You have an elegant solution.

Why do you use nails to assemble the jig? I use drywall screws for almost every job, especially for jigs, which are sometimes used for only a short time. With screws I can more easily salvage the wood. Perhaps I am overlooking something.

As a senior on pension, I buy magazines from the newsstand, and only after checking each issue against several competing magazines. You will be pleased to know that my increasing stack of WOOD magazines strongly suggests that WOOD is indeed number one. Do not change anything.

—Colin Adams, Woodbridge, Ontario.

Colin, thanks for the kind words. Your point about using screws for jigs is a good one, especially if you might want to reuse the jig wood later.

Magazine makes its mark in Germany

During a stay in the U.S., I read some issues of your magazine. I'm so interested in it that I don't want to miss it in Germany. Two features particularly interest me. One is the wood profile, and the other is the Collector's-Edition tools. I already have made the try square and the clamps.

Can I get copies of magazines with any other Collector's-Edition tools? I would like to suggest for inclusion a German version of a carpenter's mallet.

—Egan Weeks, Nordenham, Germany

Egan, thanks for your vote of confidence in WOOD. And yes, we can provide you with the information you missed out on. The series began

with a sanding block (December 1986), followed by a depth gauge (December 1988), a hand scraper (April 1989), and a strip sander (August 1989). The handscrew clamp (June 1990) came next, and then we presented the try square (September 1990.) We detailed the center finder in the January 1991 issue. Yet another one in our line is on the drawing board even as we write. You can buy plans for any of these projects for \$2 each, or the back issue of WOOD containing the plan for \$4.95 each, postage paid, by writing to: Back Issues, WOOD Magazine, P.O. Box 11454, Des Moines, IA 50336-1454. We accept VISA, MasterCard, check, or money order.

Carvers take shine to elusive polish

Thank you for the article on Santa by Ron Ransom in the December 1990 issue. I have sent for the full-sized pattern. My question is,

"where do you purchase Griffin Shoe Polish?" I have been unable to find it, and some stores have told me

they are out of business. Could you find out where Mr. Ransom purchased this product, or maybe he can recommend a substitute. I would appreciate any information you can forward to me.

—Mary Post, Lake Orion, Mich.

Mary, you are not alone in your search for the Bark-Brown Griffin Shoe Polish recommended by

carver Ron Ransom as an antiquing finish.

David Draves, senior merchandise manager at Woodcraft Supply Corp. in Boston, reports that his company could have sold more than 300 cans of the polish since September—if they had stocked it.

Some shoe repair professionals we talked to never had heard of it, while others thought Griffin had gone out of business long ago. Not so, says Draves, who located the company in Central Islip, New York, and arranged to sell that elusive product as a mail-order item.

A 1 15/16 oz. can of Bark Brown, catalog No. 50I08, or Neutral Paste Wax, catalog No. 50I09, costs \$2.50, plus a \$4 shipping and handling charge. To order, call 800-225-1153 or write to Woodcraft Supply Corp., P.O. Box 1686, Parkersburg, WV 26102.

Smaller vacuum hoses need taming, too

On page 26 of the September 1990 issue, you recommended a Sears hose lock for use on shop vacs. I tried to buy a hose lock in a smaller size at Sears, but they only make them in the large (2 1/2") size. A lot of us hobbyists use the small shop vac with the 1 1/2" hose, so I resorted to another idea. I simply used self-adhesive Velcro™. By coiling the hose into its stored position, I was able to determine where on the hose end to stick one piece of Velcro™—put it where it won't interfere with any attachments—and where on the vacuum to stick the matching piece. It works beautifully.

—William McCollum Oakdale, Minn.

Now, Add Instant Earning Power To Your Shop!

Craftsmen everywhere are using the low-cost Woodmaster to bring in welcome extra cash and to save on all their lumber needs. You can, too!

With the new 18-in. Woodmaster or the standard 12-in. model, you can quickly convert low-cost rough lumber into valuable finished stock. You can turn out perfect picture frame moldings, crown, bed and base moldings, tongue & groove, door and window trim...all popular patterns...any custom design.

You can do custom work for friends, neighbors, lumberyards, picture framers, home remodelers, hobby shops and businesses.

Because it takes just seconds to convert a \$2 rough board into \$10 worth of finished trim, you can see why so many Woodmaster owners enjoy substantial extra incomes!

Variable Speed Makes The Difference!

Just a twist of the dial gives you perfect control for planing, sanding or sawing...from 0 to 1,000 cuts per inch. Creates mirror-smooth molding with no sanding required!

Here's what Woodmaster owner L.C. Griffin of Los Angeles writes: "The shop test article in *Wood Magazine* that said they loved your Variable Feed Rate is what sold me. They were right."

Call or write today for free facts on how you can try this American-made tool in your own shop for one full month. Easy terms.

Woodmaster's Quick-Change Molding Head lets you create custom moldings from any stock. Choose from over 250 standard trim and picture frame patterns...or design your own!

Power-fed sanding speeds production and improves the quality of your work. No ripples or cross-grain scratches. Separate sanding head installs in just minutes.

New ripsaw attachment lets you gangrip with power feed in a fraction of the time it takes for multiple hand-fed passes on an ordinary table saw.

EARN CASH, PRIZES FOR YOUR TOP SHOP TIP

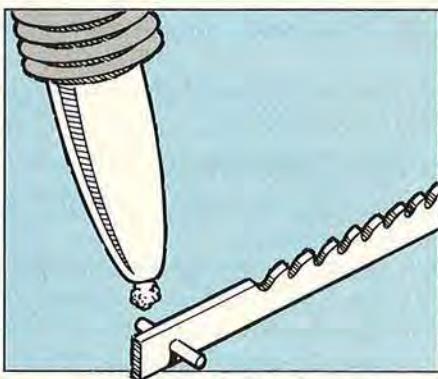

Do you have a great shop tip (or two) you'd like to share with other WOOD® magazine readers? For each published submission, you will get at least \$25 from WOOD magazine (up to \$200 if we devote a page or more of space elsewhere in the magazine to your idea). You also may earn a woodworking tool for submitting the top shop tip for the issue.

We try not to use shop tips that have appeared in other magazines, so please send your tip to only one publication. We cannot return shop tips. Mail your tips, address, and daytime phone number to:

Top Shop Tip
WOOD Magazine

Des Moines, IA 50336-1454

An answer for loose scrollsaw-blade pins

Many woodworkers prefer pin-type scrollsaw blades because they mount so quickly and easily. Unfortunately, the pins occasionally work themselves loose from the blades.

TIP: Add a drop of Locktite or cyanoacrylate (instant) glue to each side of the pin and allow to dry overnight. That's it—no more loose pins to worry about.

—R. I. Smith,
Halifax, Nova Scotia

Put a grinding halt to motor costs

A motor adds mightily to the cost of benchtop power tools such as grinders, buffers, and strip sanders. Since you can't use more than one of these machines at once, it's a shame to tie up a lot of money in a motor for each machine.

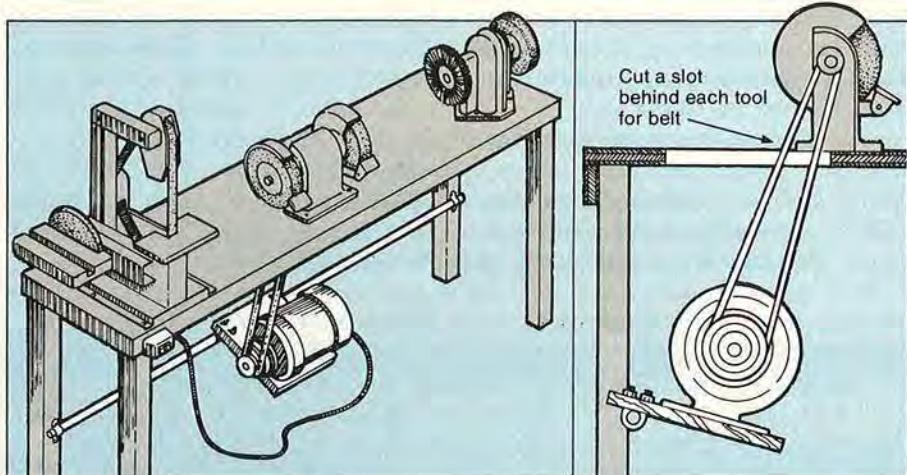

For his tip,
Dennis receives a
Porter-Cable
model 693 router.

TIP: You can mount these benchtop tools alongside each other and run them with one motor that slides from tool to tool as shown below. Fasten a $\frac{1}{2}$ -1 hp motor to a length of $\frac{3}{4}$ " pipe with eye- or U-bolts and a plywood base.

Add a step-down pulley to the motor and a switch along the front of the bench. Cut holes into the bench top for the belts to run through.

—Dennis Baer, Fayetteville, Ga.

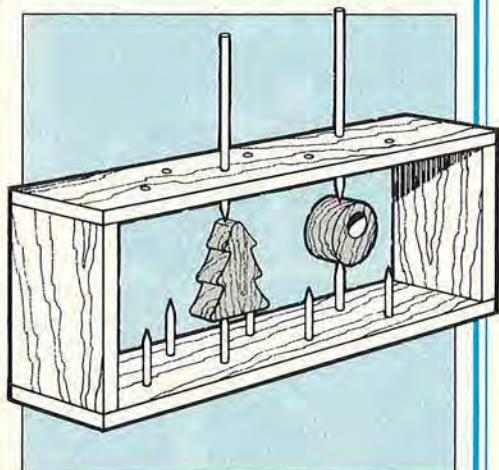

Another solution for small-part finishing

Painting, staining, and finishing small pieces frustrates most woodworkers because the objects refuse to stay put as you brush or spray them. Using your fingers to hold the pieces can be messy, and the finish may adhere to your work surface.

TIP: Build a finishing box such as the one shown at right. From $\frac{3}{4}$ " stock, cut the sides, top, and bottom of a $4 \times 10 \times 20$ " box (or larger if necessary). Clamp the top and bottom pieces together and drill $\frac{1}{4}$ " through holes simultaneously to ensure alignment. Unclamp the assembly, and epoxy $3"$ lengths of $\frac{1}{4}$ " steel rod with sharpened points into the bottom holes. Enlarge the top holes just slightly to permit free, but not sloppy, up-and-down

movement of 8"-long sharpened rods. With the box assembled, you can coat small pieces of most any shape without fear of fingerprints and smudges.

—W.P. Locke, Huntington Beach, Calif.

Making the most of masking tape

If you only use masking tape for painting tasks, you've just scratched the surface of potential applications.

TIP: As shown in the three examples below, you can use masking

tape for many marking and alignment tasks. Here, we lay out the position of a hinge, mark the cutting lines for a slot after drilling the two end holes, and align letters on a wood surface. Unlike pencil marks, the masking tape lifts off easily.

—From the WOOD magazine shop

Struttin' your stuff for smoother planing

Many planers have infeed and outfeed tables that provide little support for long stock. Extension tables help, but you need to level them with the planer tables.

TIP: You can minimize chances of snipe at the end of your boards by building hinged extension tables such as the one shown below. These work well with planers that have stationary tables.

A hydraulic press works nicely for flattening the pipe ends, but you also can do the job with a hammer. Once assembled, adjust the pitch of the extension table by turning the $\frac{1}{4}$ " nuts. With a level or long straightedge, check to make sure the planer table and extension table form a single plane. These homemade struts also work well to support extensions for radial-arm saws and tablesaws.

—John Patton, St. Louis

Foldaway tabletop extender for bandsaws

Most bandsaws come with small tablespots that don't adequately support large workpieces. You could bolt on an extension table, but what if you work in tight quarters and can't afford the space?

TIP: With $\frac{3}{4}$ " plywood and drop-leaf hardware, you can fashion an extension table. When not needed, the table drops to the side of the bandsaw.

—Ray W. DeVore, Caledonia, N.Y.

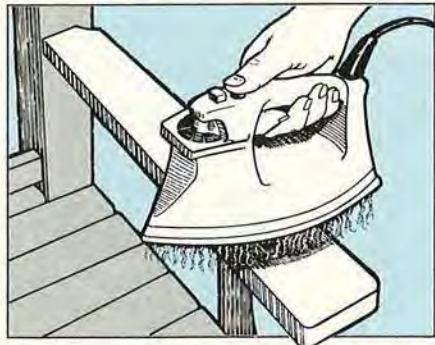

A steamy solution for wood indentations

Small dents often crop up on the surfaces of workpieces before you complete a project. You could fill the indentations with putty, but these repairs rarely blend in naturally. Applying a wet cloth to the dent and heating it with an iron sometimes raises the wood fibers, but not always.

TIP: With a hand-held clothing steamer or iron, shoot some steam onto the affected area. The steam will raise the wood fibers of shallow indentations, allowing you to re-level the area with a little sanding.

—Kerry Kumlien, Milton, Wis.

TIPS FROM YOUR SHOP (AND OURS)

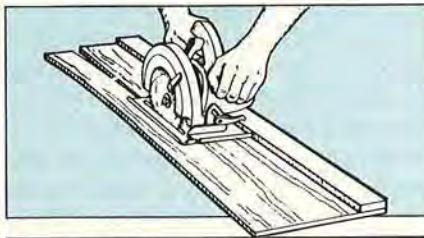

Continued from page 15

This straightedge helps you rout and rip accurately

A straightedge aids ripping a large sheet of plywood with a portable circular saw, or routing dados into a panel, but it takes time to adjust the straightedge so the blade or bit cuts exactly on your layout line.

TIP: Make a smarter straightedge by gluing a 2"-wide strip of $\frac{1}{2}$ "-thick stock to an equally long piece of $\frac{1}{4}$ " plywood or tempered hardboard. Both pieces should be a few inches longer than your longest cuts, and the $\frac{1}{4}$ " piece should be wider than the distance from your saw's blade (or router's straight bit) to the edge of the tool's base. When the glue dries, rip or rout the $\frac{1}{4}$ " stock as shown below. Now, you can align this just-cut edge with your layout mark and know where the cut will start.

—Roger Boulet, Winnipeg, Manitoba

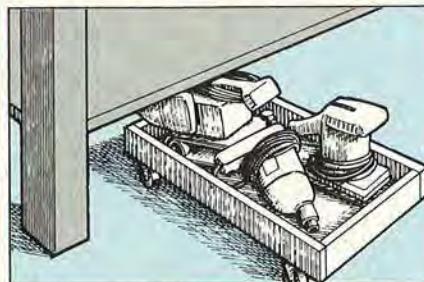

A handy storage spot for your tools

Tools that get occasional use don't deserve premium bench or shelf space in a tight-quarters workshop. Where do you put them?

TIP: Make better use of available space by storing tools on carts that roll under your bench as shown below. Assemble the cart from $\frac{3}{4}$ " stock for the sides, $\frac{1}{2}$ " plywood for the bottom, and four casters.

—Janeil Johnson, Whitehorse, Yukon

One giant try square

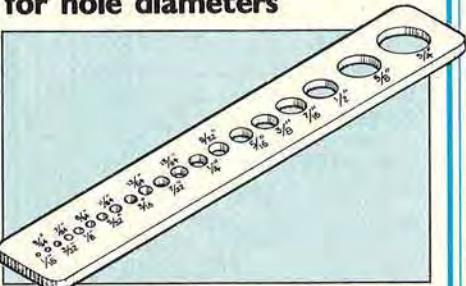

How many times have you worked on a large project and wished you had a try square as big as a carpenter's framing square?

TIP: By adding blocks of wood as shown below, you can convert a framing square into an oversized try square for those big jobs. First, cut the blocks to size from $\frac{1}{4}$ " - $\frac{3}{4}$ " stock and clamp them in position on the

—Leslie Douette, Prince Edward Island, Canada

square. Then, drill $\frac{1}{8}$ " holes completely through the blocks and square blade. Remove the clamps, scuff the blade with 80-grit sandpaper, apply epoxy glue to the mating surfaces, and reassemble. Insert $\frac{1}{8}$ " brass or steel pins of the appropriate length. Hold the assembly together with masking tape until the glue sets, then sand the pins flush with the surfaces of the blocks.

Quick reference for hole diameters

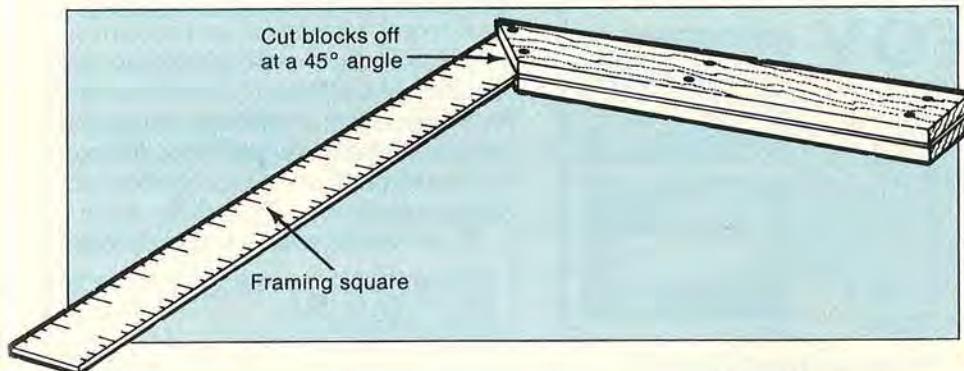

How many times have you stared at a drill bit, dowel, bolt, or one of a million other workshop tidbits and tried to guess its diameter?

TIP: Drill holes of graduating sizes as shown above into a piece of scrap plywood ($\frac{1}{4} \times 1\frac{1}{2} \times 18$ " works fine.) Now, you can quickly determine the diameter of all those odds and ends. Don't forget to carry this handy aid to the store to help you make the correct purchase.

—Jackie Ramirez, Long Branch, N.J.

TIPS

FROM YOUR SHOP
(AND OURS)

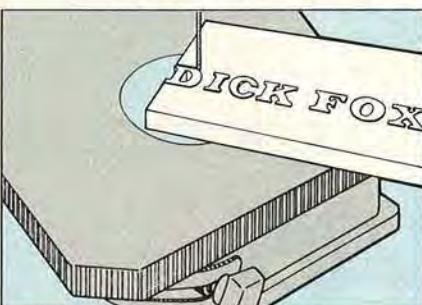

Continued from page 17

Scrollsawing small letters

Stencils and templates work fine as guides for scrollsawing 1" or larger letters, but not so well for smaller letters—if you can even find small sizes. Accurately marking smaller letters with a pencil and following those layout lines with your scrollsaw can prove taxing.

TIP: Purchase vinyl press-on letters from office-supply or art stores. The letters come in many different sizes, styles, and colors. Once applied to the wood, you can follow the outline of these letters easier than you can split a pencil line. To remove the vinyl, gently lift the letters with an X-acto knife, or sand the surface of the letters after mounting them to a workpiece.

—Dick Foxworthy, Widefield, Colo.

More tips from our woodworking pros

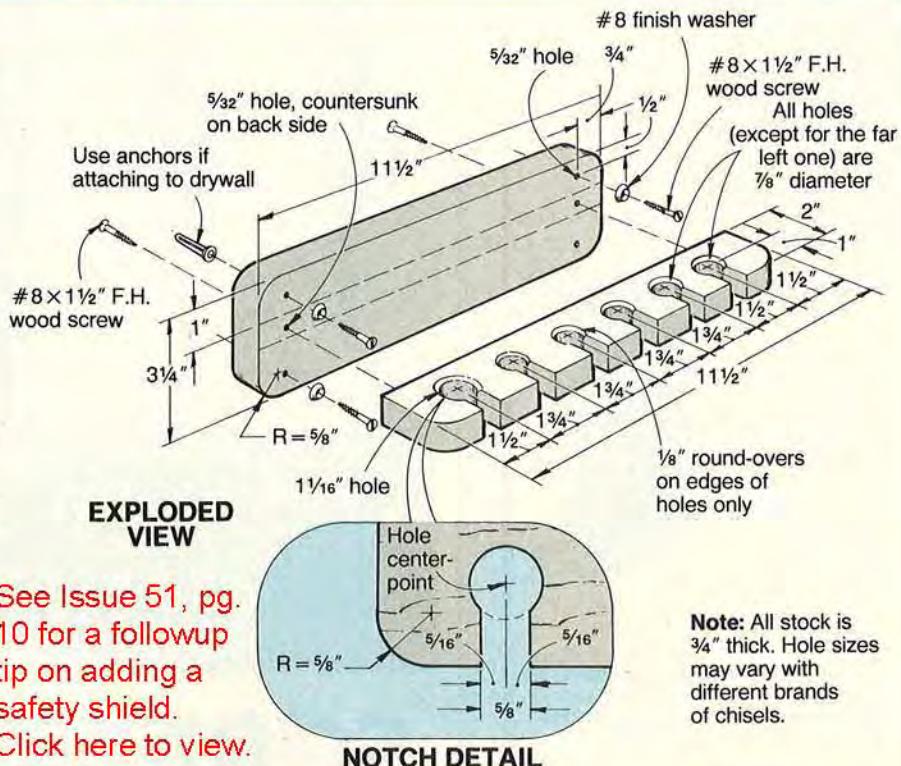

You'll find more useful shop tips scattered throughout this issue of *WOOD* magazine:

- For a simple, shop-proven box-joint jig, see page 42.
- You say you've got only one rabbet bit and it's the wrong size for your project? Try the method shown on page 42 for placing spacers between the workpiece and the rabbet bit.
- Attention toy builders: See page 36 for a simple way of producing wheels.
- To keep faceplate screws away from your turning project, attach a wooden auxiliary faceplate as shown on page 61.
- For a simple technique to make a project look aged, see the finishing method on page 66. ♣

QUICK-AS-A-WINK CHISEL RACK

Sometimes, the best ideas are also the simplest. For this handy little shop project, we went to our scrap pile for the material and invested about a half hour of shop time. Now, we have a top-notch rack for our chisel set.

See Issue 51, pg. 10 for a followup tip on adding a safety shield.

SCREW DRILLS

Tired of drilling four separate holes—one for the pilot, another for the screw shank, a third for the countersink, and yet another for the plug—to keep wood screws from cracking your project? With one of the screw-hole bits on the market, you can drill all four holes in one easy step.

Sizing up screws

Regardless of size, screws have the same basic components: the head, shank, and threads. A screw-hole bit accommodates all three. As shown *above*, the screw head fits into the countersink. Drill deeper to counterbore if you wish to plug the hole. The shank hole houses the nonthreaded portion of the screw. At the bottom, the pilot hole is the same size as the root diameter—the diameter of the screw between the threads—of the screw. Here the threaded portion of the screw takes hold and bites into the wood.

The all-in-one answer to perfectly prepared screw holes

The choice: A one- or multiple-piece bit

The screw-hole bits on the market today fall into one of two categories: one-piece bits and multipiece bits. The differences are worth learning about.

You'll find *one-piece bits* (see the bit on the far left *above*), usually made from tool steel, in sizes ranging from #4 to #12. One-piece bits are limited to drilling a specific screw size and length. Optional stop collars control the depth of the countersink and counterbore. To fit several screw sizes and lengths, you'll need a handful of one-piece bits.

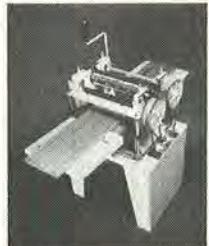

Multipiece bits have a blade or a high-speed twist-steel bit to drill the pilot hole. Note that the General Screw Drill and the General S-10 shown *above* both have pilot blades; compare each with the taper drill pilot of the Fuller Type "C" Countersink. An adjustable, locking collar fits over the pilot bit to cut the hole for the screw shank and countersink.

Stop collars control the depth of the countersink/counterbore.

Multipiece bits (\$8 to \$12 each) cost about two times more than one-piece bits (\$4 to \$6 apiece). However, they have several advantages over one-piece bits in that each multipiece bit adjusts for several screw lengths by moving the locking collar on the pilot bit. They also tend to cut cleaner with less burning.

Rhode Island manufacturer W.L. Fuller, Inc., offers a tapered twist drill bit, shown on the far right in the photo at left. According to company president Warren Fuller, the tapered bits drill a hole proportioned to the shape of the screw. The screw drives easily, yet provides holding power the entire length of the thread.

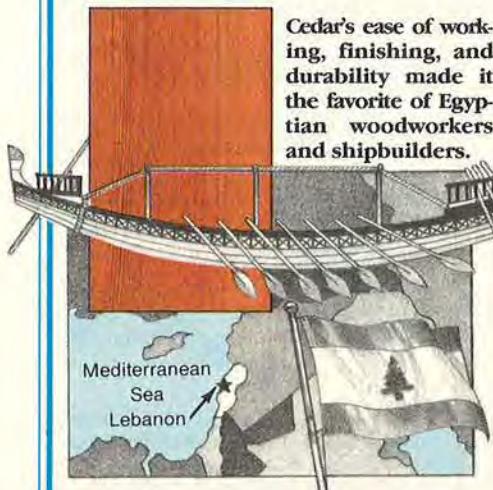

You can use both types of bits in either a portable drill or drill press. We suggest drilling at slow speeds (250-500 rpm). Gradually feed the bit into the wood and clear the bit often to prevent heat build-up. Forcing the bit causes it to overheat and burn the wood. In repeated heavy use, the pilot tips of one-piece bits can get hot, lose their temper, and snap off in the workpiece.

What bit's right for you

If you occasionally drill just a few holes for standard-size screws, a one-piece set of four bits, at about \$10, will do.

If you drill lots of holes, use many different screw lengths and sizes in your projects, or work primarily in hardwoods, you'd be much better off investing in a multipiece set. Four-bit sets (for #6, #8, #10, and #12 screws) with straight-shanked pilot drills cost about \$13. A set of four tapered bits with countersink collars costs about \$35. For about \$60, you can get a tapered-bit set that includes plug cutters to drill the right-sized plug for filling the counterbored screw hole.

THE WOOD OF THE BIBLE

Of the many building materials used in the ancient world, one stands out—the cedar of Lebanon (*Cedrus libani*). Wood historian Albert J. Constantine, Jr., in his book *Know Your Woods* (Charles Scribner's Sons, New York, 1975), says the Old Testament alone cites it nearly 50 times. Psalms 92:12 states, "The righteous shall flourish like the palm tree: he shall grow like a cedar in Lebanon."

In Lebanon and Syria during those early times, vast cedar forests grew. And there's no doubt that this Lebanese cedar was impressive. A mature tree could stand 120' tall and 8' in diameter. However, neighboring countries that were not similarly blessed coveted the towering timbers.

The Egyptians, for instance, drew heavily on the Lebanese cedars.

During the reign of Pharaoh Snefru alone (2,000 B.C.), it is recorded that a fleet of 40 ships carried Lebanese logs to Egypt.

There, laborers hewed the cedar into timbers for royal river barges and seagoing vessels. An entire ship discovered by archaeologists inside a pyramid in 1954 contained cedar planks 75' long and 5" thick! Egyptian cabinetmakers and carpenters favored cedar of Lebanon, too, because of its workability and aroma. In fact, ancient tombs containing expertly crafted cedar furniture, shrines, and coffins bear this out.

Today, remnants of the once-vast cedar forest remain protected in the Cedars of Lebanon National Park, located about 90 miles north of Beirut. And the Lebanese still revere the tree—it appears on their flag as a national symbol.

PARAGAUGE™ THE PERFECT SHOP ACCESSORY FOR ANYONE WHO OWNS A TABLE OR RADIAL ARM SAW

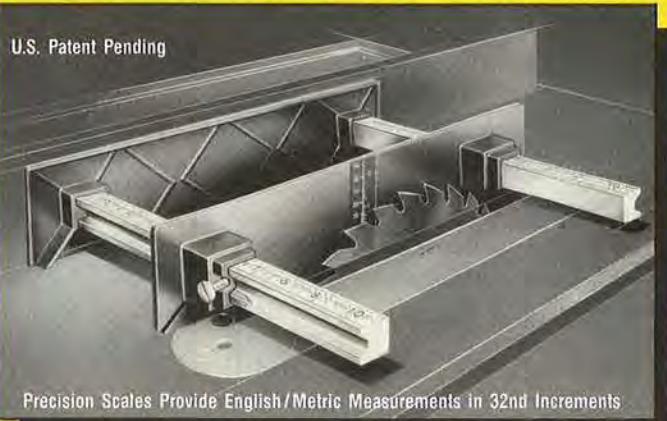

Designed for both the home and professional shop, Paragauge will accurately set any table or radial arm saw so precise that anyone can now cut wood accurate to within 10/1000"— virtually eliminating binding, burning and dangerous kickback.

Easy-to-follow directions show how to use **Paragauge** for setting a perfectly parallel rip fence (up to 18 inches wide), setting inside bevels and setting blade height. Radial arm saw owners can use **Paragauge** as a square for crosscutting, setting the width for ripping, setting blade depth and even check for table levelness and heel in horizontal position. **Paragauge** is so versatile and accurate everyone can now cut wood with professional quality results.

Paragauge also saves the cost of upgrading to a new saw or adding an expensive parallel-locking fence to your current equipment!

A Proven Performer

NOTE: We suggest that Model PG-18 only be used on table tops measuring at least 36" wide. For smaller saws or when using the gauge on a radial arm saw, Model PG-12 is recommended.

IN TENNESSEE'S CUMBERLAND MOUNTAINS,
JOHN SADLER CONTINUES A PIONEER TRADITION

DOWN-HOME DOUGH BOWLS

 Print this article

John Sadler helps his wife, Linda, roll out biscuit dough in their 1800s-vintage cabin down in Billy Hill Hollow.

Paul Warner, a reader from Perry, Georgia, sent us quite a letter awhile back. Paul, a woodturner, had met a fellow craftsman who impressed him—so much so that he suggested an article. Taking his advice, we traveled to central Tennessee to visit bowl maker John Sadler and Linda, his wife.

There, in the ridged country around Bradyville, we found a 20th-century man sharing time with the past. At

day's end, John, a plumber by trade, walks into the last century to practice a craft mastered by his great-grandfather and grandfather before him.

Deep in a wooded hollow behind the family ranch house, John, 47, cleaves wood and works it into the large bowls that generations have used to mix the daily dough. For him, the work has become a link to simpler times. To others, his bowls represent examples of old-time craftsmanship.

Continued

Rugged people settled the Tennessee hill country. They scraped a living off the land, planting crops of corn and cotton in clearings hewed from the forest. Luxuries were rare, and skills became commodities to trade for necessities.

"Nearly every community back then had a blacksmith," says John Sadler, his drawl softening the spaces between words. "There was somebody who built barns, and one who made bowls, and like that. And it's my understandin' that they generally swapped out rather than bein' paid."

John pauses to refresh his pinch of snuff, then continues. "Boy Lemons was a right handy old bowl maker in these parts—he taught my kin. He lived up at the top of the hill there, in what we called Old Boy House. That house was so open. Why, my Daddy said you could throw a cat through the roof and count chickens through the floor. Hard to believe

people was raised like that, but they made do."

Today, only crumbling supports mark the site of Boy Lemons' house. And, according to John, the dough bowls Boy made from buckeye or yellow poplar have vanished, too—no doubt worn thin, then through, from twice-a-day biscuit making over the years. But, just as stories from yesterday have passed down, so has the bowl-making tradition—from grandfather directly into the hands of John Sadler.

Whistling up dead man's wood

Out of every 100 dough bowls John makes annually, about 30 will be of buckeye—a white, easily worked wood—and the rest come from cherry, butternut, black walnut, and some persimmon. In the old days, bowl makers didn't offer such variety.

"My granddaddy, when he made bowls, used buckeye," John

says. "It's native to this part of the country, it's soft wood, and light. The womenfolk, you know, didn't want a really heavy bowl to tote. Buckeye's a hill tree—you won't find it in the flat country very often. At one time, it went for making caskets. That's why some of the old-timers around here still call it 'dead man's wood.'"

In the hill country, "whistlin' up" means to fetch, gather, or get, and it covers how John obtains much of his bowl wood. Yet, it doesn't always come for free.

"I always keep my eye out for a good tree, even when I drive to work," John explains. "Folks around here know that I make these bowls, and volunteer where there might be a good tree. I do run across a deal once in awhile. Why, matter of fact, I've traded two, three bushels of apples for a walnut tree. They's my wife Linda's apples, of course," he adds, the family humor in the tale evident on his face.

John's dough bowls come in round, oval, and the traditional oblong shapes, and in buckeye, butternut, cherry, and walnut. He also makes breadboards and rolling pins to match.

John ambles over to a BIG log, and kicks away the protective sawdust piled against one cut end to expose dark orange wood. "I was looking for some white walnut [butternut] on an old boy's place down in the barns [barrens, flat country] when I spotted this big old cherry," he says. "I've made a deal with the wife to make her some bowls in exchange for the tree. That's how this wood come about—one of the biggest cherries I've worked—it'll turn out 25-30 bowls."

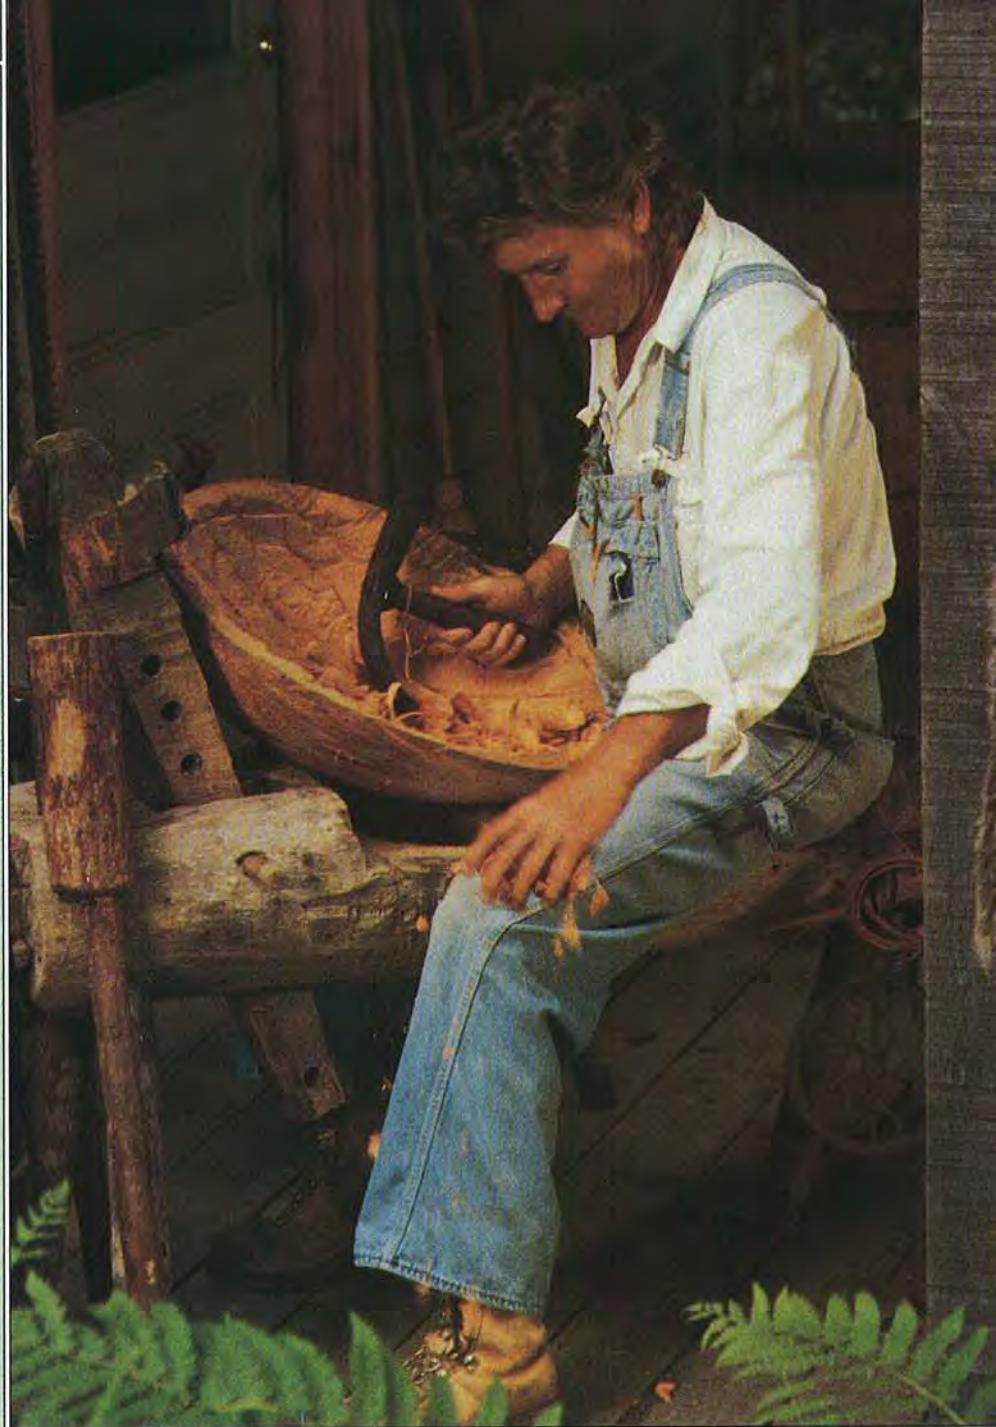

What does a good bowl tree look like? Quite different from one destined for furniture stock. Says John, "The main thing is size, 'cause you cain't get a big bowl out of a little tree. And, you'd think that a real straight log would make the prettiest bowls, but many times that's not the case. Some of the best lookin' cherry bowls I've made came from an old rough log that my brother-in-law give me. Before I was makin' bowls, I wouldn't have carried it home for firewood—lots of knots. But, when I opened that log up, I found I could ease a bowl right up to a knot or a defect, and pick up a lot of curly grain."

Down in Billy Hill Hollow

As a stone rolls, it's about 200 yards from John and Linda's home atop the ridge to the cabin in the hollow. By foot down the switch-backed road, it's twice that.

The cabin rests in the shade of tall tulip poplars. A brook tinkles by. Ferns flourish. A split-rail fence defines the yard-turned-work-area. And although the building is less than 10 years old, it looks as if it has always been there. A high-pitched, tin-covered roof, wide-open pillared porch, and stone steps mark it as down-home. John seeks seclusion there to hew his bowls, and keep touch with his roots.

"There was an old feller by the name of Billy Hill—in fact that's

John likes to rough-shape his bowls at his cabin in the hollow. There's no telephone to interrupt him as he works the inside of the bowl with a hand adz.

what we call this place now—Billy Hill Hollow. Yup, he got out a corn crop and raised a family down here. When I built my cabin, I thought of him," John says, introducing his hideaway. "There's no electricity, just kerosene lamps and a wood stove. I don't have to listen to phones a-rangin', or worry about someone's leaky faucets. I built the cabin to look like it just growed here."

John stops, letting nature's sounds briefly take over—a whip-poorwill's call, wind in the poplars, water over rocks in the brook. "You step back in time when you come down over the hill. It makes me feel a little bit closer to my raisin'."

And, for working wood to make his bowls, John doesn't need electricity in the hollow. Boy Lemons would approve.

Continued

Shaping up a dough bowl

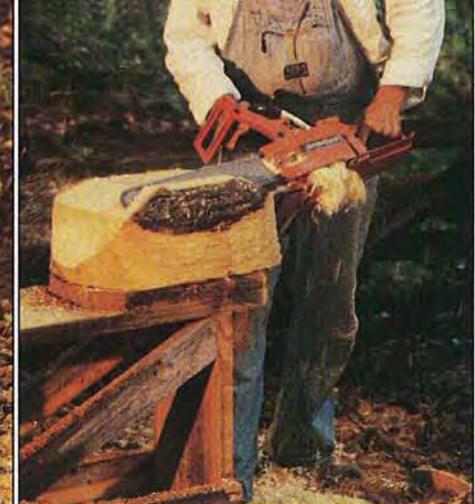

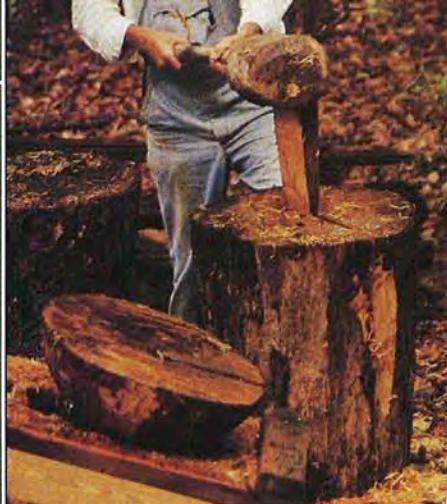

"As Boy taught him, Grandad would have cut the log off with a crosscut saw, then split it open with a maul and a large wedge called a glut," John says, describing the hand-me-down methodology. "Probably, he would have used a broad ax to work his bowl down into a chunk. Next, he'd have stepped up to a hewing hatchet—sharp on one side—to shape the outside of the bowl, then maybe a hand plane. On the inside, he'd work with a hand adz and a scorp. To smooth it up, he'd have sanded with a piece of glass or pottery. Old bowls won't be slick," he adds, "just smooth enough to keep from gettin' a splinter in your hand."

For roughing out his bowls at the cabin, John substitutes a chainsaw for much of the ax, hewing hatchet, and adz work. But, the process begins almost as it did 100 years ago.

"I used to take my logs to a local sawmill to open up, but it got so that those old boys would see me comin' and just shake their head," says John. "So, I've been doing it myself, sawing off two-foot chunks and splitting them with a chainsaw part way, then taking a glut and a maul to rive them open. I can read the grain better, anyhow," he says, bending over to run his hand across the clean, cut end of a walnut log. "Trees are just like human beings, you know, they're not perfect by no means. Often the heartwood will be at different places from one end of the log to another."

John's dough bowls run big—a standard oblong one measures 23" long, 15" wide, and about 6" deep, with $\frac{3}{8}$ "-thick walls. It takes a good-sized tree for raw material because he won't use the pith ("I step back from the heart at least two inches").

With the split chunk of wood before him, John begins rough-shaping. "Just like buildin' a house, with bowl carvin' you got

With a glut and a one-piece maul made from hickory, the bowl maker opens up a butternut log.

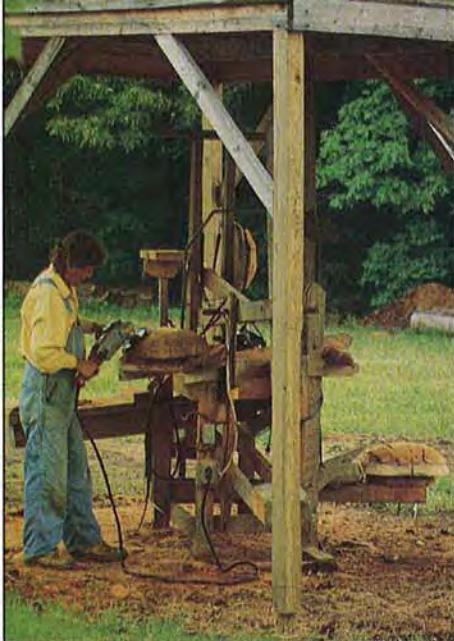

After drawing the bowl's rim outline on the wood, John shapes the outside by shaving with his chainsaw.

With a technique similar to cutting a mortise, the craftsman saws deep incisions, then clears them away. The bowl won't shift in the form-fitting saddle.

Sitting on the steps of his cabin, John cleans up uneven surfaces on the outside of his bowl with a hewing hatchet.

Situated near the house, John's outdoor shop with its different workstations resembles a merry-go-round.

Grinding, then sanding, removes all the saw and adz marks from the bowl, as well as fine-tunes the shaping.

After belt-sanding, John hand-sands with 320-grit paper for super-smoothness, all the while taking off tiny high spots that his hands notice.

"It makes sense to put tree oil on a tree," says John about his walnut-oil finish. Pioneers left the bowls unfinished, or rubbed in lard.

to start with a good foundation. And my foundation is the rim."

A template gives him the bowl outline, which he draws on the wood. Then, with $\frac{3}{4}$ " deep plunge cuts of the chainsaw, he follows the pattern. From there, he takes the bowl over to the shaving horse where he clamps it in place and makes angled cuts to trim the ends and sides, as shown in the photo, *opposite page, top right*.

John's practiced eyes know exactly how much wood to take off to keep the bowl in proportion. Once he has worked the outside to form, he turns over the bowl-to-be, sets it in a form-fitting, custom-made saddle to hold it steady, and commences to cut out the inside, as shown *opposite page, center*. He trims with the hand adz.

Finally, the bowl—its walls whittled to $\frac{3}{4}$ " thick and the bottom to about $1\frac{1}{2}$ "—is ready for the curing shed, a storm cellar next to the house. "Open-grain woods like buckeye," John notes, "cure out in $2\frac{1}{2}$ to 3 months. Cherry and walnut take twice as long. And, no wood moves enough while dryin' to hurt the appearance. When I go to finishing, I can shape it up. Course," he adds, "I leave the rim uneven so it won't look machined."

A tree-to-tree finish

At his electrified workstation atop the hill, John smooths up his cured bowls. He removes saw and adz marks from the inner and outer surfaces with power tools, and finally hand-sanding, see photos *left*, with grits from 60 to 320. "All the time I continue to shape that bowl," John says.

John believes most bowls were left unfinished. That won't do for his, however, since those who pay \$150 to \$250 for them want a display piece. "I've used olive oil and mineral oil, but walnut oil accents the grain the best," he says. "And, it seems natural to put a tree oil on a tree."

THE NORWEGIAN BACHELOR FARMER

A ROUGH-HEWN CARICATURE THAT TEACHES YOU SCANDINAVIAN, FLAT-PLANE CARVING

Flat-plane carving had its origins in the rustic and rugged peasant carvings done in Scandinavia 150–200 years ago, according to Harley J. Refsal, carver and instructor in Scandinavian folk art at Luther College, Decorah, Iowa. “The style takes its name from the flat planes created with the knife cuts, a technique that at first glance seems rough and unsophisticated. But, the knife marks that shape the piece become a part of it—when you take away wood with the blade or gouge, you create an element,” he explains. “A cut to remove wood from the leg becomes a heavy crease in the pants. In flat-plane carving you don’t shape the figure, then go around putting knife cuts in to smooth it.”

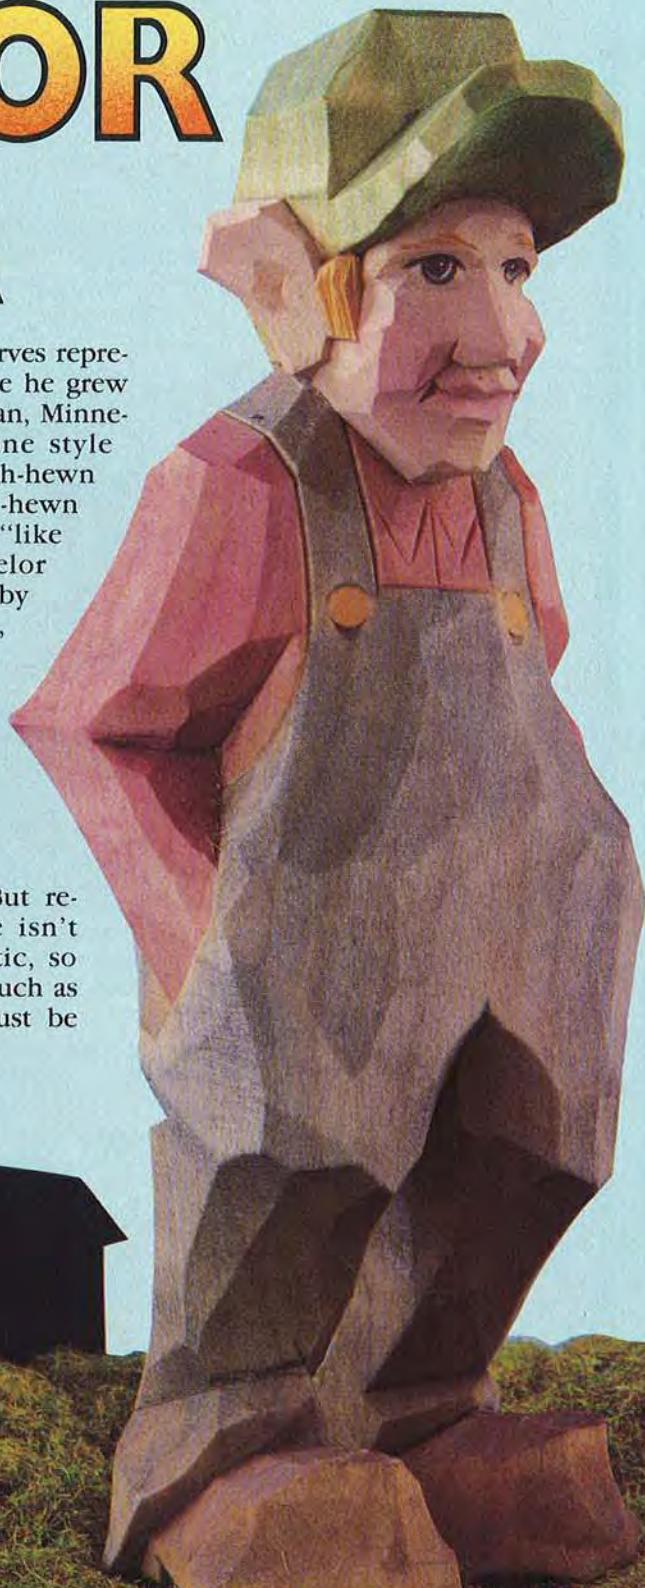

Harley learned flat-plane carving in Norway in 1965, and has practiced the style ever since. In fact, in 1989 and 1990, he returned to the land of its origin to teach the technique to Norwegians—all the folk-art carvers had passed away.

The figures Harley carves represent the kinds of people he grew up with in rural Hoffman, Minnesota. And the flat-plane style suits them. “It’s a rough-hewn way of depicting rough-hewn people,” Harley says, “like this Norwegian bachelor farmer, made famous by Garrison Keillor’s book,

Harley Refsal

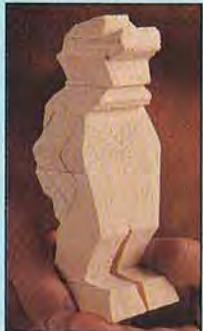

Lake Wobegon Days. But remember, a caricature isn’t supposed to be realistic, so features that stick out, such as ears, feet, cap, etc., must be larger than life.”

Print this article

You'll need these tools and supplies

The farmer requires a $2\frac{1}{4} \times 2\frac{1}{4} \times 6\frac{1}{2}$ " block of basswood on which to transfer the pattern shown on page 83. Or, start with the prime northern basswood blank sawn from two directions, shown below. It has lines drawn on to get you going. Send \$9.95 (U.S.) ppd. (two for \$17.50) to: *Harley Refsal Woodcarving, 619 North St., Decorah, IA 52101.* Allow 4-6 weeks for delivery. For a booklet containing 20 patterns of Harley's favorite figures, add just \$9.95 and request "Patterns."

Pre-sawed blank

You'll need the carving tools illustrated below:

Knives

- bench-type carving knife

Gouges

- $\frac{1}{2}$ " No. 6 or 7 palm gouge
- $\frac{1}{4}$ "- $\frac{3}{8}$ " No. 4 or 5 gouge
- $\frac{1}{8}$ "- $\frac{3}{16}$ " No. 9 gouge
- $\frac{1}{8}$ " 45° V-tool

Finish Materials

- Water-soluble, acrylic artist's paints in white, red, blue, green, brown, and yellow (or any other colors you care to substitute)
- No. 7 or No. 8 brush
- No. 000 brush
- Boiled linseed oil
- Burnt-umber artist's oil color (or brown oil stain)

After assembling all the tools and supplies you'll need for this project (see list, left), study the front- and back-view photographs of the completed farmer. And, turn to the closeup photograph of the figure's face on page 33. In the full-figure photos, note the sharp, prominent cuts that produce creases and folds, elbows and knees. Study the facial close-up to see how each angular cut of the knife defines a feature—nose, cheeks, ear. Now, you're ready to start carving.

Carve from the bottom up

With your knife, shape the figure's legs, as in photo below. Be sure that you don't round the legs so they resemble perfect cylinders—the goal is to leave as many large, flat planes as possible. Take advantage of the cuts to make folds and creases. Imagine that if you sawed off one of the figure's legs midway between knee and ankle, and looked at the cross-section, the shape would be octagonal rather than round.

Bold knife strokes shape the leg. Remember, the cut you create stays there.

For the crotch of the farmer's pants, make two strongly defined cuts in an upside-down "V" shape. And, don't cut the crotch in too high. Locate it no more than $\frac{1}{2}$ " from the spot where his legs join the trunk of his body.

Now, turn the figure over and shape the seat of the farmer's overalls with your knife blade. In the photo below you can see the bold V-cuts required to form a crease—one cut down and in, the next up and in to meet it.

One cut down and in, another up and in make a fold in the cloth.

Now that you have carved his seat, turn your attention and your blade to the feet. Note how large the shoes appear in the photos. There's a double reason for this. First, you must leave them large to provide a solid base for the figure to stand on. Second, their size is part of the caricature.

Carve the shoes without attention to detail, avoiding the natural tendency to round them. Let a minimum number of flat cuts define their shapes. For the soles, for instance, you need only to trim the wood with flat, thin, vertical cuts around the edge of the shoe. Any attempt to accent the sole by making it a protrusion can result in a break-off of the cross grain (something to remember when you get to the cap visor, too). Let the farmer's pant legs fall all the

Continued

NORWEGIAN FARMER

way to the ground in back (see rear-view photo), but make cuts to represent folds where his pants break on top of his shoes (see front-view photo).

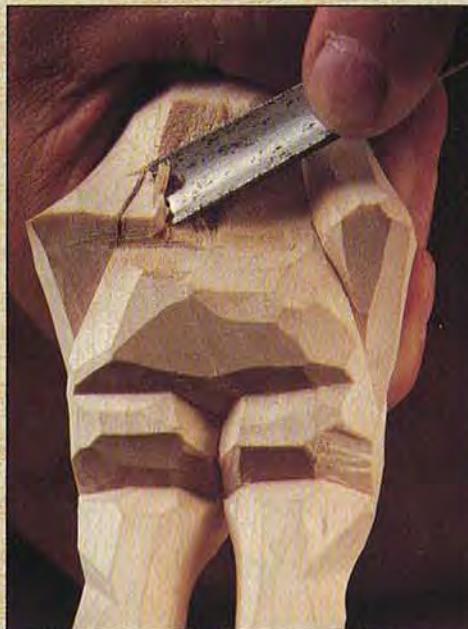

Put his hands in his pockets

Before carving the farmer's arms, plan your cuts so his hands will disappear into his overall pockets. And, as with the legs, avoid carving perfect cylinders. Instead, try to make large, flat cuts that meet sharply at the edge of the wood, as if his shirt had been starched and ironed. Separate the arms from the body at the chest with cuts to form a wide-legged "V" on the inside of the elbow (for detail, see photo on the next page, *top right*). These cuts also narrow and define the width of his chest.

The widest part of the figure is the area where the hands enter the pockets. And, the hands in those pockets tend to push out the overalls, so leave more wood at those points.

When you're satisfied with the look and shape of his arms, turn the farmer over to work on the back.

With a $\frac{1}{2}$ " No. 6 or No. 7 gouge, cut across the grain (horizontally) with scooping motions to remove wood between the arms. This creates the small of his back. (Here, the gouge makes it difficult to leave flat planes, but try to keep gouge marks to a minimum.) Leave each arm $\frac{1}{2}$ " wide at the outer elbow. Then, clean up the elbows with the same type of cuts you used on the inner elbows—sharp edges on the elbows are okay (see elbow, *left* and *top right*). After the elbows, you will have shaped your farmer from the neck down.

A gouge removes wood to form the small of the back.

Character for a caricature

Before starting to carve the head, draw on large ears and sideburns as shown on the pattern and the photo *above right*. Don't be afraid to exaggerate. Place the ear at least two-thirds of the way back on the side of the head. Then, with your knife, remove wood from in front of, on top of, and behind the ear so that it protrudes about $\frac{1}{4}$ " at the thickest point (just below and behind the top).

Next draw on the line for his seed cap. (Note that the cap goes all the way down to his collar behind the ears). Then, narrow the wood of the cap over the face so the visor ends up sticking out about $\frac{1}{32}$ " from the side of the farmer's head, as shown in the photo *far right*.

By now, you have probably trimmed off the sideburn outlines, so draw them in again. Note: While working on the ears and sideburns, constantly check both sides of the head to see that the ears are level with each other and the same approximate size. Then, recess the area below and in front of the ears about $\frac{1}{32}$ ", as in the photo of the finished face, *right*.

Pencil lines define the exaggerated ears and sideburns.

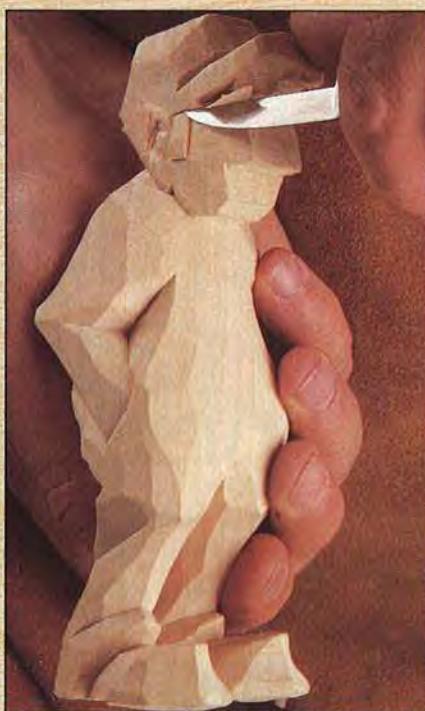

Taper the front part of the ears so that they disappear under the sideburns. To detail the inside of the ear, make a stabbing cut with the point of a $\frac{1}{8}$ "– $\frac{3}{16}$ " No. 9 gouge, as in photo *below*. Then, with the same tool, make a few shallow sweeps from the surrounding wood and into the cut.

Detail ears with a simple stab cut from a small gouge.

Next, shape the underside of the cap visor with a shallow $\frac{1}{4}$ "– $\frac{3}{8}$ " No. 4 or 5 gouge. Run the tool carefully from front to back and toward the forehead. With your knife, remove wood from the top side of the visor to follow the curvature you carved on the underside. *Use caution at this stage.* You're carving across grain, and if you make the visor thinner than $\frac{3}{16}$ ", or exert too much pressure with a tool, it can break off. Make a stop cut on the forehead under the visor to help shape the face.

Thinned acrylic paints allow the wood grain to show. Add a patina by slightly darkening linseed oil with stain.

Note the thick cap visor. If you carve it too thin, though, or use excess pressure, the cross-grained wood could break.

Now, you're ready to tackle the face—often thought of as the most difficult step in carving. So, proceed slowly and refer to the photo of the finished face, *below*.

Begin by drawing a vertical centerline down the front of the face. Then, remove wood with your knife at an outwardly slop-

ping angle toward the back of the head. (If you look at someone's face, it isn't flat, but tapers toward the tip of the nose.)

To form the smile lines on both sides of the nose, make V-cuts with your knife. Note that they begin at the bulb or fattest part of the nose, then run down and outward like the legs of the letter A.

With a shallow V-cut, make the mouth, noting that it's located on the face slightly closer to the nose than to the tip of the chin. Accent the lower lip by cutting a shallower and shorter V-cut below and parallel to the mouth.

Using the same V-cuts as above, shape the eye sockets, at the same time thinning and forming the nose. With your small No. 9 gouge, scoop out the final sockets. You'll paint in the eyes later.

Now, it's time to add a few details. For the overall suspenders, first draw on lines, then vein (lightly cut) them with your V-tool. Vein the eyebrows, sideburns, and shirt collar as well. To make the brass buttons on his overalls, use the same stab technique you did to detail the inner ear. And, before you put away your tools, take the V-tool and add your name and the date to the bottom of one of the carved figure's shoes.

Paint that shows the grain

Referring to the photos here and on page 31, paint your farmer. Remember to thin the paints with water so the grain will show through (except the colors you use for the eyes, which should be opaque). Experiment first.

After the paint on your carving has thoroughly dried, liberally apply boiled linseed oil to which you've added just a hint of brown oil-stain or burnt umber artist's oil color. This gives your figure a protective patina.

FOR LOADS OF FUN
THE FAT CAT®

FRONT-END LOADER

Our latest piece of heavy equipment may be pint-sized, but this tough-as-nails toy will be BIG with the sandbox set. Its pivoting-bucket assembly, in the skillful hands of an imagina-

tive child, will move "mountains" of material. For information on how to obtain plans for the other Fat-Cat toys we've published, please see the box on page 37.

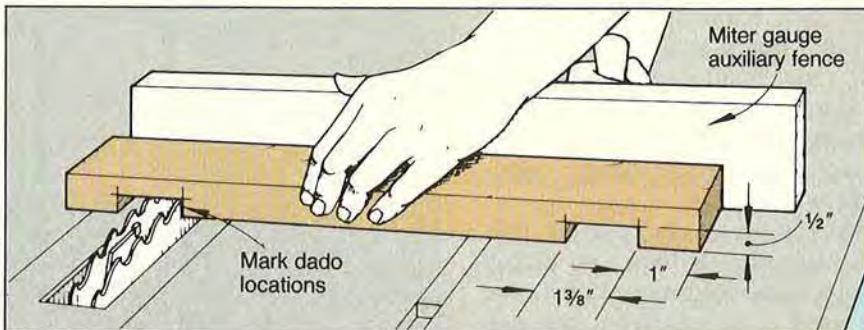

Note: You'll need thin stock for this project. You can either plane or resaw thicker stock to size.

First, the cab and chassis

1 Cut a piece of $\frac{3}{4}$ " pine to $2\frac{1}{8}$ " wide by 12" long for the cab (A). 2 Measuring 1" from each end of the pine, mark the locations for a pair of $1\frac{3}{8}$ "-wide dadoes. Using your tablesaw and a miter gauge, cut the dadoes $\frac{1}{2}$ " deep where shown in the drawing at right.

3 Crosscut the pine into two equal lengths. Mark the windshield location on one piece (see the Window detail below for reference). Mark the top of the windshield flush with the top of the dado.

Continued

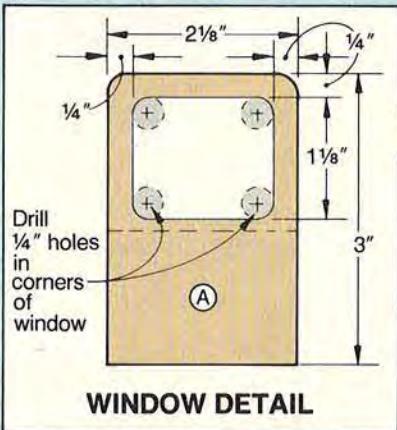

Bill of Materials

Parts	Finished Size*			Mat.	Qty.	Parts	Finished Size*			Mat.	Qty.
	T	W	L				T	W	L		
A* cab	1 1/2"	2 1/8"	3"	LP	1						
B chassis	3/4"	2 1/8"	4 1/4"	P	1	F bottom	1/4"	2"	3"	P	1
C hood	1 1/2"	1 1/2"	1 1/2"	LP	1	G back	1/4"	2 1/4"	3"	P	1
D support	1"	1 1/8"	1 5/8"	LP	1	H ends	1/4"	2 1/4"	2 1/4"	P	2
E* wheels	3/4"	2" dia.		P	4	I arms	1/2"	1"	2 5/8"	P	2

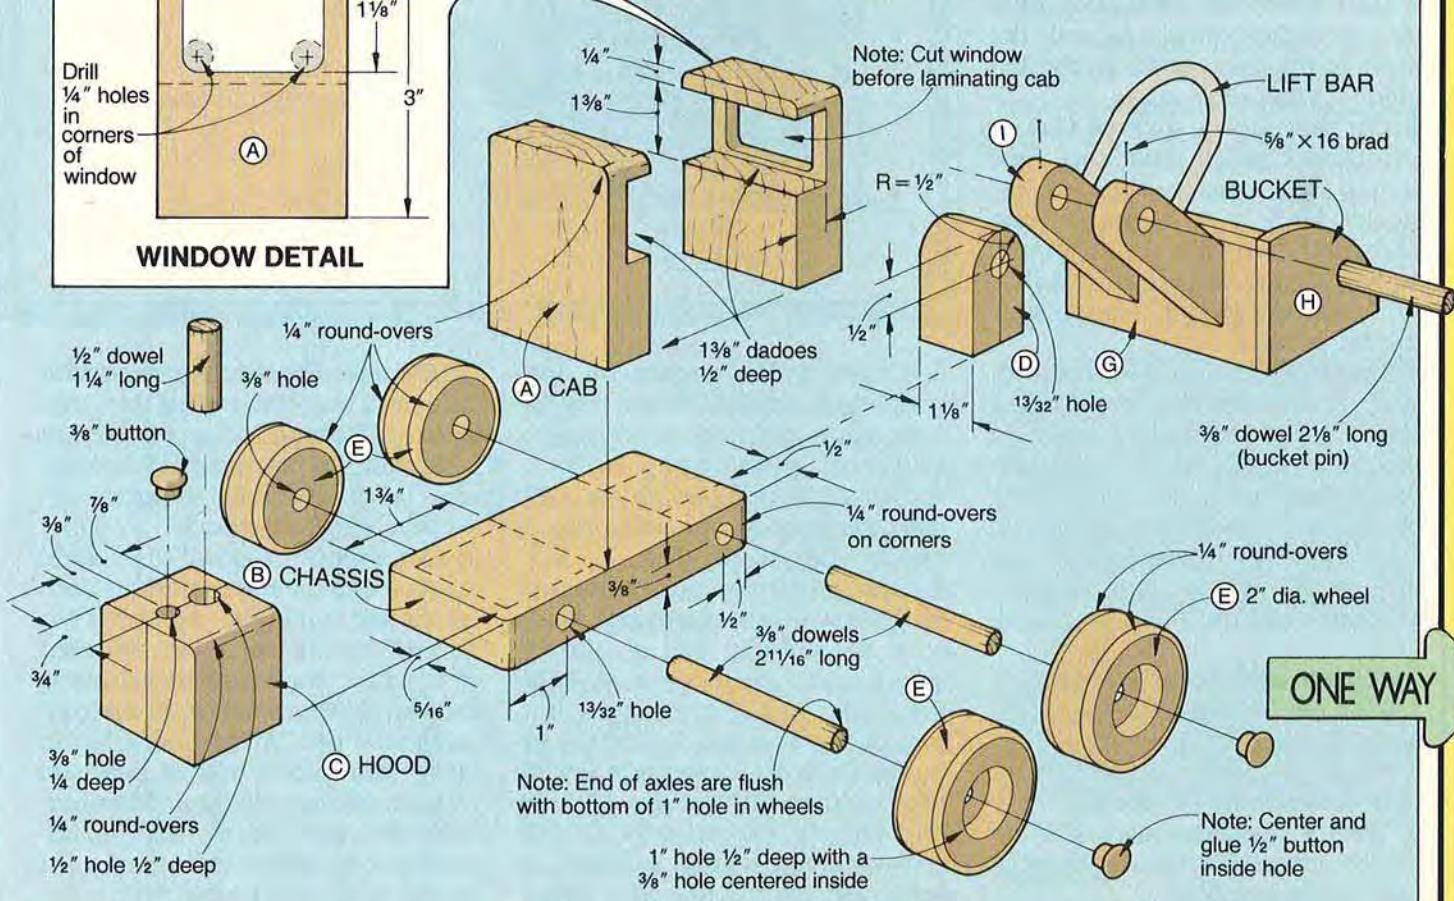

*Initially cut parts marked with an * oversized. Then, trim each to finished size according to the how-to instructions.

Supplies: $\frac{3}{8}$ " dowel stock, $\frac{1}{2}$ " dowel stock, $\frac{3}{8}$ " wood button, $\frac{1}{2}$ " wood buttons, $\frac{3}{8}$ " all-thread rod $5\frac{1}{2}$ " long with nuts and washers for sanding arbor, $\frac{1}{4} \times 1\frac{1}{2}$ " U-bolt, $\#4 \times \frac{1}{2}$ " flat-head wood screws, $\frac{5}{8} \times 16$ brads, clear finish.

Material Key: LP-laminated pine, P-pine

WINDOW DETAIL

FRONT-END LOADER

Now, drill four $\frac{1}{4}$ " holes at each corner on the inside of the marked windshield. Cut the opening to shape with a scrollsaw or coping saw. Sand or file the cut edges of the windshield.

4 Apply glue to the mating surfaces, align the dadoes, and clamp the cab parts. Remove excess glue (we used a chisel) from the cab interior before it dries.

5 Trim the top and bottom of the cab lamination to length where dimensioned on the Window detail on the previous page. Sand $\frac{1}{4}$ " round-overs along the cab top where shown on the drawing.

6 Cut the chassis (B) to size.

Add the hood and bucket support

1 Glue and clamp two pieces of $\frac{3}{4}$ "-thick pine for the hood (C). Sand $\frac{1}{4}$ " round-overs on the top edges where shown on the Exploded View drawing.

2 Mark the smokestack and radiator-cap centerpoints, and drill the holes to the sizes stated on the Exploded View drawing.

3 Cut the bucket support (D) to size from 1"-thick pine stock (we laminated two pieces of $\frac{1}{2}$ " stock). Mark a $\frac{1}{2}$ " radius on one end, and bandsaw it to shape. Mark the centerpoint, and drill a $1\frac{3}{32}$ " hole through the support for the bucket pin.

4 Sand the chassis, hood, and support. Spread glue on the mating surfaces, and clamp the support to the front of the chassis, positioning it flush with one end of the chassis and centered from side to side. Next, glue and clamp the cab to the chassis and support, and then add the hood.

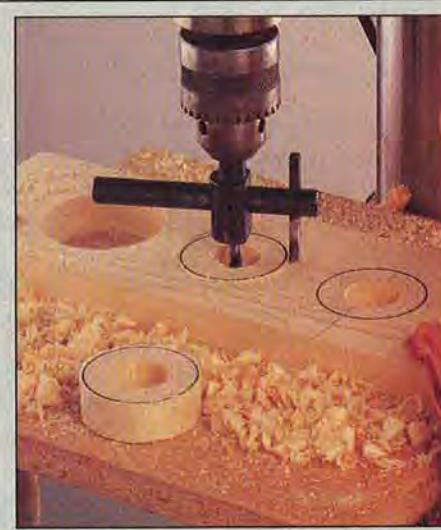

Time to add some wheels

1 To make four wheels (E), cut a piece of $\frac{3}{4}$ "-thick pine to 4×14 ". Starting 3" from one end, mark four centerpoints 3" apart.

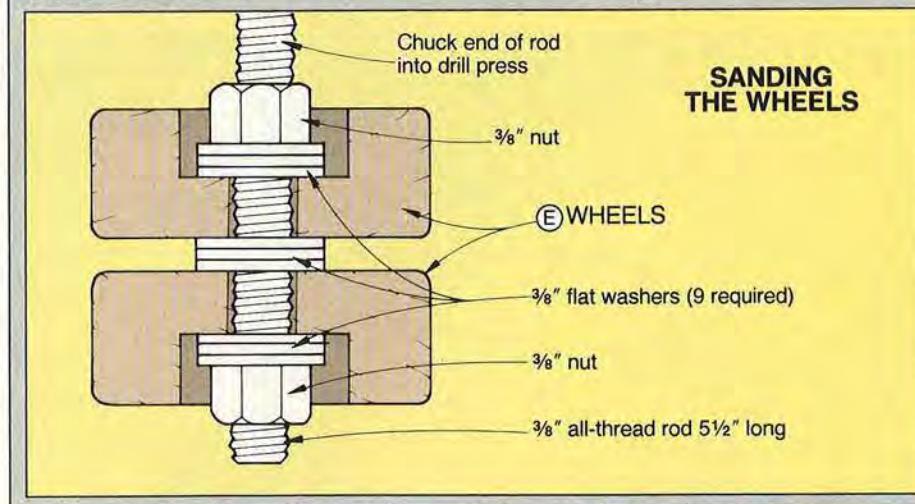

2 With a compass, mark a 2"-diameter circle (1" radius) at each marked centerpoint.

Mark the wheel centerpoint locations 3" apart on the pine, and drill holes $\frac{1}{2}$ " deep for each wheel.

Center the circle-cutter pilot bit over the Forstner-bit depression, and cut the wheels to shape.

SANDING THE WHEELS

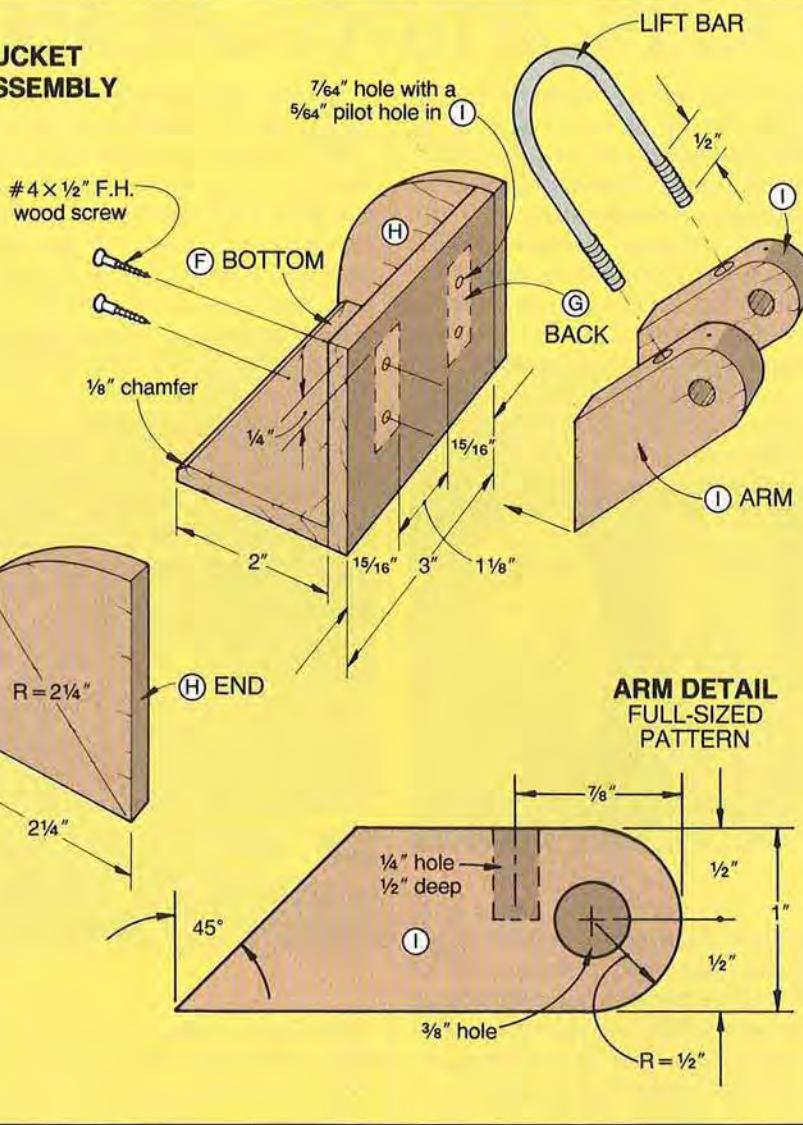

3 Chuck a 1" Forstner bit into your drill press. Center the bit over each marked centerpoint, and bore a $\frac{1}{2}$ "-deep hole as shown in the photo *above*. (We used the stop on our drill press to ensure uniform depth.)

4 Chuck a circle cutter into your drill press. Turn the cutter blade with the pointed end on the inside to cut a perfect wheel. Raise the blade $\frac{5}{8}$ " higher than the bottom of the pilot bit. Center the pilot bit over the depression left by the Forstner bit in each 1" hole, and slowly—about 250 to 500 rpm—cut the wheels to shape as shown in the photo *above right*.

5 Remove the circle cutter, and chuck a $\frac{3}{8}$ " twist drill bit into your drill press. Secure a wheel in a handscrew clamp, and enlarge the $\frac{1}{4}$ " pilot (axle) hole to $\frac{3}{8}$ ". Repeat for each wheel.

6 Cut a piece of $\frac{3}{8}$ " all-thread rod to $5\frac{1}{2}$ " long, and chuck it into your drill press. Attach two wheels at a time to the threaded rod where shown in the drawing *above*. With the drill press running at about 750 rpm, hand-sand a $\frac{1}{4}$ " round-over on each wheel where shown in the drawing. (We found sanding the round-overs safer than trying to rout them on a router table.)

BUCKET ASSEMBLY

Next, assemble the bucket

1 Cut the bucket bottom (F), back (G), and ends (H) to size and shape from $\frac{1}{4}$ " stock. Sand a $\frac{1}{8}$ " chamfer along the top front edge of the bucket bottom.

2 From $\frac{1}{2}$ " stock, cut the arms (I) to size, mitering the front ends at 45°. See the drawings *above* for reference and the Bill of Materials for sizes.

3 Mark the centerpoints, and drill a $\frac{1}{4}$ " hole $\frac{1}{2}$ " deep in each arm for the lift-bar U-bolt and a $\frac{3}{8}$ " hole through each bucket arm.

4 Sand the pieces. Then, with the edges and ends flush, glue and clamp the bucket parts (F, G, H).

5 Using a hacksaw, trim the ends of a $1\frac{1}{2}$ " U-bolt so only $\frac{1}{2}$ " of threaded portion remains on each end (see the Bucket Assembly drawing for specifics).

6 Set the arms on a flat surface, and epoxy the threaded ends of the U-bolt into the $\frac{1}{4}$ " holes in the arms, checking that the arms are parallel to each other and that the mitered front ends remain flush. (You want the bucket support to fit easily between the arms.)

7 Hold the arm assembly against the back of the bucket assembly, and trace the arms outlines onto the bucket back. Drill four $\frac{7}{64}$ " holes through the back and $\frac{5}{64}$ "

pilot holes into the arms. Screw the arms to the bucket back.

8 Cut a $\frac{3}{8}$ " dowel to $2\frac{1}{8}$ " long for the bucket pin. Position the arms on both sides of the bucket support, and slide the dowel pin in place. Snip off the head of a $\frac{5}{8} \times 16$ brad and chuck it into your portable drill. Drill a pilot hole through each arm and into the dowel pin. Drive a $\frac{5}{8} \times 16$ brad through each pilot hole to secure the arms to the bucket pin.

Mount the wheels, and move some gravel

1 Cut the axles to length from $\frac{3}{8}$ " dowel stock as dimensioned on the Exploded View drawing.

2 Glue one wheel onto each dowel axle so that the end of the dowel is flush with the inside of the counterbore. After the glue dries, slide the axle through the axle hole and glue another wheel to the end of the axle dowel, leaving enough free play so the wheels turn easily.

3 To add the hubcaps, set the loader on its side. Place a drop of glue on the ends of the axle dowels, and glue a $\frac{1}{2}$ " wood button to the end of the dowel. After the glue dries, flip over the assembly and repeat for the other hubcaps.

4 Add the radiator cap and smokestack. Mask the U-bolt and apply the finish. ♣

Fat-Cat-Toy Plans

We've presented plans for the following Fat-Cat toys: 1) semi-trucks and trailers, 2) excavator, 3) bulldozer, 4) dump truck and lowboy. To order the instructions, send \$2 per plan (four plans available) and a self-addressed envelope with one first-class stamp *per* plan to Fat Cat Toys, WOOD Magazine, P.O. Box 11454, Des Moines, IA 50336-1454.

10 TIPS FOR IMPROVING

Next time you attend a woodworking show, check out the scrollsaw booths. You'll meet demonstrators who can scroll rings around most woodworkers. What do they know that you may not? Just a few tricks, such as the tips on these pages.

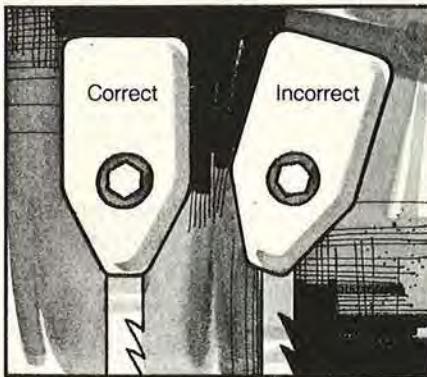

1 Because of the rapid up-down strokes of its arms, a scrollsaw vibrates excessively when not securely fastened to a stand. If your machine doesn't have such a perch, bolt the scrollsaw to a sturdy surface. If you need to store your scrollsaw between uses, clamp it down.

If you can't clamp or bolt down the machine, try placing a thin foam pad, such as a carpet pad, underneath the machine as shown *below*.

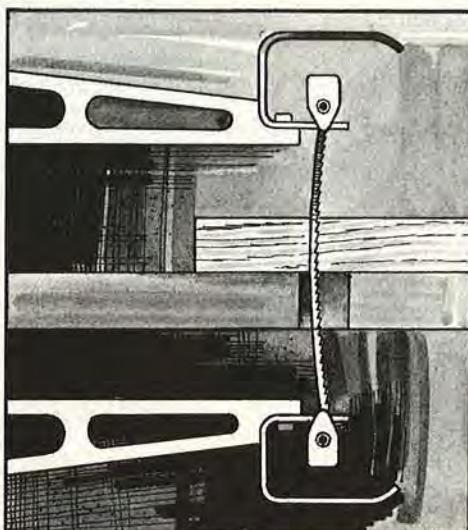

2 Scrollsaws come with a variety of blade clamps, but whatever the style, make sure the blade sits straight in the clamps as shown *below*.

With that accomplished, set the blade for the correct tension. Remember that you can tension a wide blade more than a narrow blade and that overtightening will lead to excessive blade breakage. On the other hand, a loose blade will flex sideways and backwards.

3 Time flies when you're having fun with a scrollsaw, so adjust the machine's table to a comfortable working height (near elbow level for most people). You'll also find it helpful to sit on a chair or stool.

4 As shown *below*, scrollsaw blades will flex under even slight feed pressure, so you need to occasionally slow down the feed rate and allow the blade to straighten itself. If you don't, you may cut a kerf that's not perpendicular to the table or bowed slightly. While cutting thick or dense stock, you may need to pause every $\frac{1}{2}$ " or so.

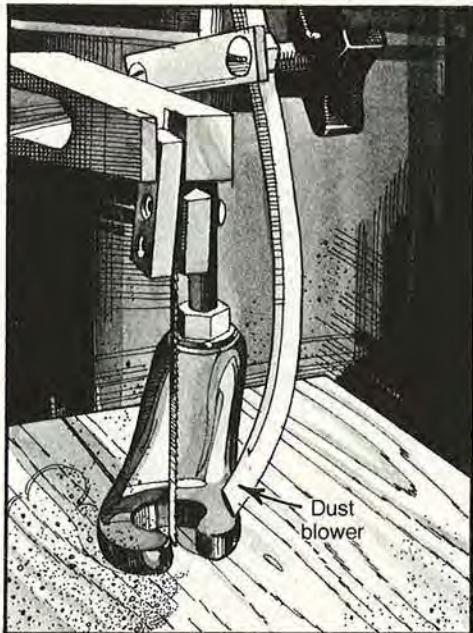

5 We've found that paper patterns are easier to see than patterns transferred directly to the wood surface by carbon paper or other means. Adhere the paper to the workpiece with adhesive spray or double-faced tape.

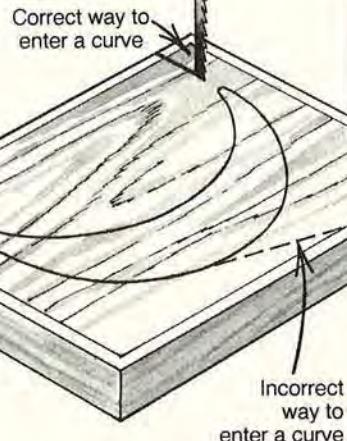

YOUR SCROLLWORK

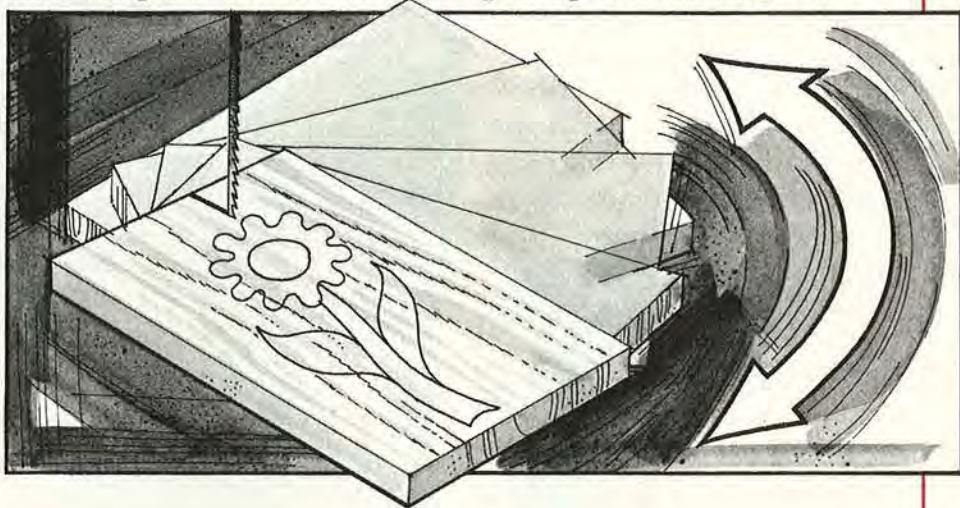

6 A dustblower helps you see exactly where you're cutting, but for it to be effective, you must reposition it for each stock thickness. Most blowers put out a small volume of air, so place the hose tip no more than $\frac{1}{2}$ " from the cutting action.

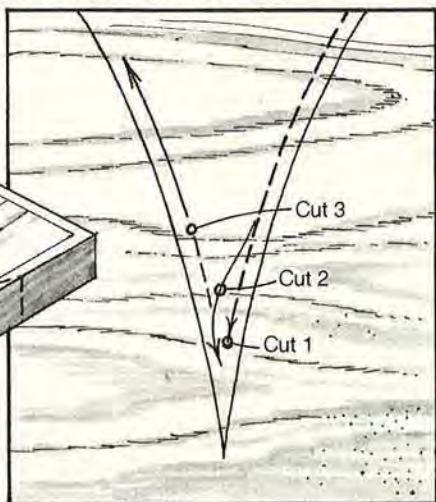

7 As you move the workpiece into the blade, start and exit the cut at a sharp point on the pattern rather than along a smooth line as shown *below*. Otherwise, your lines will have small "humps" where you enter and exit the cut.

8 Because many of us have become accustomed to following layout lines on a bandsaw—a machine that doesn't allow cutting extremely tight curves—we're not used to rotating a workpiece as shown *below*. Experienced scrollers often spin their workpieces in full circles to

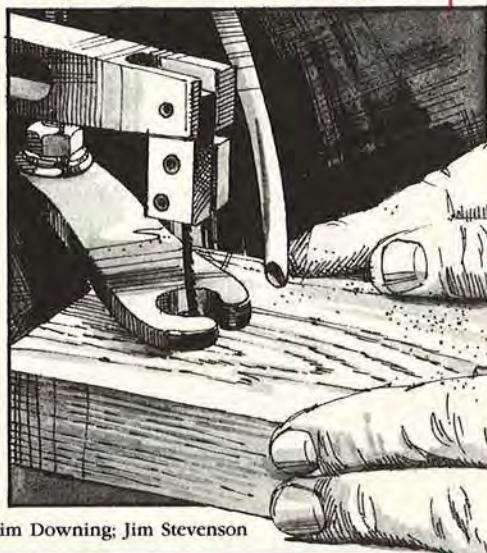

9 Sometimes, you can't spin your way through extremely tight spots such as the narrow corner shown *below*. To smoothly execute this maneuver, first cut all the way into the corner, then back up the blade for Cut 2. Now you have enough room to turn the blade around and make the exit cut.

precisely follow tight twists and turns. When carefully executed, this maneuver may look tricky, but it just requires some practice.

To train yourself, draw some squiggly lines on a scrap piece and see how closely you can follow your markings. Soon you'll be spinning with the best of 'em.

10 We hear from a lot of readers who have problems cutting thick, hard stock with a scrollsaw. If that sounds like you, try a wider, skip-tooth blade. (For more about blades, see the April 1990 issue.) Go slow and clear away cutting debris by backing the blade out of the cut often.

TOP-
OF-THE-
LINE

HARDWOOD

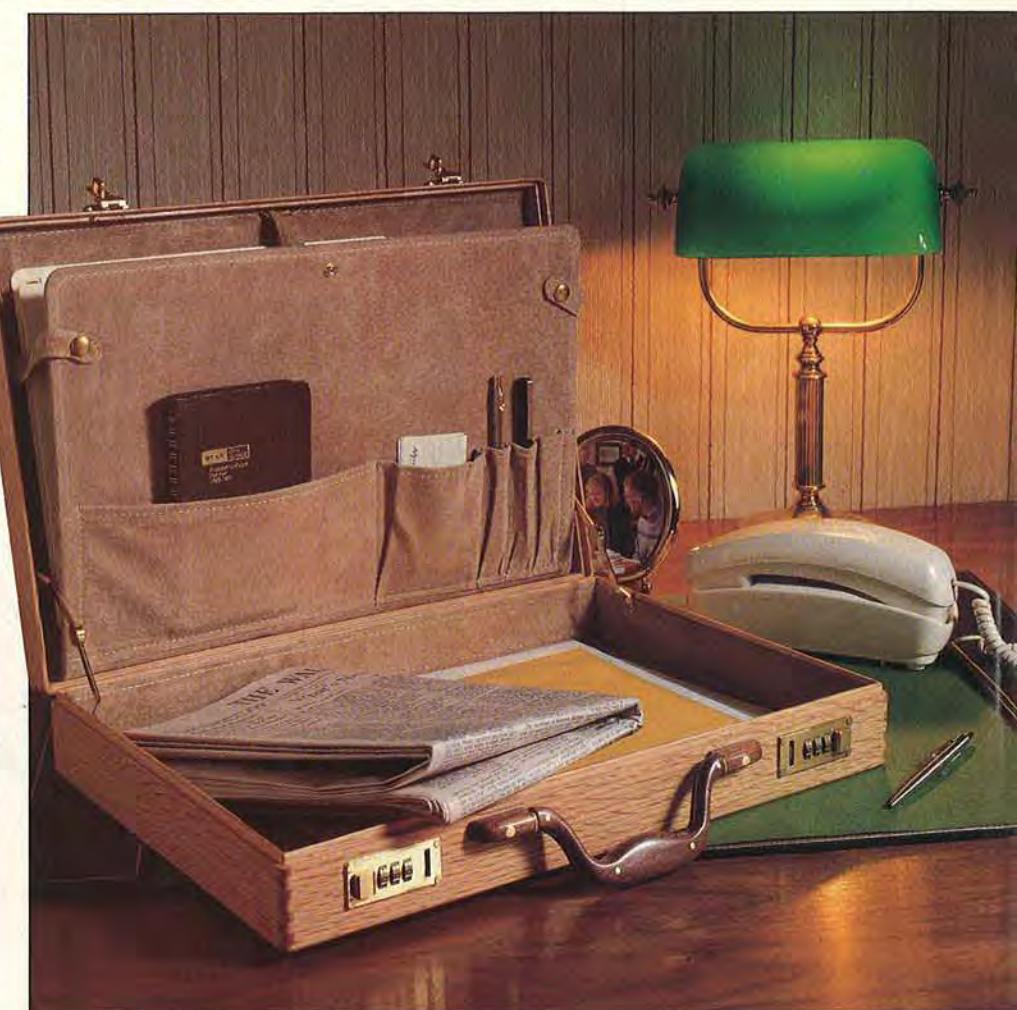

Off and on for about five years, we've fiddled with various briefcase designs. But until now, we just weren't satisfied with the results. Designing a sturdy handle proved to be the biggest hurdle: leather wouldn't do, plywood was out of the question, and solid stock split too easily. We hope you'll like how we licked that problem, and put together an affordable Buying Guide for the top-notch brass hardware and leather liner. Now, it's time to get down to business!

Note: You'll need some $\frac{1}{4}$ "-thick oak for the case frame. You can resaw or plane thicker stock to size, or see the Buying Guide at the end of the article for our source of solid stock and plywood. If you resaw or plane your own stock, let the milled wood acclimate a couple of days before proceeding. The stock you build with must remain flat.

Print this article

Start with the case frame

1 From $\frac{1}{4}$ " stock (we used quarter-sawn red oak), cut the briefcase sides (A) and front and back (B) to the sizes listed in the Bill of Materials.

2 Fit your tablesaw with a zero-clearance insert (our Delta requires a $\frac{1}{2}$ "-thick insert; we used plywood). Attach a $\frac{1}{4}$ " dado blade to your tablesaw. Raise the blade through the insert $\frac{1}{4}$ " above the surface of the saw table.

3 Construct the jig and stop block shown on the Box Joint Jig drawing on page 42. Carefully locate and cut the two $\frac{1}{4}$ " kerfs in the jig. For snug-fitting box joints, the distance between the guide pin and kerf must be exactly $\frac{1}{4}$ ".

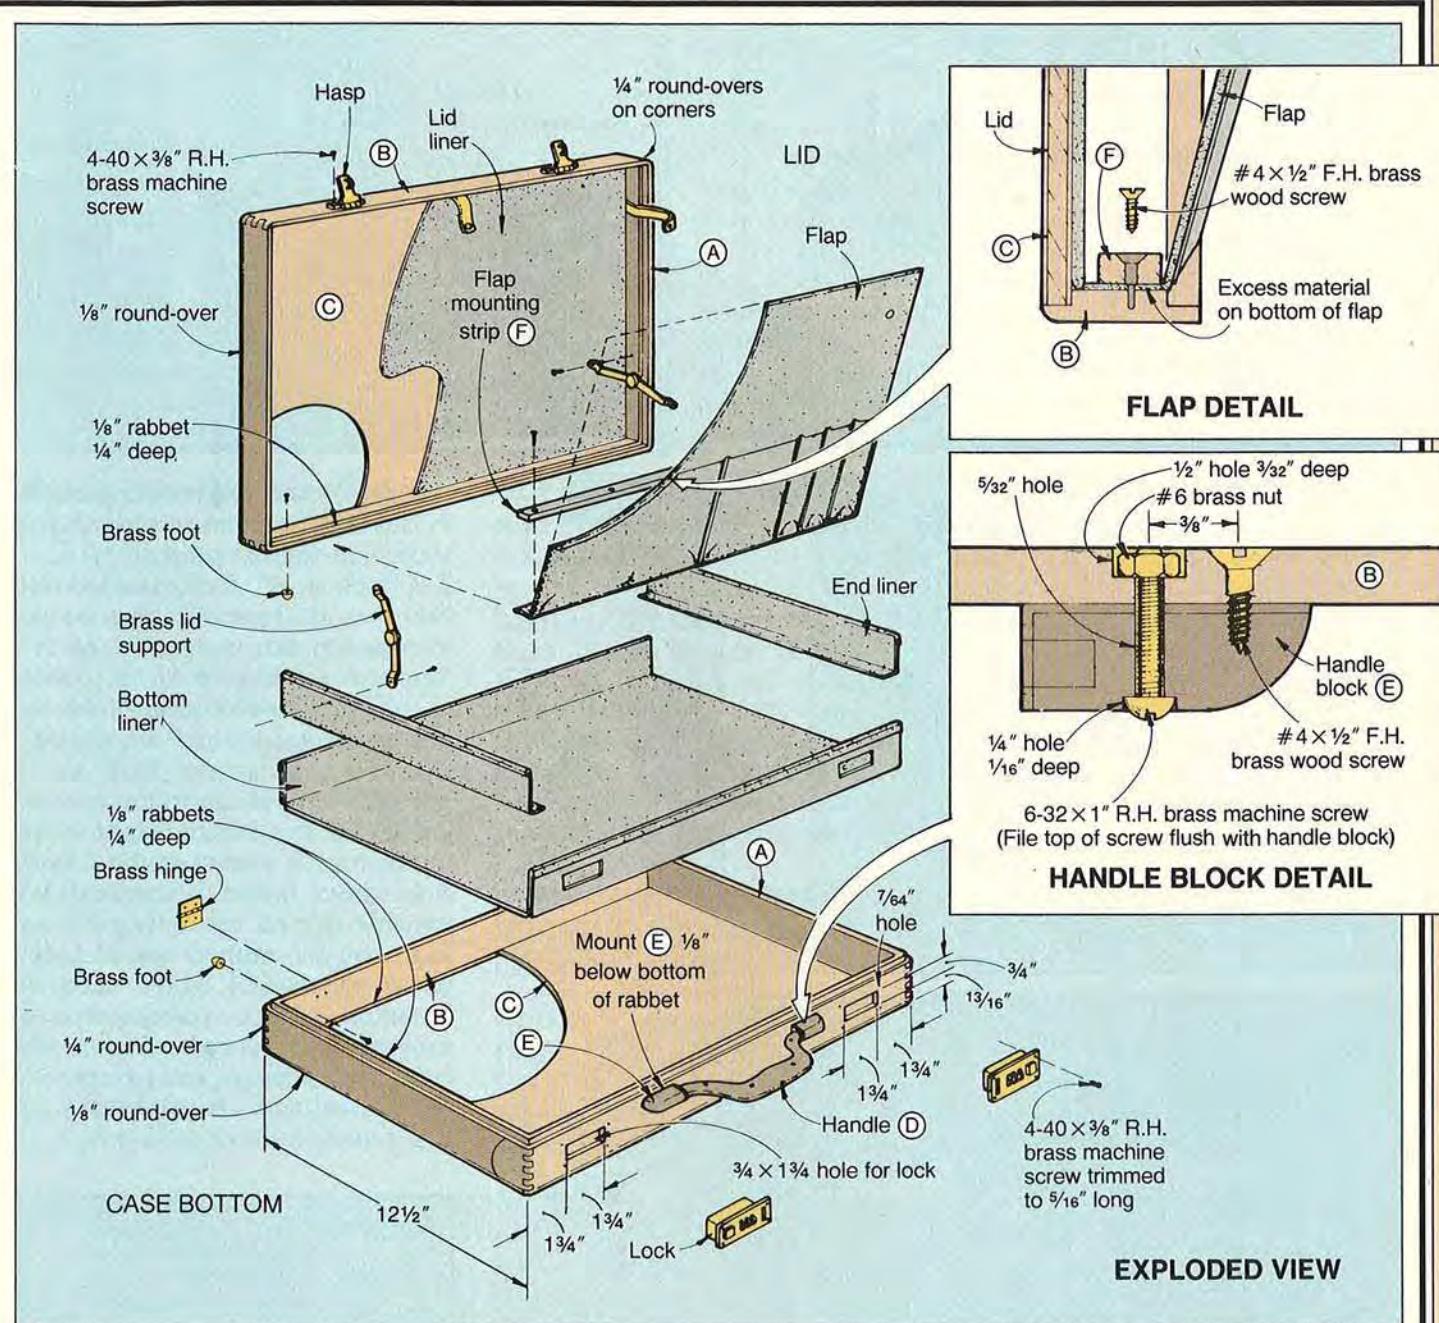

Note: To check the accuracy of your jig, test-cut box joints in scrap stock the same thickness and width as parts A and B; adjust if necessary.

4 Machine the frame sides and then the front and back as shown in the two-step drawings titled Box-Jointing the Side and Box-Jointing the Front and Back.

5 Cover the mating surfaces of the box joints with glue (we used woodworker's glue and a small brush). Glue and clamp the pieces (A, B) and check for square. Caution: overclamping can cause the pieces to bow. Immediately wipe off excess glue with a damp cloth.

HARDWOOD BRIEFCASE

BOX-JOINT JIG

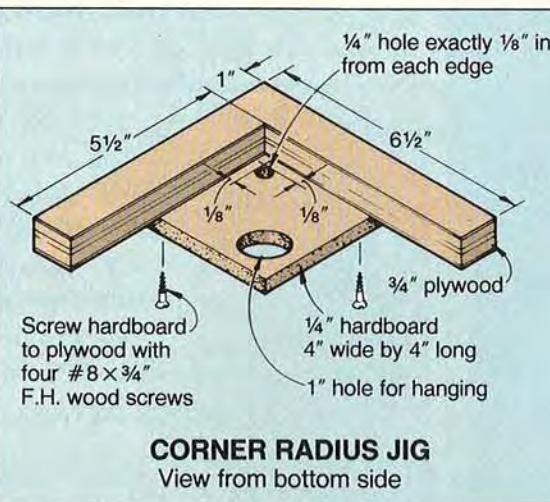

BOX-JOINTING THE SIDES

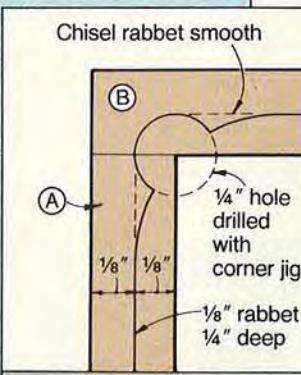

STEP 1.
Cut $1\frac{1}{4} \times \frac{1}{4}$ notch in corner.

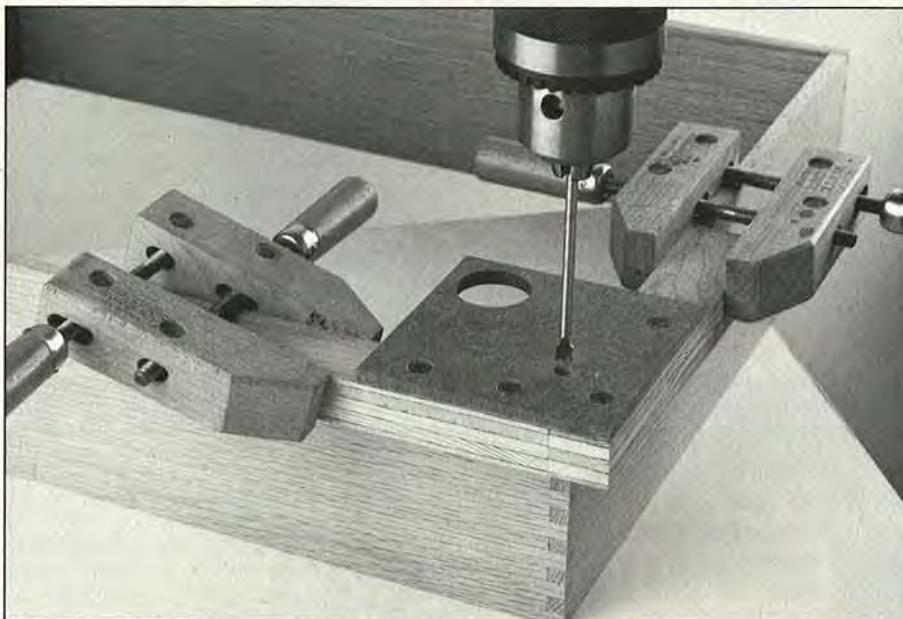

STEP 2.
Slide corner of notch firmly against guide pin and cut second notch in both boards.

CORNER RADIUS JIG
View from bottom side

FRAME CORNER

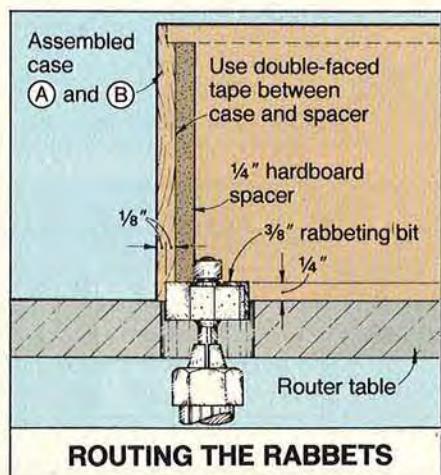

Clamp the radius jig to the corners of the case frame, and use a $\frac{1}{4}$ " flat-bottomed bit to form the round inside corners for the rabbets.

Now, fit the plywood panels

1 Build the corner-radius jig shown in the drawing at left.

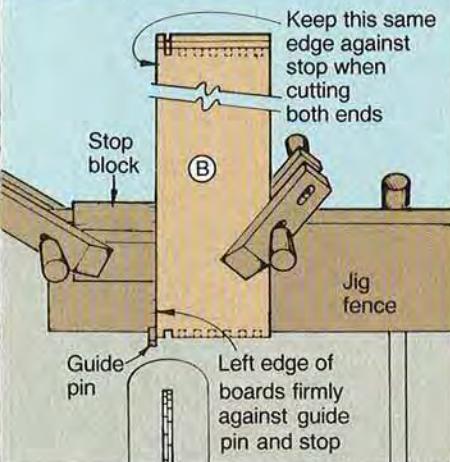

2 Chuck a $\frac{1}{4}$ " flat-bottomed bit into your drill press. Clamp the jig in position on one corner of the frame where shown in the photo at left. The inside corner of the jig must be snug against the outside corner of the frame. Drill a $\frac{1}{4}$ " hole $\frac{1}{4}$ " deep in the frame corner. Repeat the procedure (eight times total) at each corner of the frame.

3 In order to use a standard $\frac{3}{8}$ " carbide-tipped rabbeting bit to form the $\frac{1}{8}$ " rabbets for the plywood panels (C), you'll need to insert $\frac{1}{4}$ -inch-thick spacers where shown on the drawing below. To form these spacers, cut two pieces of $\frac{1}{4}$ " hardboard to $3\frac{3}{4} \times 12$ " and two pieces to $3\frac{3}{4} \times 17$ ".

ROUTING THE RABBETS

BOX-JOINTING THE FRONT AND BACK

STEP 1.
Cut first notch.

STEP 2.
Place notch over guide pin and cut second notch.

ing. Now, glue the panels into the openings.

7 Fit your router table with a $\frac{1}{4}$ " round-over bit and fence, and rout the four corners (not edges) of the case (see the Exploded View drawing for reference).

8 Rout a $\frac{1}{8}$ " round-over along the case edges.

ing the corner radius jig and the drawing titled Routing the Rabbets for reference, drill the corners, and rout a $\frac{1}{8}$ " rabbet $\frac{1}{4}$ " deep along the bottom *inside* edge of the lid. File or sand the four corners of the lip in the case bottom to fit into the radiused corners of the lid.

5 Mark the lock-hole locations on the case bottom (see the Exploded View drawing). Drill blade-start holes and cut the lock holes to shape. (We used a portable jigsaw—some call it a sabersaw—and a smooth-cutting blade.)

4 Secure the spacers against the inside surfaces of the case pieces with double-faced tape. Fit your router with a $\frac{3}{8}$ " carbide-tipped rabbeting bit, and raise it $\frac{1}{4}$ " above the router table. Then, rout a $\frac{1}{8}$ " rabbet around the top and bottom inside edges of the case assembly where shown below left. Remove the spacers and set them aside; you'll use them to rout the rabbet on the inside of the lid.

5 Chisel the waste between the rabbets and $\frac{1}{4}$ " holes in each corner where shown on the drawing titled Frame Corner at left.

6 From $\frac{1}{4}$ " oak plywood, cut the two panels (C) to fit the rabbeted openings in the oak case. Using a circle template, mark a $\frac{1}{8}$ " radius on each panel corner. Sand to the line until each panel fits the open-

Cut the case apart and form a lip

1 Make four cuts where shown in Step 1 of the three-step drawing below. (After making each cut, we taped two $\frac{1}{8}$ " spacers in each kerf to keep the case from binding when making the final cut.)

2 Reposition the fence where shown in Step 2 of the drawing below, and trim the top edge of the case bottom even with the outside finger.

3 To create the lip on the case bottom, fit your tablesaw with a $\frac{3}{8}$ " dado blade and an auxiliary wooden fence, and cut the $\frac{1}{4}$ " rabbets $\frac{1}{8}$ " deep where shown in Step 3 of the drawing below.

4 Rip the hardboard spacers you used earlier to 1" wide and tape them in place in the lid. Now, us-

One classy custom handle coming up

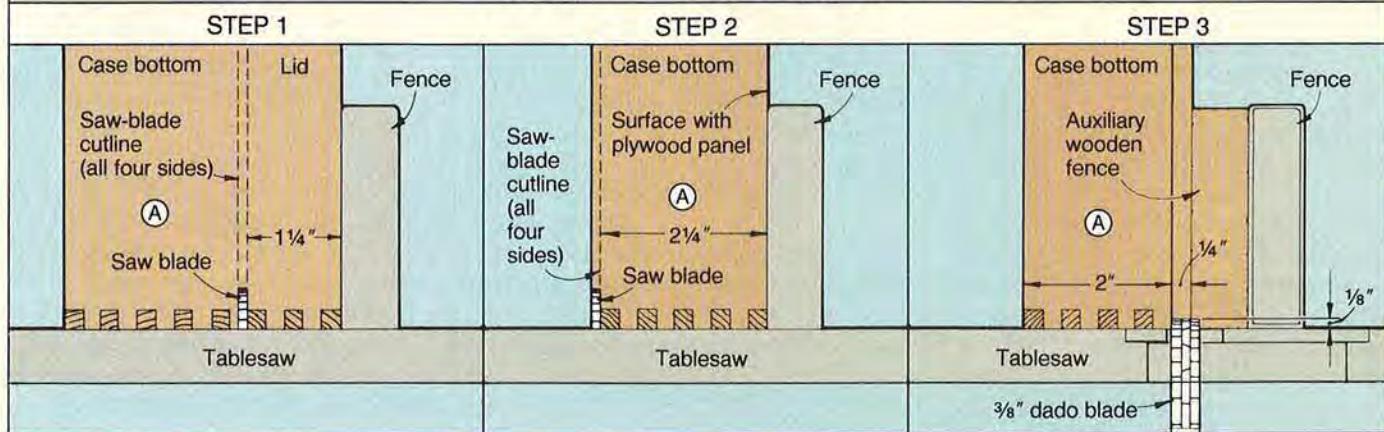

Note: Our prototype wood handles eventually split along the grain. Epoxying brass between solid stock solved that problem. When drilling and sanding the handle, use slow speeds to prevent overheating. Excessive heat will soften the epoxy, causing the brass to delaminate from the walnut.

1 Cut two pieces of $\frac{3}{8}$ " walnut and one piece of .032" brass to $2\frac{3}{8} \times 6\frac{1}{8}$ " (we used a bandsaw to cut the brass). For better adhesion to the epoxy and walnut, rough up both sides of the brass with 80-grit sandpaper.

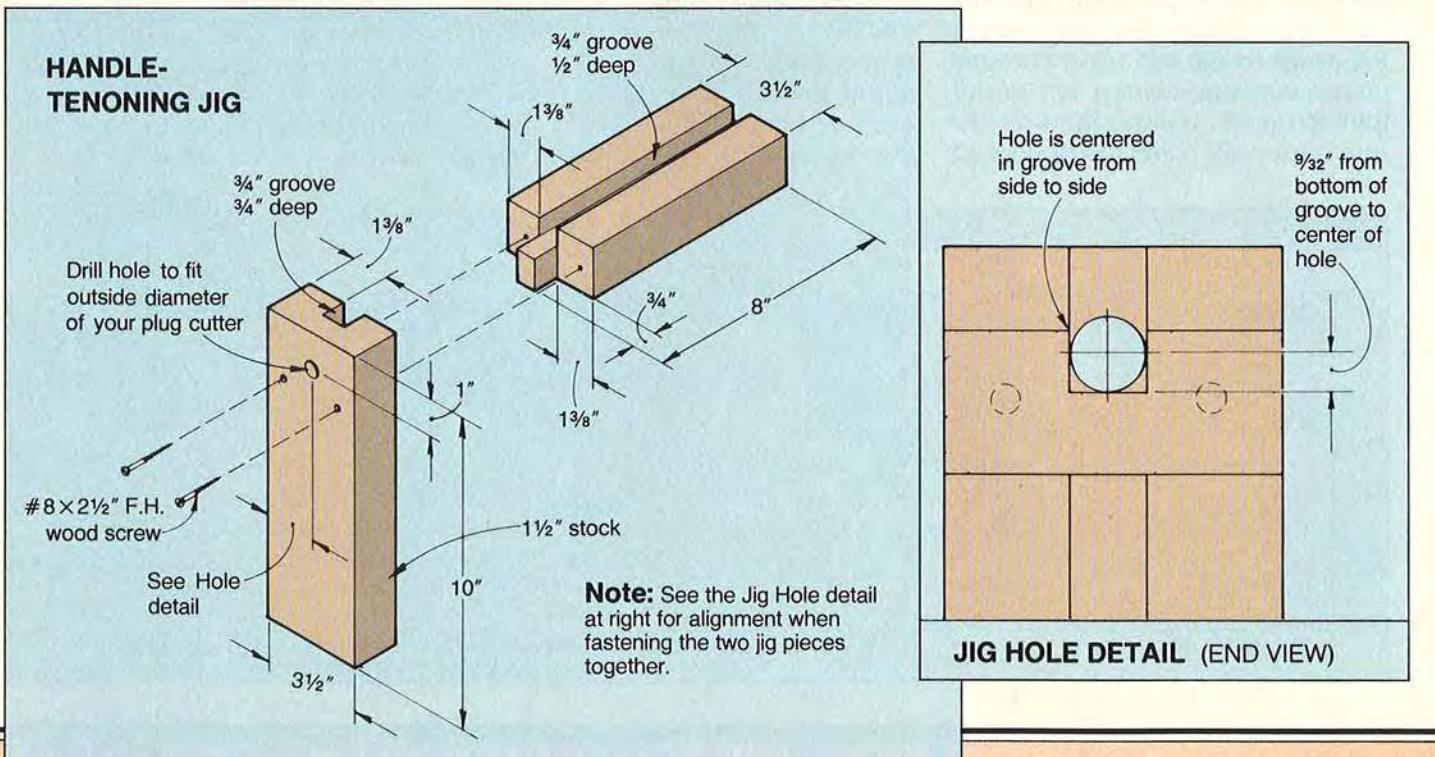

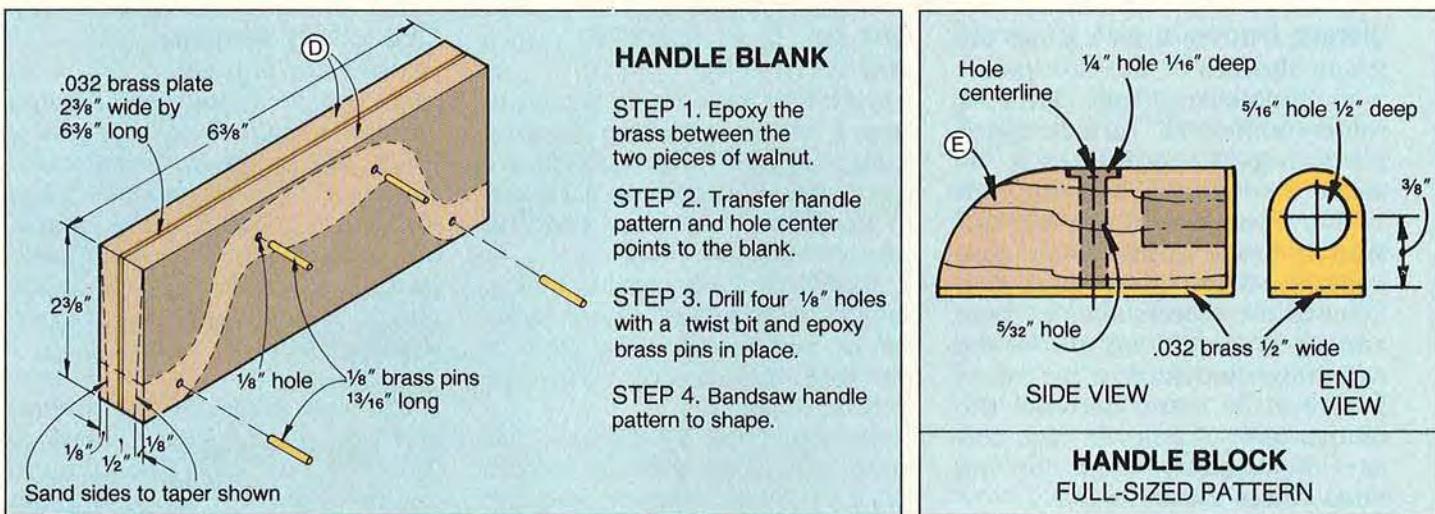

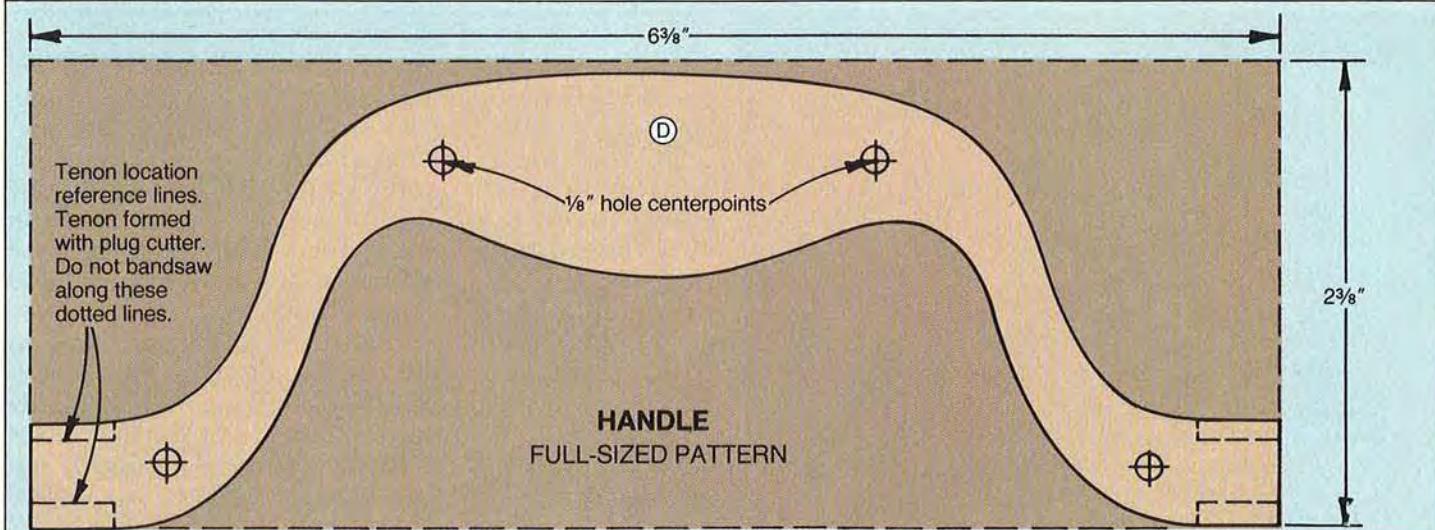

2 Follow the 4-step drawing on the following page to form the brass-and-walnut handle.

Continued

CUTTING THE CASE IN TWO

HARDWOOD BRIEFCASE

3 Build the handle-tenoning jig shown on the drawing *far left, bottom*. (We constructed ours from an 18"-long piece of 2×4.)

4 Sand both walnut surfaces until the handle fits snugly into the $\frac{3}{4}$ " groove in the handle-tenoning jig.

5 Fit your portable drill with a $\frac{5}{16}$ " plug cutter. Slide the handle into the jig and clamp it in place. Now, use the plug cutter to cut a $\frac{5}{16}$ " tenon $\frac{1}{16}$ " long on both ends of the handle as shown in the photo at *right*.

6 Sand the handle to the tapered shape shown on the Handle Blank drawing. Then, rout or sand $\frac{3}{16}$ " round-overs on all edges of the handle except at the tenons.

7 Cut two pieces of walnut to $\frac{1}{2} \times \frac{5}{8} \times 1\frac{1}{2}$ " for the handle blocks (E). Then, cut two pieces of .032" brass to $\frac{1}{2}$ " wide by 4" long. Form a 90° bend in the middle of the brass. Sand both surfaces of the brass for better adhesion, and then epoxy a handle block (E) to each brass piece.

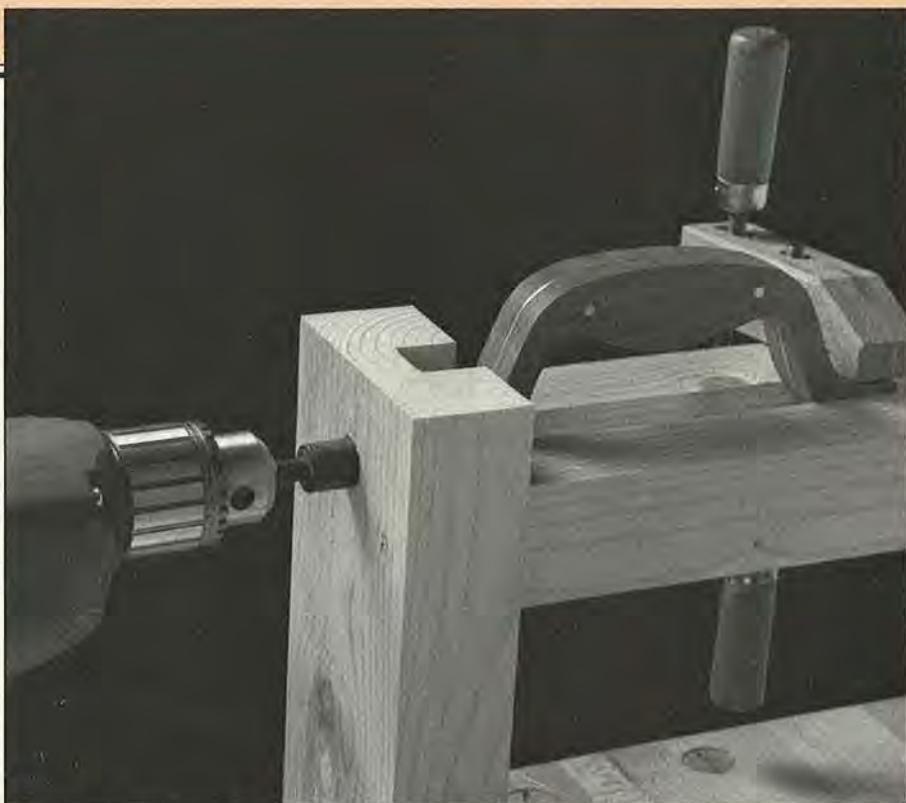

8 After the epoxy has cured, hold the block/brass assembly in a handscrew clamp, and drill a $\frac{5}{16}$ " hole $\frac{1}{2}$ " deep through the brass and into the walnut where shown at *left*.

9 Trim the brass flush with the ends of the walnut. File and sand a $\frac{1}{4}$ " round-over on each handle block. See the Handle Block drawing at *left* for reference. Now, drill the $\frac{5}{32}$ " and $\frac{1}{4}$ " holes in each block where shown.

It's time to attach the handle

1 Position the handle blocks on the handle tenons. Sand the handle tenons slightly if necessary for a good fit into the block holes. Center the assembly from side to side on the case and $\frac{1}{8}$ " below the routed rabbet where shown on the Exploded View drawing. Tape the assembly in position.

2 Using the previously drilled $\frac{5}{32}$ " holes in the blocks as guides, drill the same-sized holes through the

Use a $\frac{5}{16}$ " plug cutter and the tenoning jig to form the round tenons on the ends of the laminated brass-and-walnut handle.

case. Counterbore the hole on the inside of the case with a $\frac{1}{2}$ " Forstner bit.

3 Referring to the Handle Block drawing for reference, epoxy the machine screw and nut to secure the blocks and handle to the case. Then, mark the centerpoints and drill $\frac{5}{64}$ " holes through the case and $\frac{1}{4}$ " into each block. Countersink the holes. Epoxy and drive a $\frac{4}{4} \times \frac{1}{2}$ " brass flathead wood screw into each to further secure the blocks to the case.

4 Remove the machine-screw slot by filing and sanding.

Apply the finish, and install the hinges and locks

1 Finish-sand the case and apply the finish to the interior and exterior. (We left the wood natural and applied three coats of polyurethane.)

2 Chuck the threaded end of one of the hinge screws into a portable drill. Turn on the drill and hold the rotating head against a belt sander to sand the slotted head flat. Then, polish the head with 320-grit wet/dry sandpaper.

Remove the screw from the drill chuck and repeat with the seven remaining screws.

3 Spray the polished screw heads with clear lacquer. Let dry.

4 Referring to the drawing titled Mounting the Hinge for reference, tape the hinges in position and drill $\frac{3}{32}$ " pilot holes into the case.

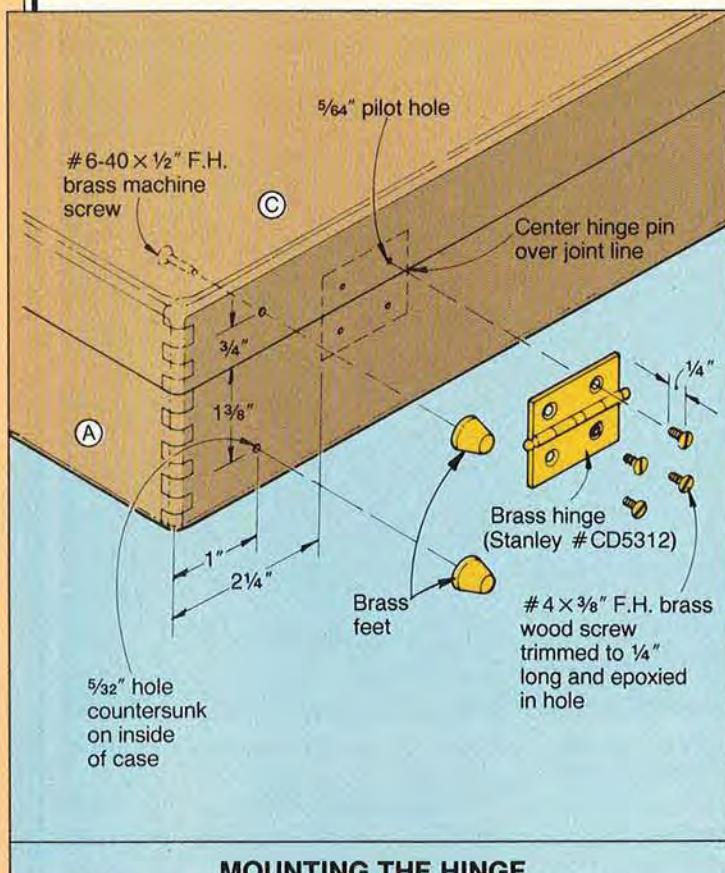

5 With a toothpick, fill the hinge-mounting holes with epoxy. Then, use the toothpick to apply epoxy to the threads of each screw. Thread the screws through the holes and into the mounting holes. Let the epoxy cure.

6 Tape a lock in position in one of the rectangular holes previously cut in the case. Using the lock holes as a guide, drill $\frac{5}{64}$ " holes through the case. Refer to steps 2, 3, and 5 above to fasten the locks to the case.

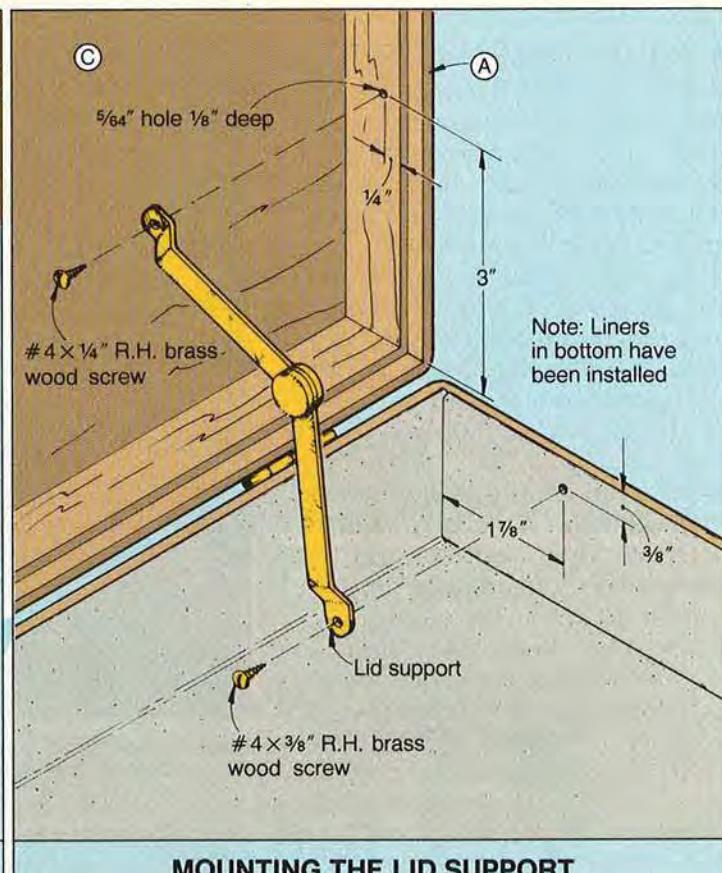

7 Push the hasps into the locks. Using the holes in the hasps as guides, mark the hasp-hole locations on the case. Drill a $\frac{7}{64}$ " hole at each mark. Refer to the method previously described to remove the screw slots and then epoxy the hasps to the case.

HARDWOOD BRIEFCASE

MOUNTING THE HINGE

MOUNTING THE LID SUPPORT

Add the feet and liner and head for the office

1 Using the drawing titled Mounting the Hinge, drill the mounting holes and fasten the feet to the case. (To secure the feet, we placed a drop of epoxy into each foot before threading the mounting screw in place.)

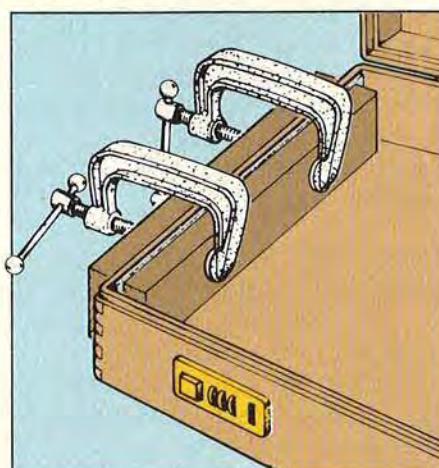

2 Cut the flap-mounting strip (F) to size. Drill and countersink four $\frac{7}{64}$ " holes through the strip.

3 To get the liner to stick to the case, lightly rough up the mating interior surfaces with 80-grit sandpaper. Sand all but the side edges of the lid—they don't get covered with the leather lining.

4 With woodworker's glue or epoxy, glue the end-liner pieces first. (As shown below, we used two pieces of stock to hold the end-liner pieces firmly against the case until the glue dried.) Be careful not to get any adhesive on the good face of the liner pieces. Now, install the bottom liner, us-

ing a stack of books or other heavy objects to hold the liner flat until the glue dries.

5 Attach the lid supports where shown above.

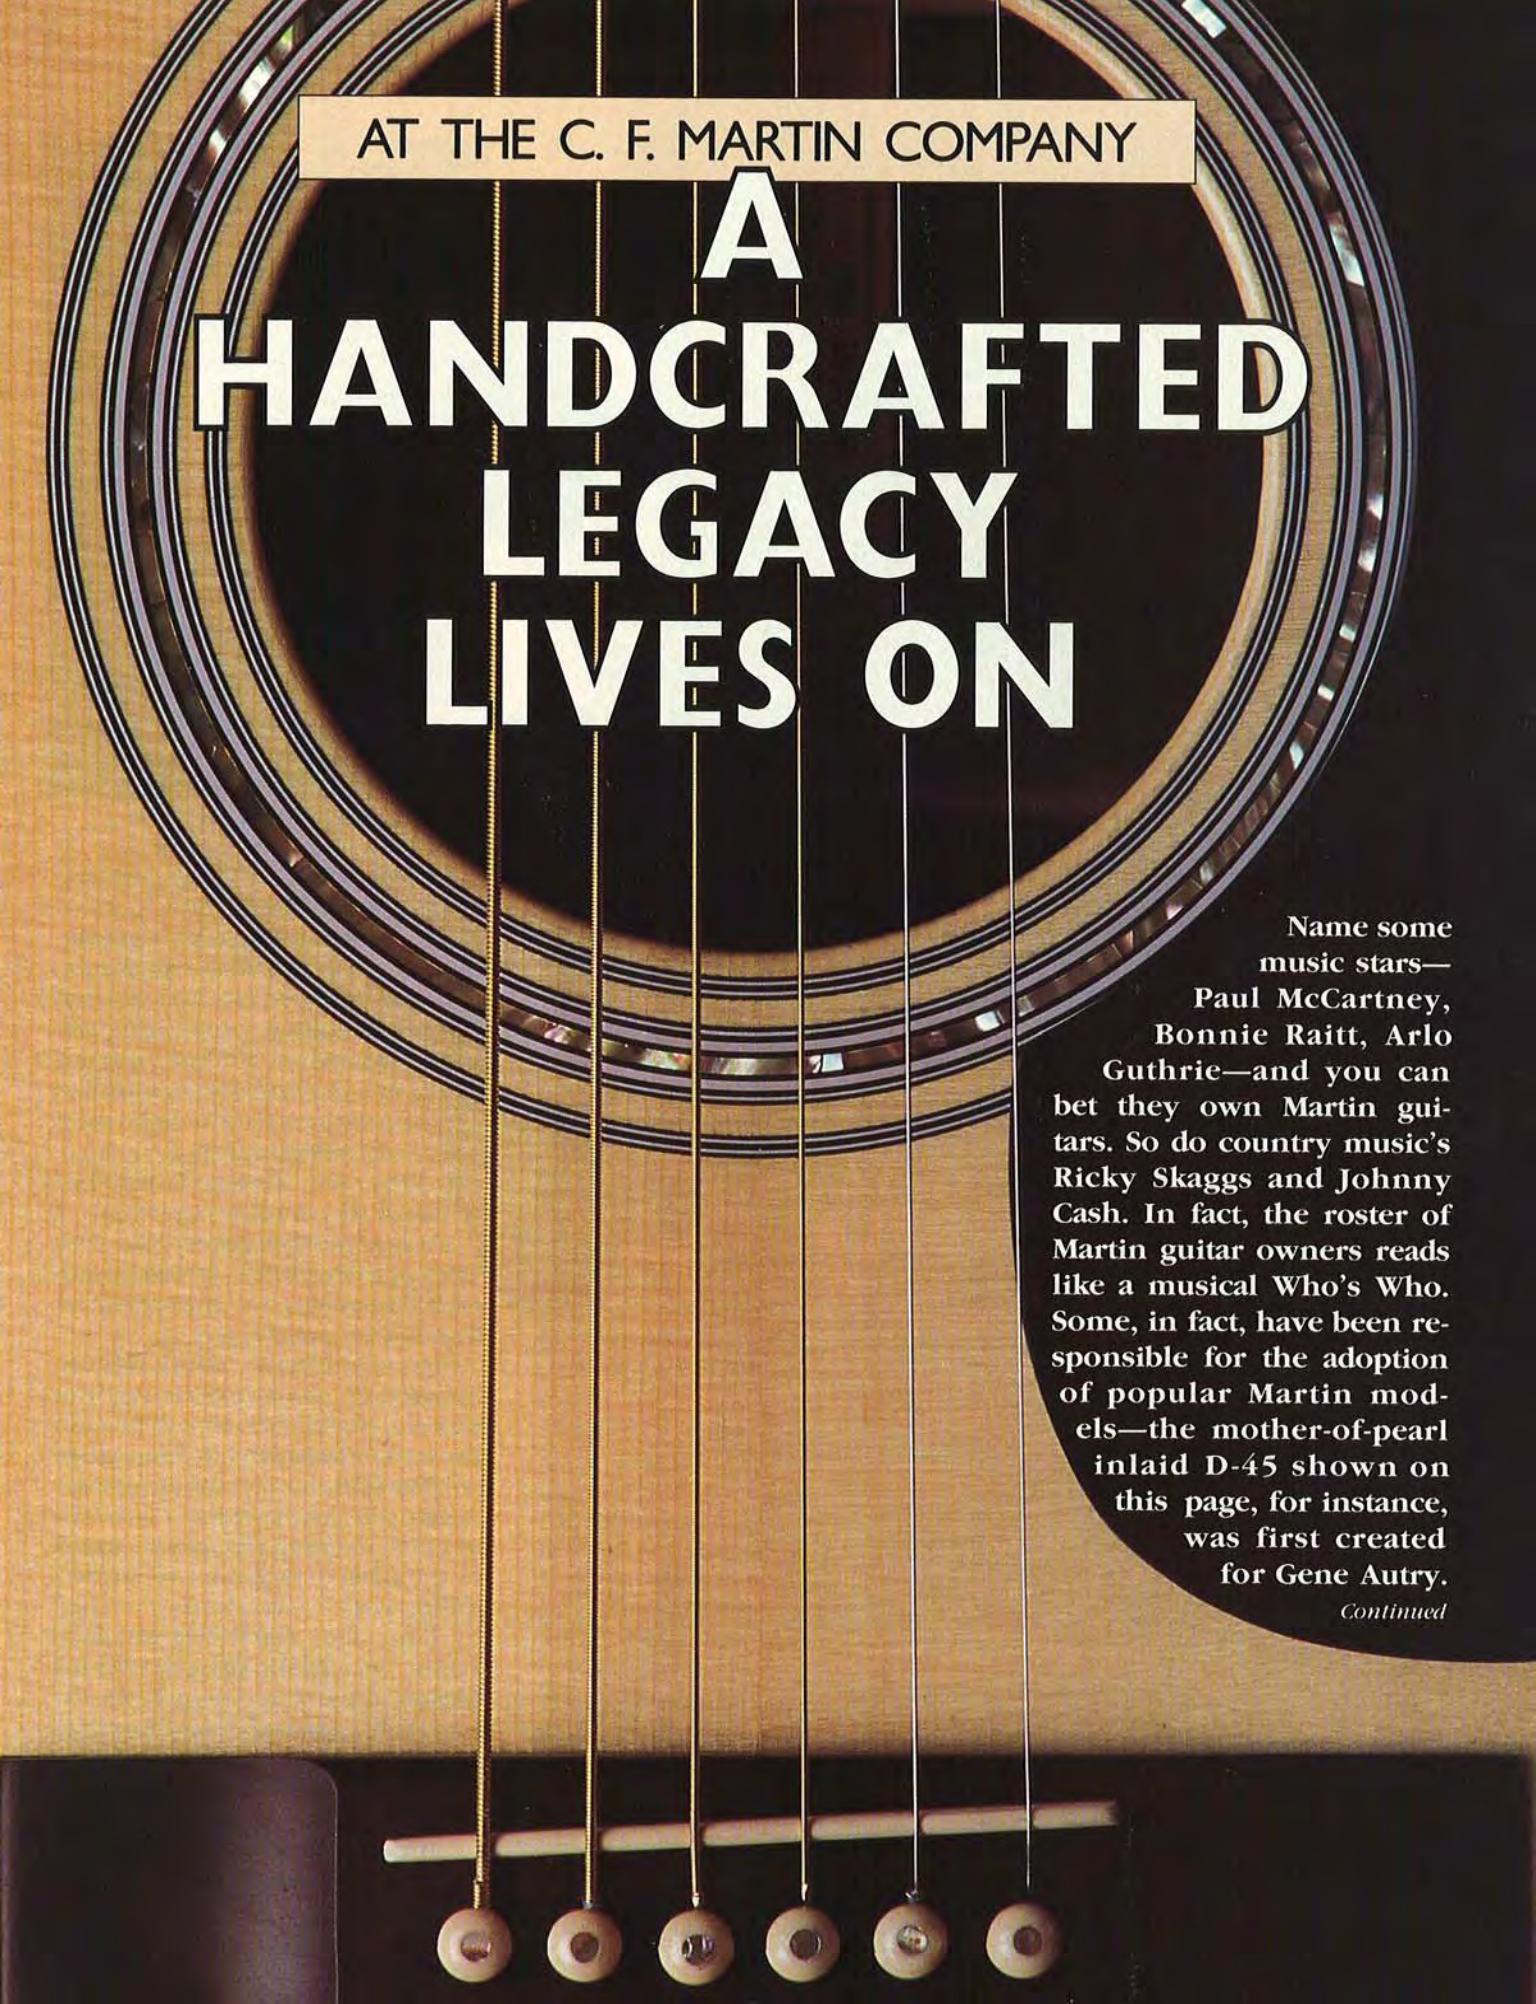

6 Adhere the liner to the lid interior. Then, using the Flap detail accompanying the Exploded View drawing and the flap mounting strip (F), attach the bottom edge of the flap to the lid.

Buying Guide

Briefcase hardware. Pair of brass combination locks with hasps, pair of lid supports, four feet, pair of hinges, .032 x 4 x 10" brass, 6" of $\frac{1}{8}$ " diameter brass rod. \$39.40 (U.S.) ppd. For the pigskin liner, add \$78 (U.S.). Bromen's Luggage, 209 Central Avenue, Osseo, MN 55369.

Hardwood kit. Two pieces of $\frac{1}{4} \times 4 \times 12\frac{1}{2}$ " oak, two pieces of $\frac{1}{4} \times 4 \times 18$ " oak, and two pieces of $\frac{1}{4} \times 12\frac{3}{4} \times 18$ " oak plywood. Kits also available in genuine mahogany and walnut. Red oak kit \$24.95 ppd., genuine mahogany kit \$27.95 ppd., or walnut kit \$34.95 ppd. (All funds U.S.) Woodworkers' Dream, 510 Sycamore Street, Nazareth, PA 18064. Call 800-247-6931 or 215/759-2837 to order.

AT THE C. F. MARTIN COMPANY

A HANDCRAFTED LEGACY LIVES ON

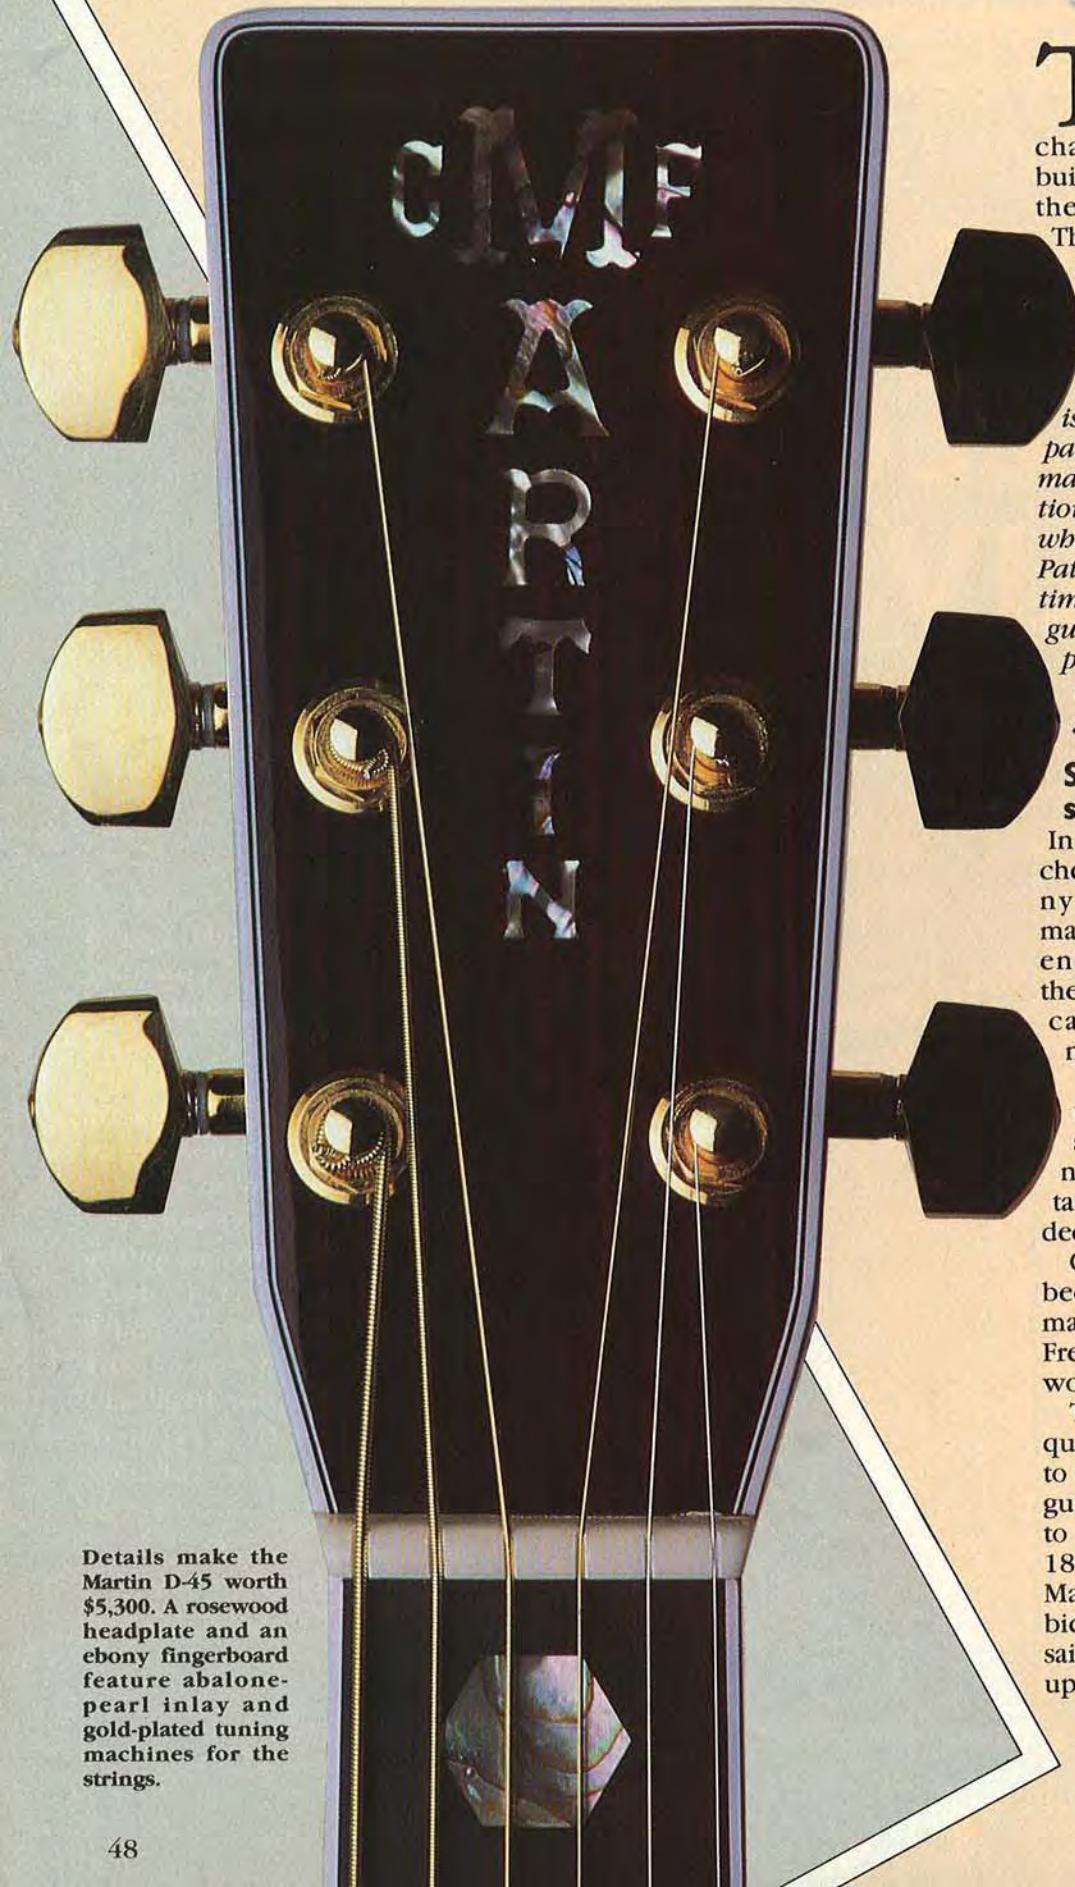

Name some
music stars—

Paul McCartney,
Bonnie Raitt, Arlo
Guthrie—and you can
bet they own Martin gu-
itars. So do country music's
Ricky Skaggs and Johnny
Cash. In fact, the roster of
Martin guitar owners reads
like a musical Who's Who.
Some, in fact, have been re-
sponsible for the adoption
of popular Martin mod-
els—the mother-of-pearl
inlaid D-45 shown on
this page, for instance,
was first created
for Gene Autry.

Continued

Print this article

Details make the Martin D-45 worth \$5,300. A rosewood headplate and an ebony fingerboard feature abalone-pearl inlay and gold-plated tuning machines for the strings.

The C. F. Martin Company has made guitars since 1833, and basically, hasn't changed its tune in the hand-building process responsible for the acclaim of its instruments.

That's because the words written by Frank Henry Martin in the company's 1904 catalog strike a familiar chord with employees even today: *'How to build a guitar to give this tone is not a secret. It takes care and patience. Care, in selecting the material, laying out the proportions, and attending to the details which add to a player's comfort. Patience, in giving the necessary time to finish every part. A good guitar cannot be made for the price of a poor one, but who that has used a good one regrets the extra cost?'*

Sound from six generations

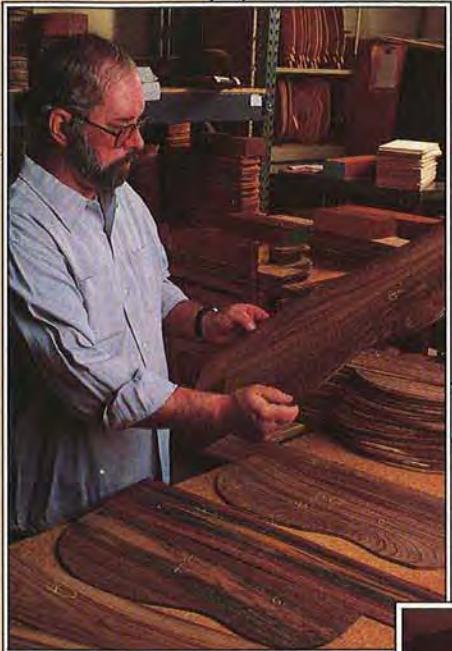

In the early 1800s, Markneukirchen, a village in northern Germany, was known for its violin makers. But there were other talented wood craftsmen living there, too. Among them, a skilled carpenter and cabinetmaker named Georg Martin.

One day Georg happened upon a traveler carrying a stringed instrument he had never before seen. It was a guitar. Fascinated by its sound, he decided to build one.

Over the years, Georg Martin became an accomplished guitar maker. When his son, Christian Frederick, became old enough to work wood, he too, built guitars.

The Martin's reputation for quality instruments grew, much to the dismay of the violin makers guild, which the Martins refused to join. The friction built until 1833, when Christian Frederick Martin, finally fed up with the bickering, packed his tools and sailed for the United States to set up shop in New York City.

A growing instrument repair and guitar-making business, plus a desire for the country,

◀ "I match the Brazilian rosewood backs and sides by color and grain pattern," says George Savercool. That's a demanding job since the thin-sawed stock rarely comes from flitches of the same log. Although the Martin company prefers quarter-sawed stock to avoid wild grain, it's not always available.

► "Only two Martin guitar models have sides bent in a heated press," notes Larry Fehnel. "All others must be bent to shape by hand on a stationary, electric bending iron heated to about 375-400 degrees."

▼ Bracing a guitar top strengthens it against the pull of the strings, but over-bracing can jeopardize the tone. "To increase treble response and volume, I use a chisel to feather the spruce braces where strength isn't as critical," notes Ralph Miller.

eventually led C. F. Martin to the green, rolling hills around Nazareth, Pennsylvania, in 1839. There, in a setting much like that he loved in his native Germany, he built guitars and sent them to New York to sell in the United States, and in time, in shops around the world.

During the 1850s, C. F. Martin's son, Christian Frederick, Jr., entered the business. In 1867, he succeeded his father as company president, as would other Martins after him. Today, in the sixth generation, Christian Frederick Martin IV heads the company. And, out in the shop, among the 100 employees who produce 9,300 guitars a year, he's called "Chris" as he makes the rounds.

Guitar players prove plenty picky

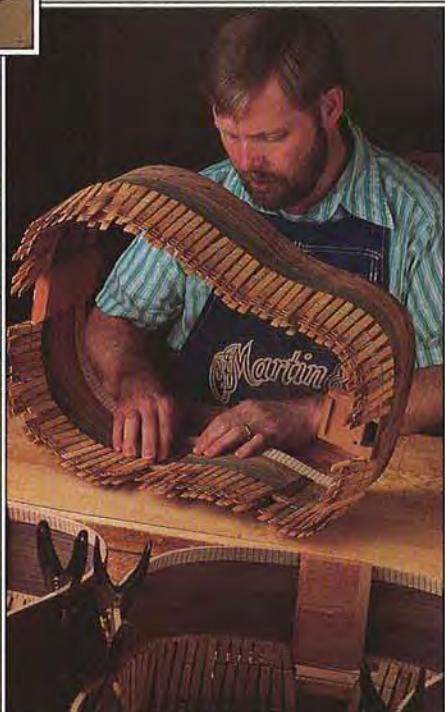

"Anything you do to or with a guitar has an effect. You even change the sound when you wrap your arm around it," notes Mike Longworth, musician, craftsman, guitar historian, and Martin's customer-relations manager.

That's why the choice of wood plays such an important part in the making of an acoustic guitar—different woods have different tones. And appearance, too.

"Martin guitar owners tend to be extremely picky, not only in the sound of an instrument, but in how it looks," notes Dick Boak, a guitarist as well as the company's advertising manager. "If they see any character or figure in the wood whatsoever, they think it must be a defect! And, I guess that's our fault because we like to think our quality control has been the most stringent of the industry." That's why only certain woods have become part of the company tradition.

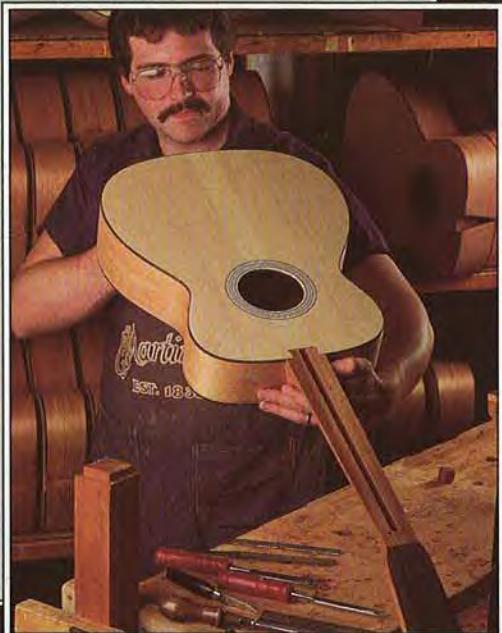

▼ David Anthony glues a ribbon inside a rosewood guitar body. "It's made from $\frac{1}{4}$ "-thick Spanish cedar, kerfed at regular intervals so it bends easily," he says. The ribbons—one at the top edge and another at the back—act as stiffeners as well as a gluing surface for the top and back. Ordinary clothespins clamp the ribbons in place.

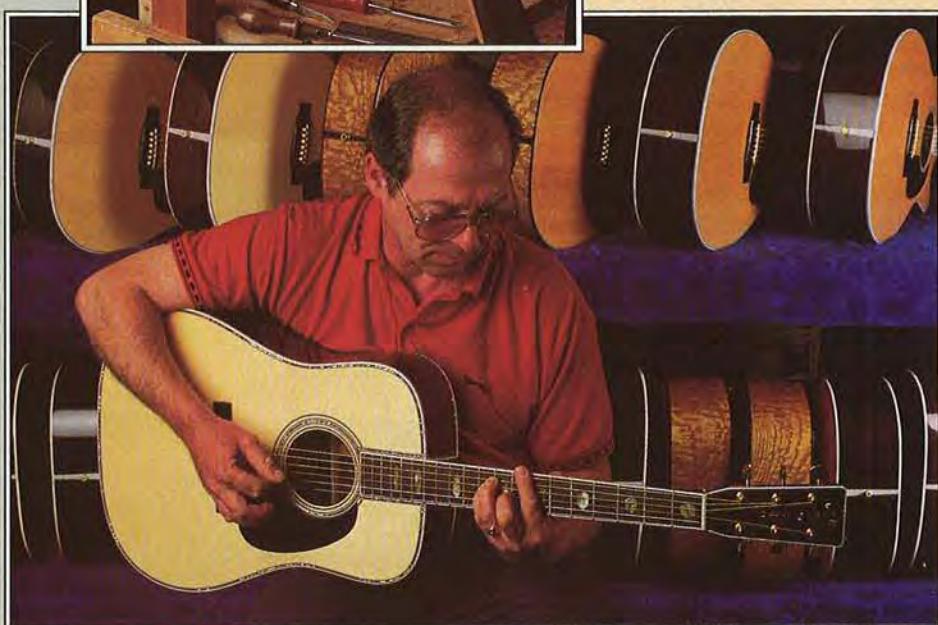

Continued

► With a drawknife and 15 minutes of time, Willard Silvius will bring the semi-shaped, mahogany neck to within $\frac{1}{16}$ " of final dimension, then it will be finish-sanded. "We hand-shape all guitar necks from a bandsawed and partially machined roughout," he says from his carefully arranged work space.

▼ Tim Teel eyes the crucial alignment of the neck to the body. "To get the two compound angles at the base of the neck, I make a few deft cuts with a chisel. Then, it fits perfectly into the body's dovetail," he notes. After fitting the neck, the parts go separate ways for finishing before final joining.

▼ "I play guitar at home for my own enjoyment, as I have for about 20 years," says Al Realo, "but it's part of my quality control job here." The D-45 model he's checking could be rejected for a speck in the finish or slight fretting inaccuracy. "Sometimes, nothing shows up until the strings start pulling on the body," Al adds, as he strums a popular tune.

Tops—finished to a thickness of less than $\frac{1}{8}$ "—must be strong enough to withstand the 190 pounds of pull applied by the steel strings. Yet, tops must have the flexibility to vibrate. "We've used spruce from all over the world," says Boak, "but quarter-sawed, vertical-grain Sitka spruce from Alaska and the Canadian Northwest makes an ideal top on steel-string guitars.

"The sides [$\frac{5}{16}$ " thick] and backs [$\frac{1}{8}$ " thick] of guitars are designed to absorb sound as well as reflect it," he continues. "Generally, hardwoods flavor the sound by doing both."

For sides and backs, Martin craftsmen prefer Brazilian rosewood, when they can get it. That hasn't been easy, though, since a 1969 export embargo made the wood practically unobtainable in quantity. Why does this species work so well? Besides being extremely strong and stable when quarter-sawed, the wood produces a deep, warm, and resonant bass, according to Boak. Other popular woods include East Indian rosewood (with tonal qualities similar to its Brazilian cousin), tropical American mahogany, Hawaiian koa, and European fiddleback maple.

Martin's traditional woods may eventually be supplemented by other species, though. "Given the dwindling supply of material resources," says Boak, "Martin is making a concerted effort to educate our guitar customers regarding the differences between the natural character markings of wood versus actual defects."

Old-fashioned hand craftsmanship lingers on

Inside the modern one-story, powder-blue Martin guitar plant on Sycamore Street, all pre-conceived assembly line impressions vanish. Instead of factory-like conveyor belts moving partially completed guitars from place to place, men and women ply their special

skills at individual work benches. The atmosphere belongs to the last century.

"What we do is teach someone to do one job, and they stay with that job until they are adept at it," explains Martin historian Mike Longworth. "Martin's philosophy creates master craftsmen and an unequaled product."

Highlighted by this individual craftsmanship, guitar making at Martin takes on the aura of a custom operation. Unlike the lonely luthier crafting single instruments, at Martin, stock models are built in batches of 6, 12, and 25.

Each neck begins as raw stock, and then is bandsawed and machine-shaped before the crucial fitting of one to the other (shown *opposite center*). At this step, Tim Teel must shave the wood from the compound-angled base of the neck so that it slips into the dovetail and aligns perfectly. That done, the neck is handcarved to its final shape with a drawknife, *opposite top*. Then, the neck and body part company, not to join again until they've been finished (see pages xx), detailed, and polished to perfection. When the two meet again, they'll make music.

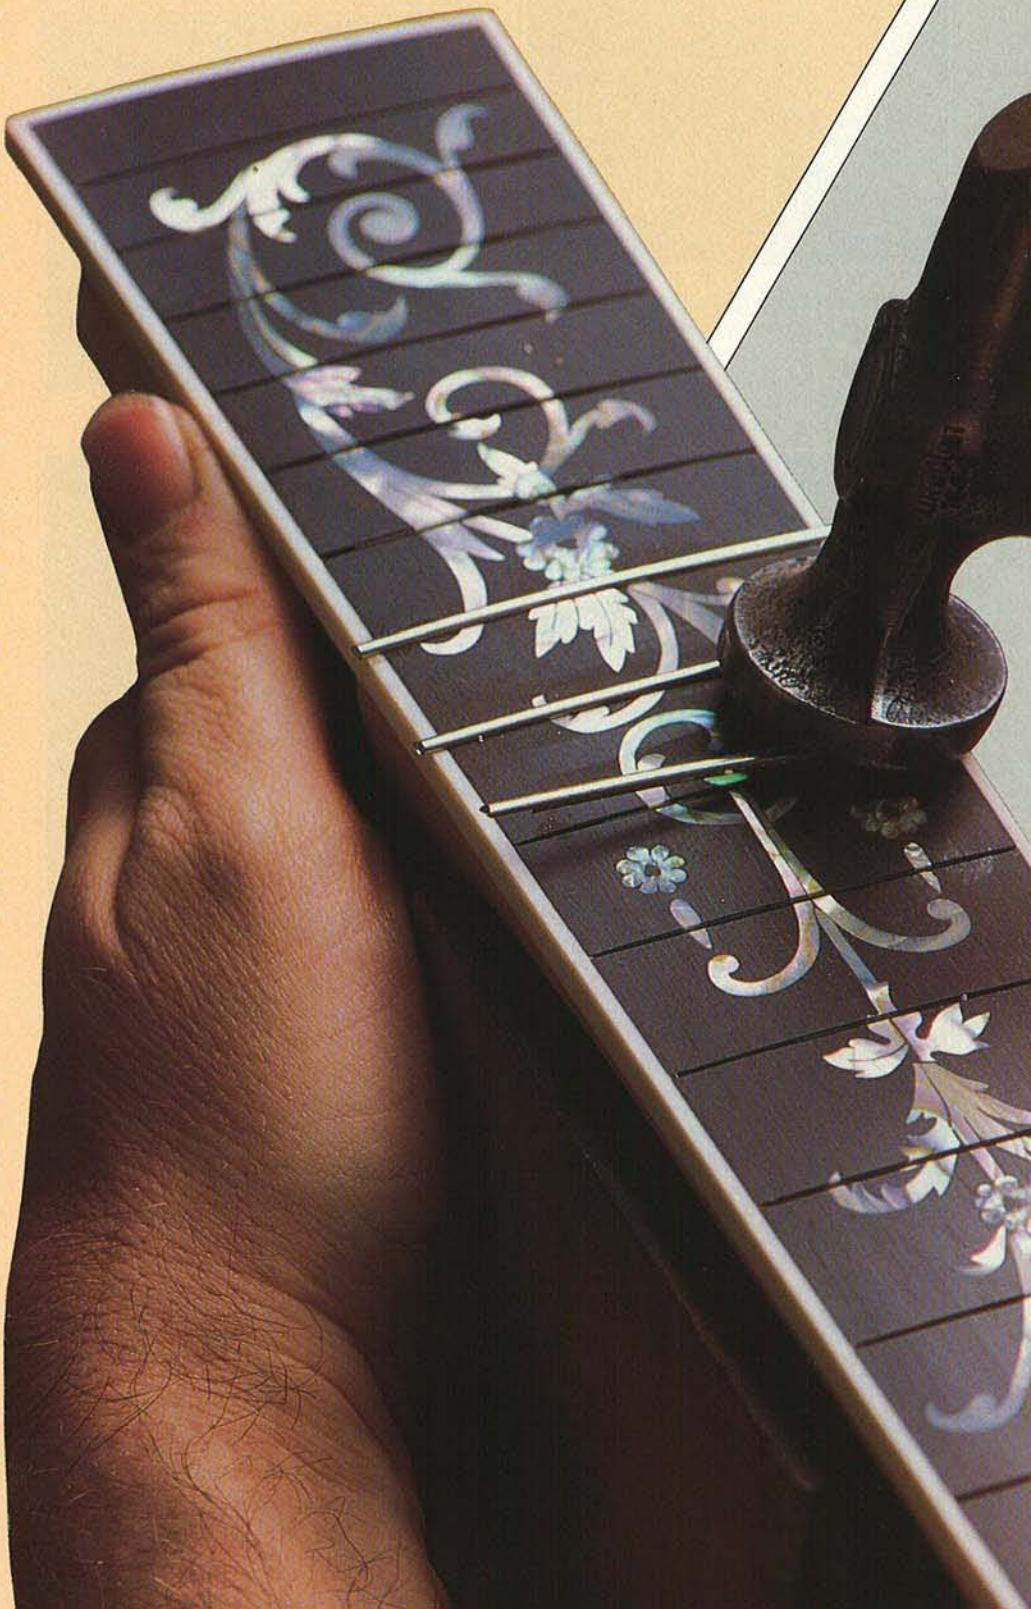

Ralph Miller, Martin's bracing specialist, sums up the company approach to guitar making, "Martin has a special way they want it, and that hasn't changed much in the 43 years I've been here."

Want to tour the Martin Guitar Factory?

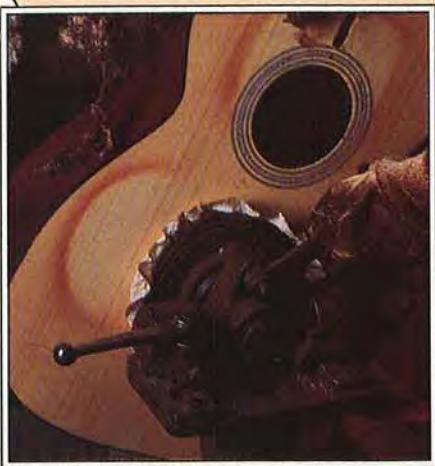

Tours of the Martin plant at 510 Sycamore St. in Nazareth, begin at 1:15 p.m., Mon.-Fri. There's also a small museum and The 1833 Shop, a retail outlet, offering souvenirs, used instruments, and accessories. The Woodworkers Dream, at 10 W. North St., sells native and exotic hardwoods, guitar parts, and kits. For a catalog, write C. F. Martin Co., P.O. Box 329, Dept. W, Nazareth, PA 18064 (call 215-759-2064). ♦

The hands of Dennis Kromer skillfully insert the thin metal frets into an ebony fingerboard. "This one has a custom abalone-pearl inlay of our 'tree of life' design," he notes.

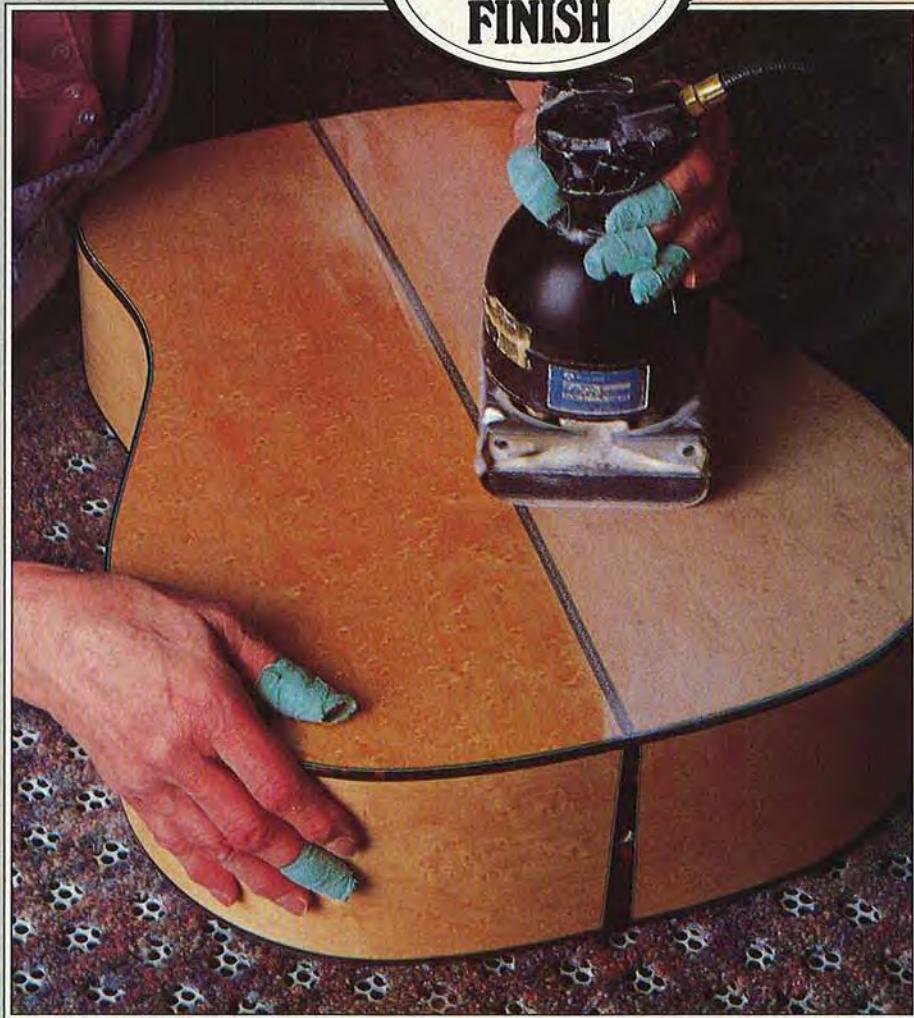

LACQUER THAT'S

At the C. F. Martin Company, a guitar not only has to look super and take abuse, it must sound great, too. But, you don't have to be a guitar maker to appreciate the finish they've refined over the last 60 years. Their tried and true lacquer sure performs!

IN SEARCH OF
THE
**PERFECT
FINISH**

Jeanette Smith sands a maple guitar body with 220-grit paper between lacquer coats. The bench top has dust evacuation.

There's no way around it: Attaining the perfect finish on a guitar takes time. That's because a finish on a musical instrument has to do several things. Says Dick Boak of the Martin company, "It has to be thin so as not to disturb the tone, beautiful to enhance the wood, durable enough to stand up to the instrument's often-rigorous handling, and stay flexible over time."

The rosewood Martin uses in their guitars made finding the perfect finish a double challenge. That's because rosewood has a high resin content that can contribute to adhesion problems, pigment bleeding, fisheyes, and sinking pores. And, the resin can impede the drying of some finishes, such as polyurethane.

So, Martin finishing centers on spray application of successive thin coats of nitrocellulose lacquer, with some twists. And, although you won't be able to exactly duplicate their factory process, there are some products that enable you to come close (see Buying Guide at end of article). Even if you don't make guitars, you'll find that this type of finish works great on anything that must look super, yet take use.

Wood awash in vinyl

"The final finish will only look as good as the wood underneath," Boak comments. At Martin, finish-sanding starts with 60-grit paper and ends with 180-grit, because too fine a grit would make the surface so smooth the finish wouldn't adhere. (A sponge and plastic cup in the sound hole keeps the guitar's inside free of sanding dust and finish.)

Martin does not stain the rich-grained rosewood on their guitars. But, an alcohol-based aniline dye on mahogany parts helps them match the rosewood. Oil-based stains, which react with lacquer, are avoided.

Print this article

MUSIC TO YOUR EARS

To ensure that rosewood's natural resins don't bleed through the lacquer finish, a worker sprays on a wash-coat of specially-formulated vinyl sealer immediately after the guitar has been sanded. "As well as holding in the rosewood resin, the sealer keeps our walnut-colored pore filler—which goes on next—from staining the wood," says Boak. "And, it actually helps the lacquer adhere."

Following a light scuffing or sanding with 400-grit paper, the guitar body receives the filler coat, used on all porous woods to provide a uniform base for the lacquer finish. "We brush the walnut-colored filler onto the back and sides [closed-grain woods like maple and spruce don't require filling]," Boak explains. After five minutes or so, when the filler develops a leathery texture, it's forced into the pores by hand with a bun made of T-shirt material filled with cotton wadding [photo, top left opposite]."

Guitar tops at this point get a fine sanding with 180-grit paper. After sanding, a finisher wets the top slightly with water to raise the grain, lets it dry, then sprays it again with sealer. When dry, the sealer coat undergoes another light sanding with 400-grit paper.

After that sanding, the entire guitar body gets a final sealer coat. This covers the colored filler on the back and sides, and adds protection to the top. Then two hours later, the guitar receives a spray-coat of lacquer sealer. "This cancels out the slight dissimilarity between the vinyl and the lacquer coats yet to come," notes Boak.

Warm lacquer and elbow grease

Within an hour after spraying on the lacquer sealer, another employee adds a coat of clear gloss lacquer. If dried overnight, the bodies would have to be resanded for the next coat to adhere.

Polishing the body with buffing compound and a lamb's-wool bonnet is Ed Morper's specialty. He's been creating mirrorlike finishes on Martin guitars for 18 years. Here, he works on rosewood.

The Martin company uses a nitrocellulose lacquer with a high solids content that is specially formulated to be sprayed warm, a technique that reduces viscosity for better flow. (Immersing a can of spray lacquer in 110–120 degree tap water does the same thing. *Never* heat it on the stove.)

"Depending on the coarseness of grain, we'll give the instrument two to three coats of gloss, allowing it to dry 45 minutes between," he says. "It's important to get a good buildup before sanding. Otherwise, you might break through to the vinyl layers, which shows up in the finish. So, after the lacquer cures for 48 hours, it's sanded with 220- to 280-grit paper [photo bottom left opposite]."

The back and sides of each guitar then go through the sequence of lacquering and sanding two more times, for a total of six coats. Tops, because their non-porous wood requires less finishing, receive four coats. According to Boak, "A thin finish aids the tone and won't check as easily."

Finally, to achieve the mirrorlike, high-gloss finish Martin guitar buyers expect, the instruments are polished first at low speed

Finishing Buying Guide

• **Sealer.** Behlen's Qualalacq clear sanding sealer, qt., no. 854, \$7.95.

• **Filler.** Behlen's Pore-O-Pac tintable paste wood filler, qt., no. 748 med. brown or no. 776 natural, \$10.90.

• **Lacquer.** Behlen's Qualalaq nitrocellulose, clear spraying lacquer, qt., no. 853, \$8.95. (Also Behlen's Jet-Spray 13-oz. aerosol cans, no. 739, \$5.95.)

• **Polish.** Mirro-Glaze Professional Cleaner No.4, 16-oz. bottle, no. 540 and Professional Cleaner No.7, same size, no. 541, \$8.50 each.

From Stewart-McDonald's Guitar Shop Supply. For catalog, write 21 N. Shafer St., Box 900, Athens, OH 45701. 800-848-2273 (614/592-3021).

• **Lemon oil, linseed oil (raw).** To protect and preserve exotic wood fingerboards. About \$3 pint at hardware stores and paint centers.

Photographs: Steve Uzzell

with a lamb's-wool buffing bonnet and a medium-grit, liquid, polishing compound, see above. After a final buff of the body at higher speed with a fine-grit compound, the guitar's neck is joined, the bridge located and glued, then it is strung, finely tuned, inspected, and shipped on its way.

Note: Guitar necks are finished the same as bodies, except that the ebony or rosewood fingerboards receive a special, non-hardening oil rather than lacquer. ♣

SUPER-SIMPLE TOOL

Sensible storage on wheels for your benchtop machines

Print this article

Most woodworkers we know have the same problem: not enough shop space. Well, we can't expand your shop, but we've come up with a tool cart guaranteed to make the most of the space you do have. Just mount three benchtop tools to the interchangeable shelves, put the tool you need on top, and store the others below deck until you need them.

Start with the basic cabinet

1 Cut the cabinet sides (A) and fixed shelves (B) to the sizes listed in the Bill of Materials.

2 Using the Exploded View drawing for reference, mark the dowel-hole centerpoints on each of the three shelves, and drill $1\frac{3}{16}$ " holes $\frac{1}{2}$ " deep where marked. From $\frac{3}{4}$ " dowel stock, cut four dowels 2" long each. Sand a slight chamfer on each end of each dowel. Set the dowels aside.

3 Cut or rout $\frac{3}{4}$ " dadoes and rabbits in the sides where dimensioned on the Exploded View drawing. Then, cut a $\frac{1}{4}$ " rabbet $\frac{1}{4}$ " deep along the back inside edge of each side piece to house the back panel (C).

4 Dry-clamp the parts (A, B) together, and check for square. Also, make sure that the front edges of the sides and fixed shelves are flush. Measure the opening, and cut the back panel (C) to size from $\frac{1}{4}$ " plywood or hardboard. Glue and clamp the shelves between the sides, and then glue and nail the back panel in place, checking for square.

Now, for the handles, foot, and casters

1 Rip and crosscut two pieces of $\frac{3}{4}$ "-thick solid stock (we used birch) to $1\frac{1}{2}$ " wide by $31\frac{1}{2}$ " long for the handles (D).

2 Transfer the Handle pattern to one end of each handle blank. Cut and sand the handle ends to shape. Drill the mounting holes, and glue and screw the handles to the cabinet where shown on the Exploded View drawing.

3 Now, cut the foot (E) to shape (we cut this from a piece of 2×4 stock). Drill the mounting holes and screw the foot to the cart. Then, drill the mounting holes and fasten a pair of casters to the opposite end. (We used regular casters; you might want to consider using locking-type casters.)

Add the shelves; you're nearly finished

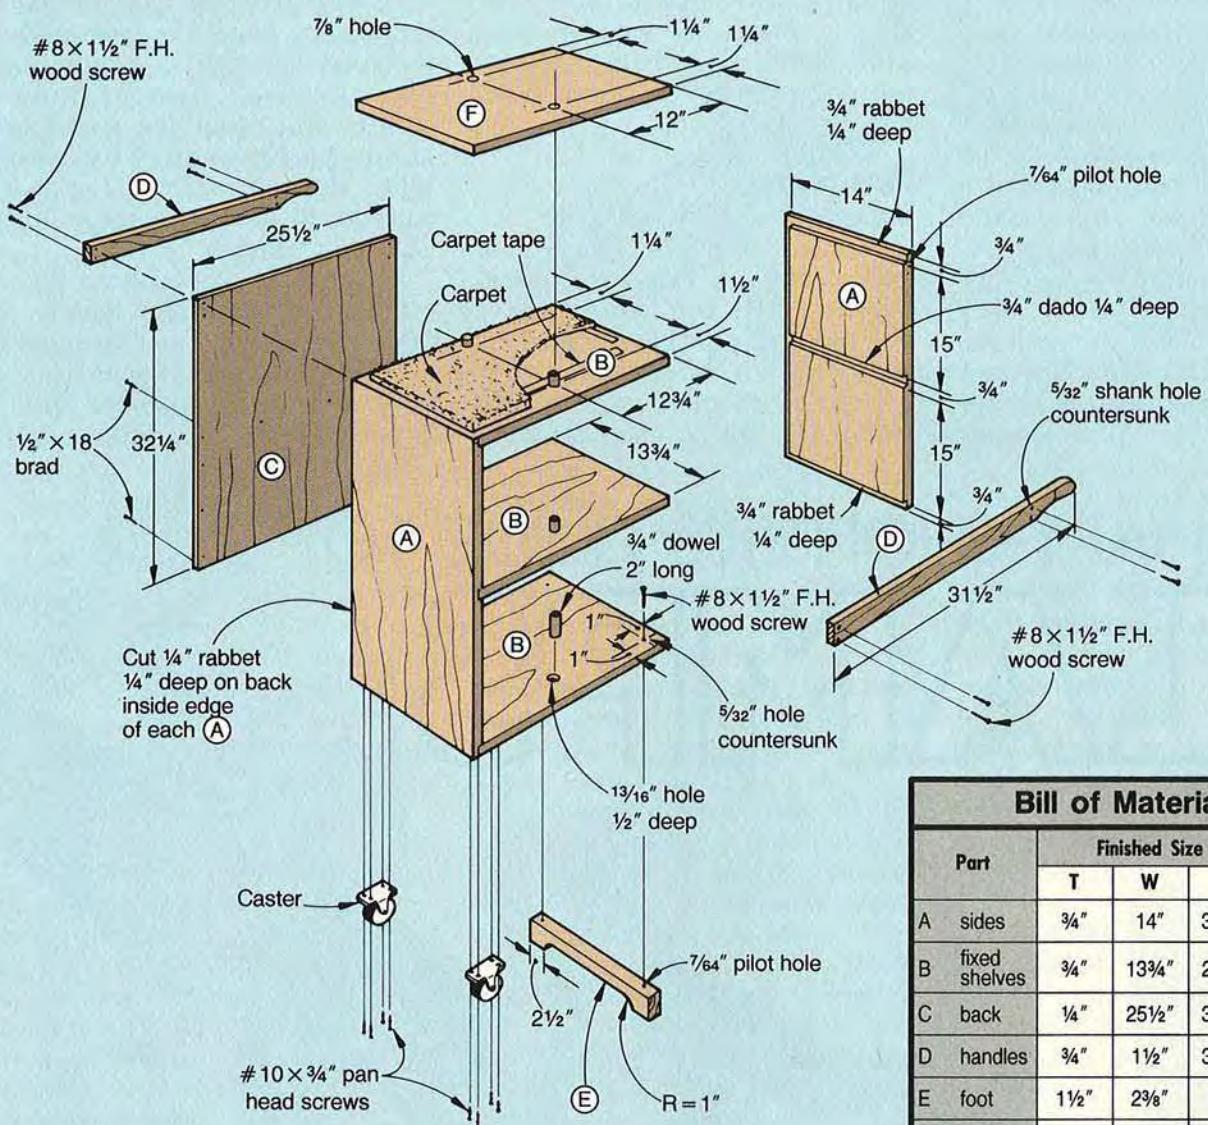

1 Cut the interchangeable shelves (F) to size. Bore a pair of $\frac{7}{8}$ " holes through each shelf where shown on the Exploded View drawing. The holes need to be centered over the $1\frac{3}{16}$ " holes in the fixed shelves.

2 For a glass-smooth finish, fill the voids and edges of the particleboard. (We applied Durham's Rock Hard Putty and let it dry for a couple hours. Then, we sanded the filled areas and added more putty where necessary.) Sand and paint the cart and shelves. (We applied several coats of sanding sealer, sanding between coats with 220-grit paper. We sprayed on a coat of semi-gloss enamel paint, allowed it to dry, and then sprayed on a second coat.)

3 To reduce vibration, cut a piece of carpet to the same size as an interchangeable shelf ($13\frac{1}{2} \times 24"$). Mark the locations and cut a pair of $\frac{7}{8}$ " holes in the carpet, and stick the carpet to the top shelf with double-faced tape.

4 Position your machines on the shelves, mark the locations on the shelves for the mounting holes, and drill the holes. Fasten the machines to the shelves.

At one time or another, you've probably heard a fellow woodworker advise, "You can never have too many clamps." How true! It's a rare woodworking project that doesn't demand the use of one or more of these invaluable shop aids. And, some projects require oodles and oodles of clamps. What's a woodworker to do? Though each person's needs differ, we thought you might find it helpful to know about each clamp that has earned a permanent spot in the WOOD® magazine shop. And, because "Buy another clamp" isn't the right answer to many clamping dilemmas, we'll also share some tips for getting the most from your clamps.

THE OLD RELIABLES

Some clamps, such as those shown on the first three pages of this article, have helped woodworkers for decades. And with good reason—they're indispensable in most any woodworking shop. Here's some help in building an inventory of these time-tested shop helpers.

Pipe clamps: inexpensive and versatile

If you can afford only one type of clamp over two feet long, we recommend that you buy a set of **standard $\frac{3}{4}$ " pipe clamps** such as those shown *below*. These all-around performers, which cost about \$12 apiece (not counting

the pipe), consist of a tail-stop that quickly adjusts along any length of $\frac{3}{4}$ " pipe and a stationary head with tightening screw.

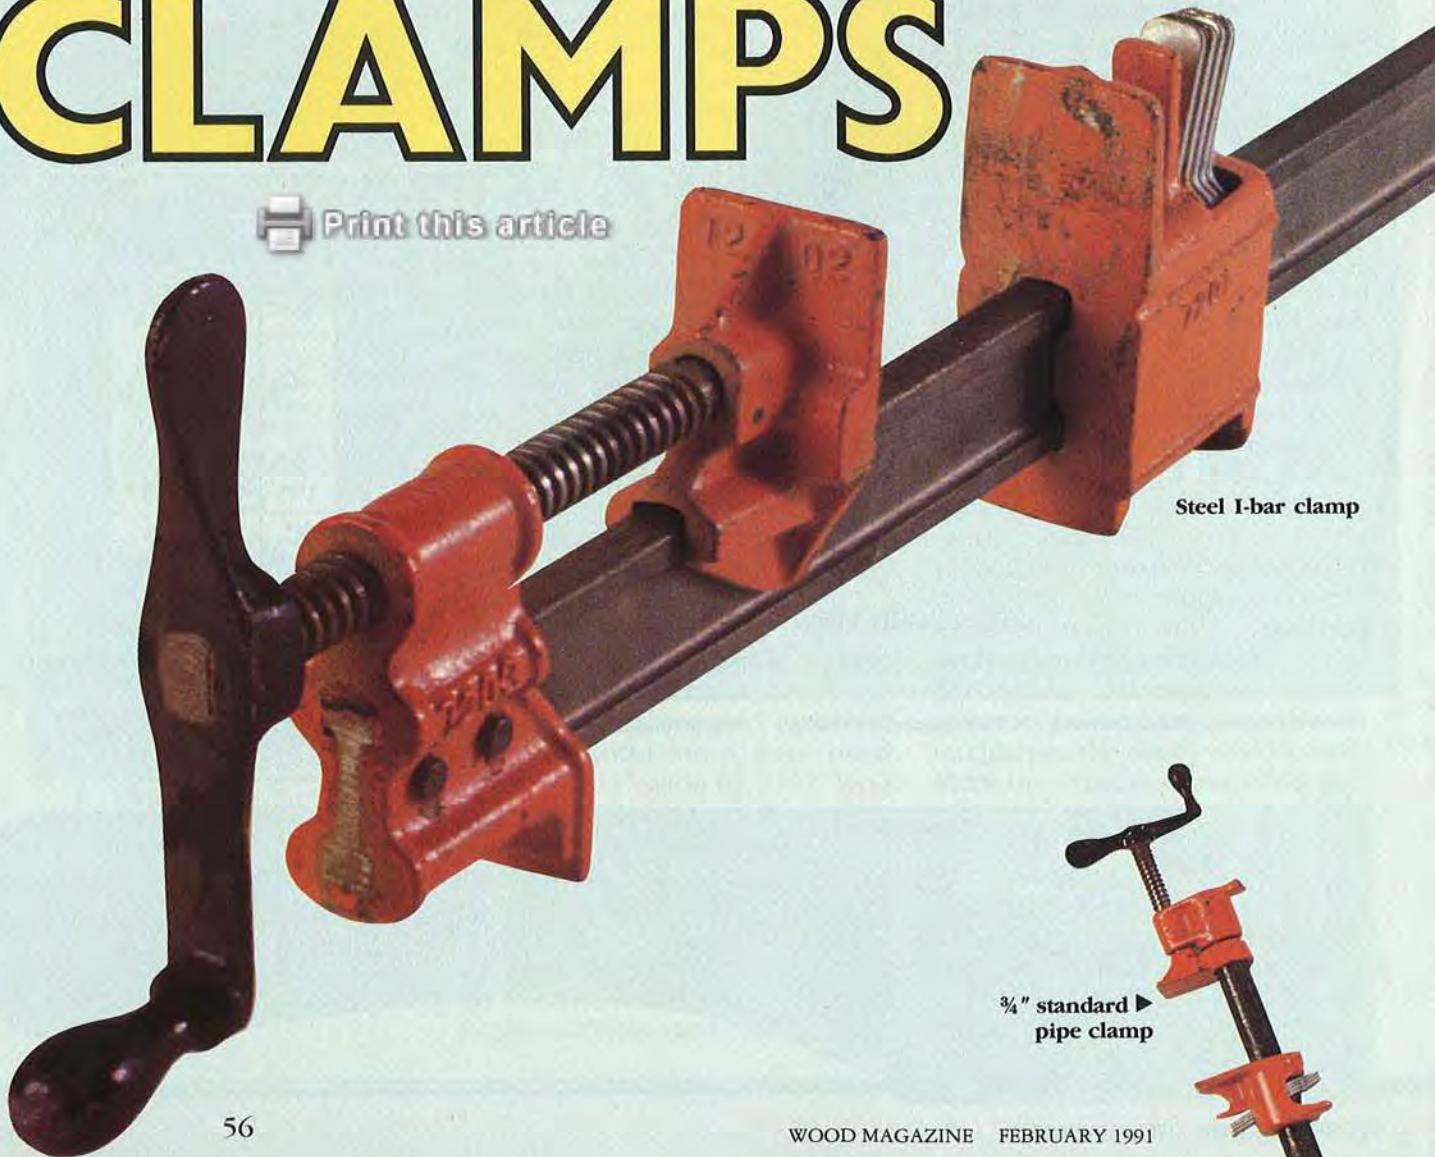

In addition to the fixtures themselves, you'll also need some threaded black pipe, which you can purchase at most home-centers and plumbing stores for about \$1 per foot. Why black pipe? This variety costs less than galvanized and holds the adjustable stop better.

For most woodworkers, a set of 10 pipe clamps in pipe lengths of 30" (four pipes), 42" (four pipes), and 62" (two pipes) will handle most jobs. To save storage space, it makes sense to postpone pur-

THE SMART-SHOPPER'S GUIDE TO **CLAMPS**

[Print this article](#)

Steel I-bar clamp

$\frac{3}{4}$ " standard ►
pipe clamp

chasing the clamp fixtures and pipes until a job demands them.

For a few dollars more, you can purchase fixtures for a **reversible pipe clamp** such as the one shown *below*. With this variation, the sliding end has a screw, so you can turn around the two heads and spread apart workpieces for quick disassembly.

Bar clamps: plenty of choices

For maximum rigidity over long spans, nothing tops a **steel I-bar clamp** such as the one *below*. We have four 5-footers in the

WOOD magazine shop for clamping edge-joined tabletops.

Although superior to pipe clamps, I-bar clamps weigh more and cost about \$30 apiece for 5' models.

Wooden bar clamps allow you to clamp broad expanses, too, but at considerably less cost than the steel I-bar type. You can buy one set of the fixtures shown *below* from the Hartford Clamp Co. for about \$15 (you have to supply a $1\frac{1}{4} \times 2\frac{1}{2}$ " wooden bar). We suggest you mill the bars from birch and then wax or oil their surfaces to prevent glue buildup.

Because of their speed and convenience, no clamp gets more use for smaller jobs than **light-duty steel bar clamps**. You can pur-

chase these in lengths from 6" to 36", but we find the 6" and 12" models most useful.

Two of the largest suppliers of these clamps, the Adjustable Clamp Co. (makers of Jorgensen- and Pony-brand clamps) and Bessey, offer different versions as shown by the models *below*. Both types have advantages. The Jorgensen clamp has a disc clutch that prevents the adjustable end from slipping. In our experience, these clutches normally work fine, but occasionally stick.

With the Bessey, the movable end grips tiny serrations along the bar, requiring you to apply forward pressure on the screw while you turn it. Though more expensive, the Besseys have larger pads with nonmarring plastic caps.

You'll pay \$9-\$10 for a 12" Jorgensen light-duty steel bar clamp and \$3-\$4 more for a similar Bessey clamp. Remember that you'll eventually need at least 12 of

these, and you can often save money by buying six at once.

C-clamps: affordable, with pressure to spare

You can buy C-clamps with capacities from 1" to 6" and throat depths up to $6\frac{1}{4}$ ". Because of their rigidity, these clamps apply tremendous amounts of pressure to your workpiece—a feature that comes in handy for thick laminations and stubborn workpieces.

Handscrews: the classic lives on

These timeless woodworking clamps, such as the one *above*, have wide, wooden jaws that operate independently, allowing you to clamp nonparallel surfaces. You can adjust the nonmarring jaws to spread pressure over the entire surface or concentrate the force on a small spot. They're fairly expensive at about \$18 for an 8"-jaw model.

Continued

Strap clamp

Spring clamps: instant positioning

These clamps give you an extra "hand" when you need to hold a workpiece in position before securing it with handscrews or other clamps. We keep a variety of spring clamps such as the one shown *below* in our shop, but we make the greatest use of 6"-long models with 2" maximum openings (\$3-\$4 each).

Cam-action clamps: lightweight and quick

For those delicate clamping tasks where the workpiece won't support a lot of weight, and you don't need a great deal of pressure, a cam-action clamp works nicely. As shown *below*, you can buy cam-action clamps with either wooden jaws or plastic jaws that resist glue better. Either type costs \$10-\$15 in lengths ranging from 8" to 24".

Strap clamps: buy the ratcheting type

These clamps, such as the one shown *above*, prove indispensable for jobs that require wrap-around pressure. Chairs, bowls, and other multisided projects benefit from this handy helper. With most strap clamps, you must tighten the strap with a screwdriver or wrench, but some have a rapid-action ratcheting mechanism that greatly simplifies this task. You just grab a built-in lever, flip it back and forth a few times, and there you have it. No fuss. You'll pay about \$10 for a 15"-long clamp.

SOME NICE LUXURIES

Sure, you can get along without the following clamps in your workshop, but we find them real time-savers or just plain handy.

Quick-Grip clamps: for times when you need three hands

True to its name, the Quick-Grip clamp from American Tool Companies works fast, thanks to its triggerlike action. And, you can one-hand these lightweight clamps, freeing your other hand to position the workpiece. We rely on four of the 12" Quick-Grips in the *WOOD* magazine shop, and love using them. However, they're not cheap at \$18-\$25 for the 12-36" models.

Locking clamps: We like the deep-jaw types

As shown *below*, both American Tool Companies (makers of Vise Grips) and Bessey have designed clamps with the locking-pliers mechanism. These cost \$10-\$30, depending on capacity, but work well for repetitive tasks. We often utilize the deep-jawed version because it extends up to 15" over the edge of a work surface.

◀ Wooden-jaw cam-action clamp (left). Plastic-jaw (right) ▶

Tru-grips: As versatile as a clamp can get

Griset Industries now makes two variations in its Tru-grip line of clamps: the original **Clamp 'N Tool Guide** shown in top and bottom views *below*, and the newer **Back-To-Back Bench Clamp** to its *right*. Both versions have a cam-action device that exerts light to medium pressure. The 50"-long Clamp 'N Tool guide makes a fantastic straightedge for routers or portable circular saws because of its low height (about $\frac{1}{2}$ "). The Back-To-Back Bench Clamp has jaws on both its top and bottom, so a pair will hold your workpieces securely in place atop a bench. Expect to pay \$30-\$50 per clamp.

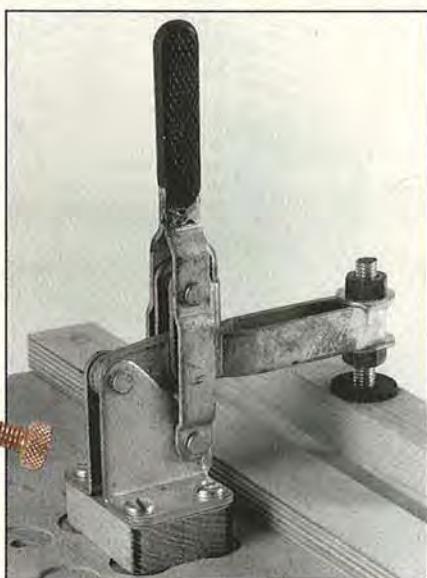

Quick-Grip ▶
clamp

Clamp 'N Tool ▶
Guide (*right*),
top and bottom views.
Back-To-Back
Bench Clamp (*far right*).

Toggle clamps: instant holding force for all your jigs

If you're into repetitive cutting or shaping that requires jigs, here's a must-have clamp. You can buy many varieties for \$10-\$15 each. With one of the most common types (shown *below* on a mortising jig), you push the handle forward to exert downward pressure on the workpiece. Similar versions have a low-silhouette handle for tight areas. Other models exert pressure horizontally for those times when you want to hold workpieces tight against a fence.

Toggle clamps place secure holding force wherever you need it.

Case clamps: handy for cabinetry projects

Case clamps, such as the model shown *below* from Hafele, work much like pipe clamps except they have long jaws that help you square up a cabinet as you clamp it. Two of these will cost you more than \$100, so we suggest them only if you build cabinets on a regular basis.

TIPS FOR GETTING THE MOST FROM YOUR CLAMPS

Before you go out and buy a new set of clamps, keep in mind that you might save some money by getting better performance from your current clamps. To give you a hand, we've rounded up some of the best pearls of clamping wisdom from the *WOOD*® magazine shop.

*Note: For eight great pipe-clamp tips, see pages 66 and 67 of the August 1989 issue of *WOOD* magazine. Many of these tips work equally well with bar clamps, too.*

BOE'S FIVE COMMANDMENTS FOR PROPER CLAMPING

Boe knows clamps (Jim Boelling, *WOOD* magazine's project builder, that is), so we asked him to come down from his workshop with five of his best clamping commandments. As always, Boe came through with some dandy tips.

I Thou shalt commit to dry clamping. Before you put a drop of glue to any surface, dry-assemble and clamp your workpiece. This way, you'll know if the pieces fit and whether you have enough clamps to get the job done properly.

III Thou shalt not overclamp. No amount of clamping pressure has ever turned a bad joint into a good joint. So, re-machine ill-fitting parts rather than force them into alignment with clamps. Sooner or later, badly fitted joints will come back to haunt you.

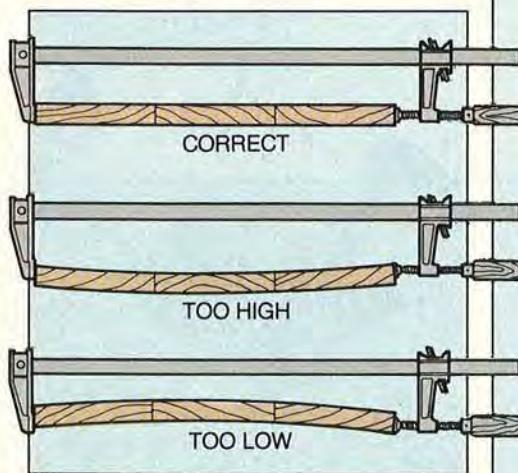

Print this article

II Thou shalt spread the pressure evenly. Some clamps, such as most bar and C-clamps, exert pressure in small areas. So, place auxiliary blocks of wood between the clamps and workpiece to spread out the pressure evenly.

IV Thou shalt protect the workpiece. If you're not careful, clamps will dent or stain your project's surface. To be on the safe side, place wooden pads over the jaws of the clamp. To prevent glue from reacting with the metal clamp and staining the wood, lay a protective sheet of waxed paper between the metal bars of a clamp and the workpiece. Make sure the jaws of your clamps are free of grease, dirt, clumps of dried glue, or other debris.

V Thou shalt properly position the line of pull. Whenever you clamp edge-joined boards, make sure the clamp screw and opposing jaw line up with the center of the joined boards. If you position the clamp a little high or low as shown below, bowing likely will result.

FANCIFUL FLOWERS

FROM FOUND WOOD

Don Hart of Pasadena, Texas, enjoys transforming wood that most people consider useless into beautiful turned objects. For this project, he salvaged a downed limb from a neighbor's pear tree to create a stylish bouquet of flowers.

 Print This Article

Attach a wooden auxiliary faceplate to a 3" metal faceplate (see the drawing below right for reference). After you find a 4"- to 6"-diameter limb, bandsaw it down the center through the pith. Next, cut a 2"- to 2½"-diameter plug from the limb section where shown. Using cyanoacrylate adhesive (epoxy also works), center and adhere the plug to the auxiliary faceplate.

With your lathe running at 1,500 rpm and using a $\frac{1}{4}$ " spindle gouge, start at the rim and rough-shape the outside of the flower. (See the Full Sized Section View drawing.) Try to leave the bark on the rim of the turning.

Don suggests that you begin hollowing the flower interior with a $\frac{1}{4}$ " bowl gouge. Alternate back and forth, hollowing the inside and then refining the shape of the outside until the wall thickness of the turning measures about $\frac{1}{16}$ ". He also advises putting a fine bead of cyanoacrylate on the rim to keep the bark from separating from the wood.

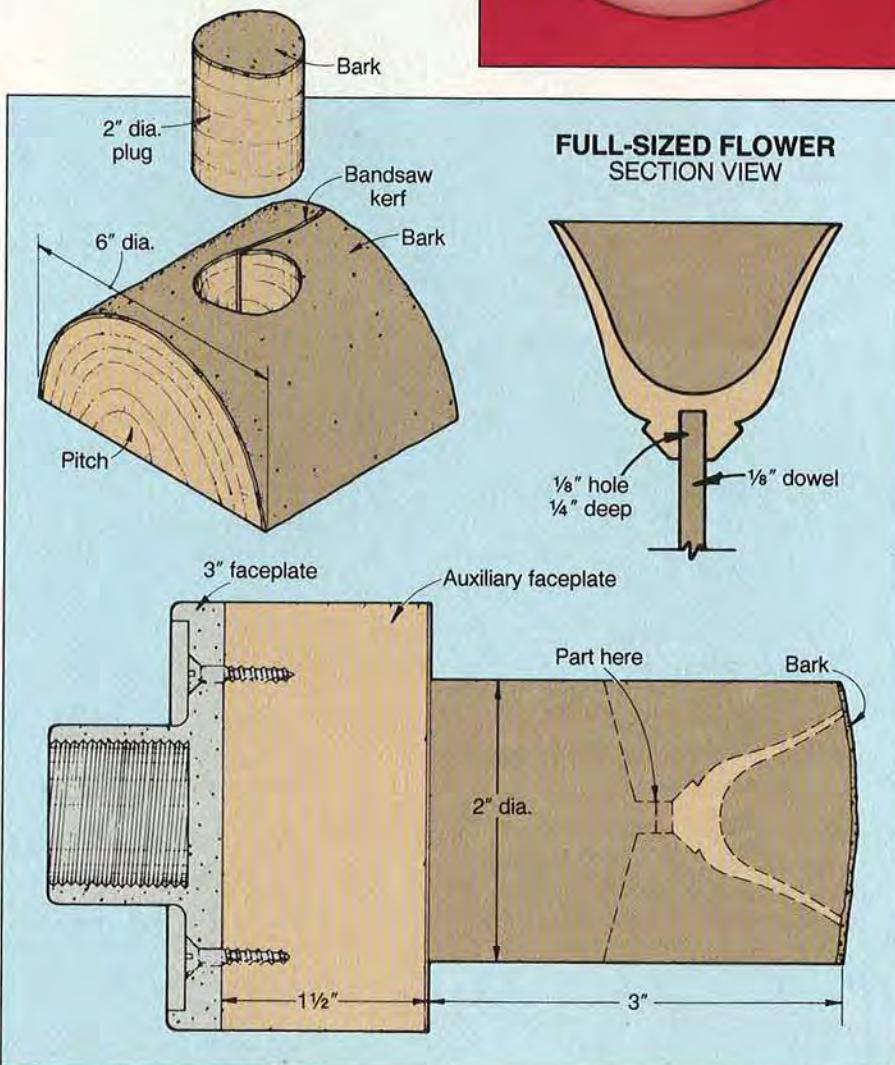

Slow your lathe to 800 rpm, and sand the flower. Make the final shaping cuts on the base with a $\frac{1}{4}$ " spindle gouge, and then sand that area. With the lathe running, apply a light coat of paste wax to the turning with a cloth, being careful not to let the cloth catch on the rough bark edge.

Part the flower from the faceplate and drill a $\frac{1}{8}$ " hole $\frac{1}{4}$ " deep into the base bottom. To form the stem, soak a piece of $\frac{1}{8}$ " dowel stock in hot water for about 10 minutes. This will enable you to bend the dowel and form a more realistic-looking stem.

ARIZONA TURN

HOT SHAPES FROM THE SOUTHWEST

Recently, the Arizona Woodturners Association organized a monthlong members' exhibit at Arizona State University in Tempe. Shown here are selected pieces from that show. The Phoenix-based club, a chapter of the American Woodturners Association, consists of 42 beginning, intermediate, and professional woodturners.

Print this article

Greg Campbell, Tempe
7½" diameter, 5¼" high, above left.

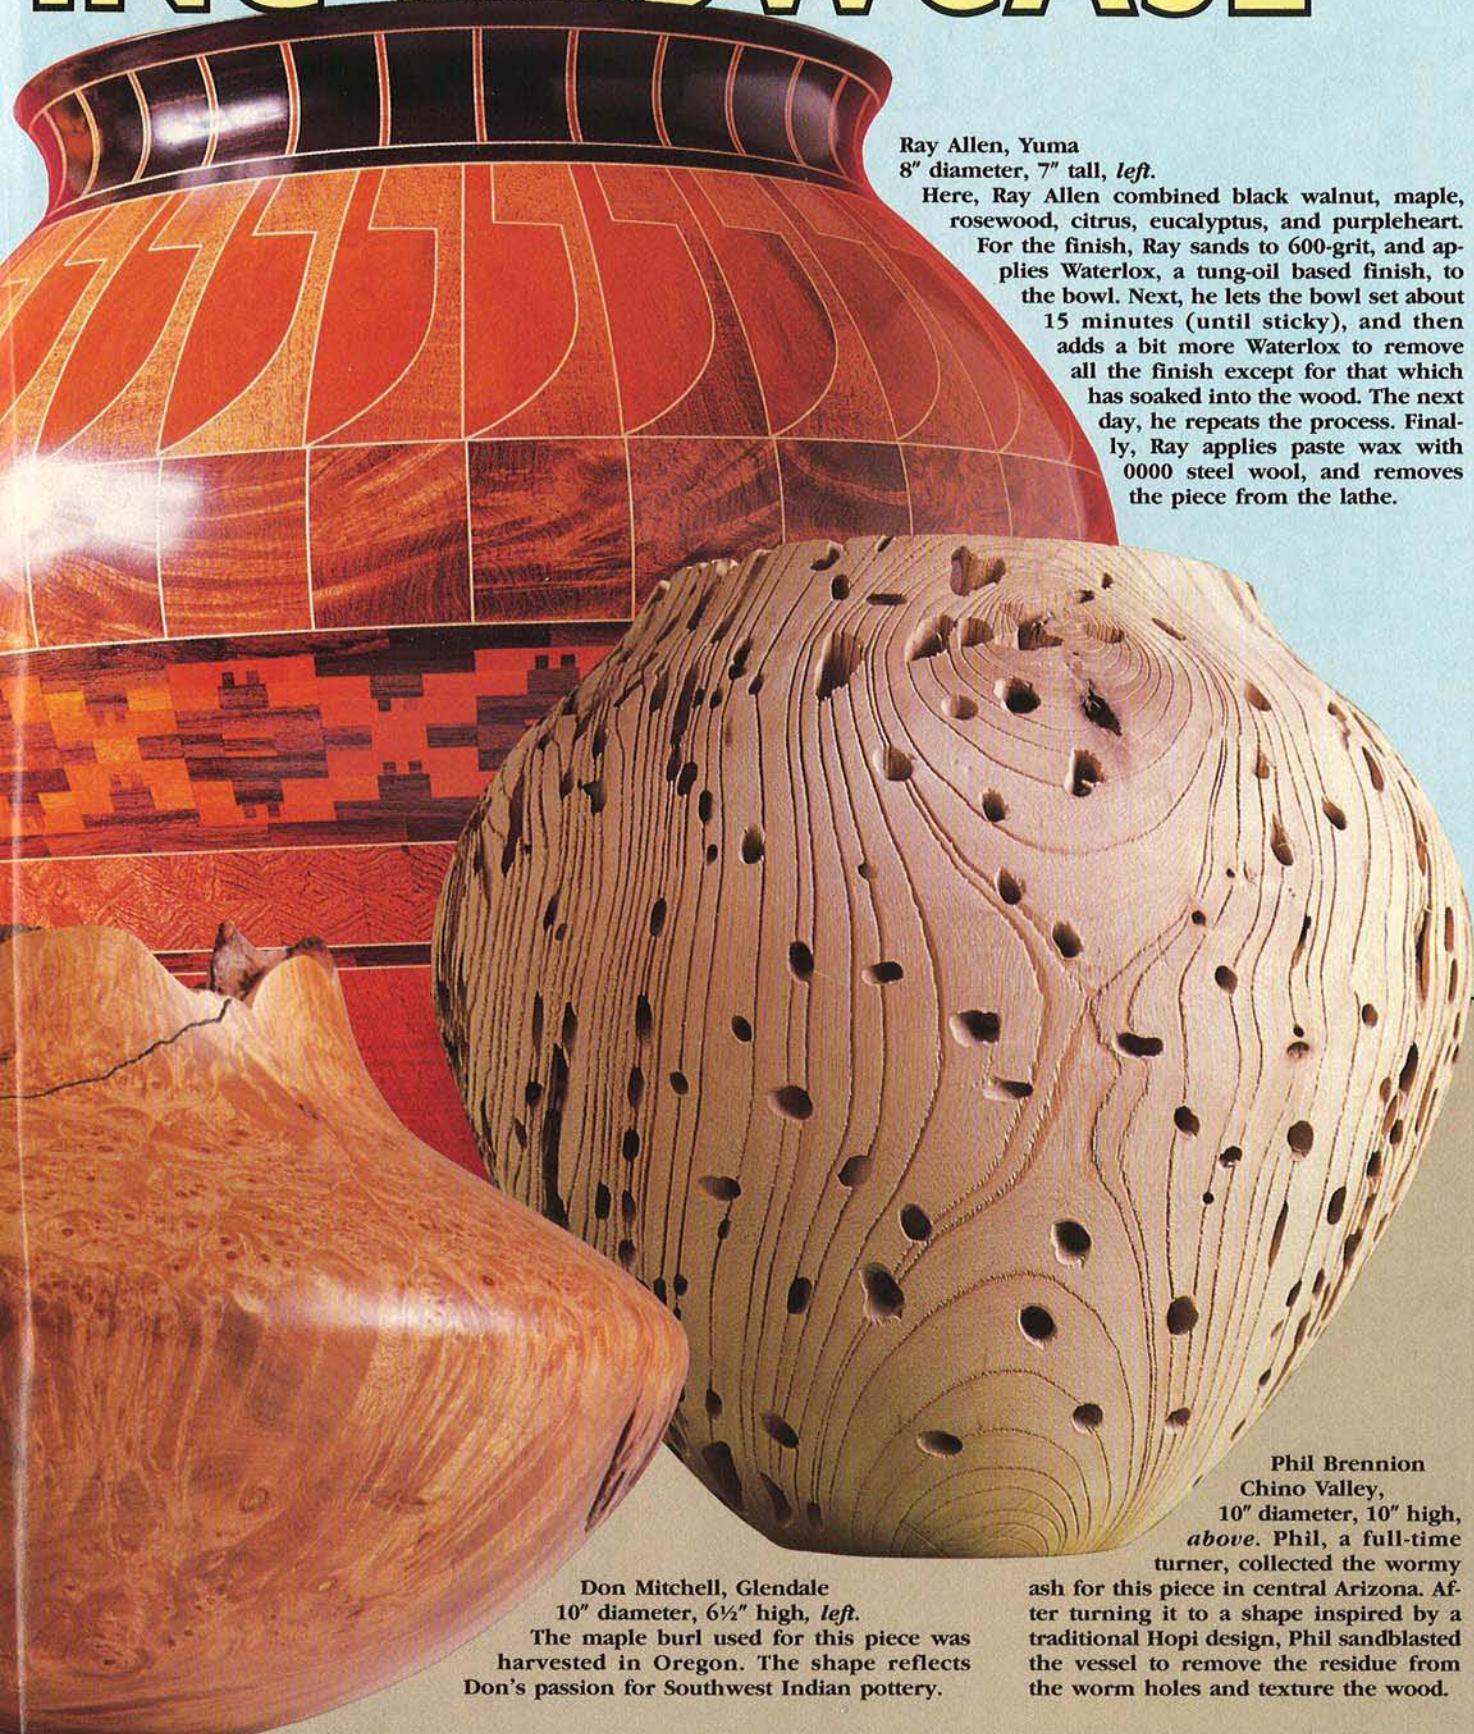

Greg found New Zealand walnut beautiful to turn and sand when he created this masterpiece. He shaped the inside and outside of the base and formed the $\frac{3}{16}$ "-thick walls with a roundnosed scraper. Greg used Watco Natural Oil for the finish.

Jim Stephenson, Tempe
5½" diameter, 7" high, above right.
Jim used ash veneer and ebony for the base, maple and walnut burl for the midsection, and walnut and ash for the top. Jim's eye for detail carries over from his business—Palo Verde Machine—a manufacturer of precision parts for aircraft and armaments.

Ray Allen, Yuma
15" diameter, 13" high, above center.

Ray's polychromatic turning consists of 1,241 pieces of mesquite, pernambuco, rosewood, holly, bubinga, and ebony. The feather pattern near the bowl's top reflects a pottery design found at New Mexico's Santa Clara Pueblo. Ray adapted the shape from a photo of a bowl dated 100 B.C. to 200 A.D., and unearthed at the Mica grave at the Hope-Well-Mound site in California.

ING SHOWCASE

Ray Allen, Yuma
8" diameter, 7" tall, *left*.

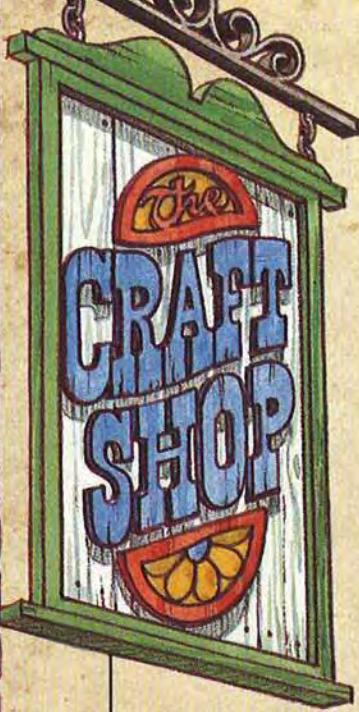

Here, Ray Allen combined black walnut, maple, rosewood, citrus, eucalyptus, and purpleheart. For the finish, Ray sands to 600-grit, and applies Waterlox, a tung-oil based finish, to the bowl. Next, he lets the bowl set about 15 minutes (until sticky), and then adds a bit more Waterlox to remove all the finish except for that which has soaked into the wood. The next day, he repeats the process. Finally, Ray applies paste wax with 0000 steel wool, and removes the piece from the lathe.

Don Mitchell, Glendale
10" diameter, 6 1/2" high, *left*.

The maple burl used for this piece was harvested in Oregon. The shape reflects Don's passion for Southwest Indian pottery.

Phil Brennion

Chino Valley,
10" diameter, 10" high,
above. Phil, a full-time
turner, collected the wormy
ash for this piece in central Arizona. Af-
ter turning it to a shape inspired by a
traditional Hopi design, Phil sandblasted
the vessel to remove the residue from
the worm holes and texture the wood.

RIDE THE WIND

An intarsia wall hanging that's a breeze to build

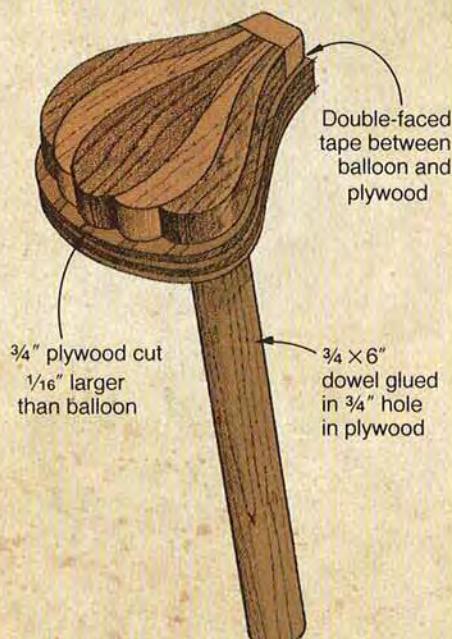

[Print this article](#)

To make the balloon, plane or resaw two pieces of stock (we used oak and walnut) to $\frac{3}{8}$ " thick. Cut a piece from each that measures $3\frac{1}{4}$ " wide by $3\frac{3}{4}$ " long. With double-faced tape, join the two pieces face to face. Using carbon paper, transfer the balloon pattern to the top piece. Cut the balloon outline to shape with a bandsaw fitted with a $\frac{1}{8}$ " blade or a scrollsaw.

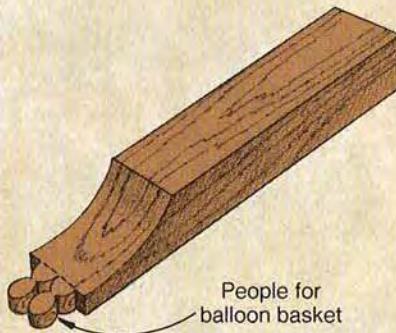

Trace the balloon's outline onto a piece of $\frac{3}{4}$ " plywood. Cut the plywood to shape, and bore a $\frac{3}{4}$ " hole about halfway through it. Glue a 6"-long $\frac{3}{4}$ " dowel into the hole in the plywood.

Cut the balloon pieces to shape. Mix the parts (you'll have enough for two balloons). With hot-melt adhesive, spot-glue the parts together and then to the plywood. Drum- or belt-sand the surface of the balloon to shape (see the Side View for reference).

Remove the balloon pieces from the holder, scrape off the hot-melt adhesive, and sand a slight round-over on the interior edges of each balloon piece.

As shown on the sketch *below*, transfer the shapes of the people and basket to the end of a piece of $\frac{3}{8}$ " maple and oak respectively. (It's easier to cut and sand the tiny pieces when they're part of a longer piece of stock.)

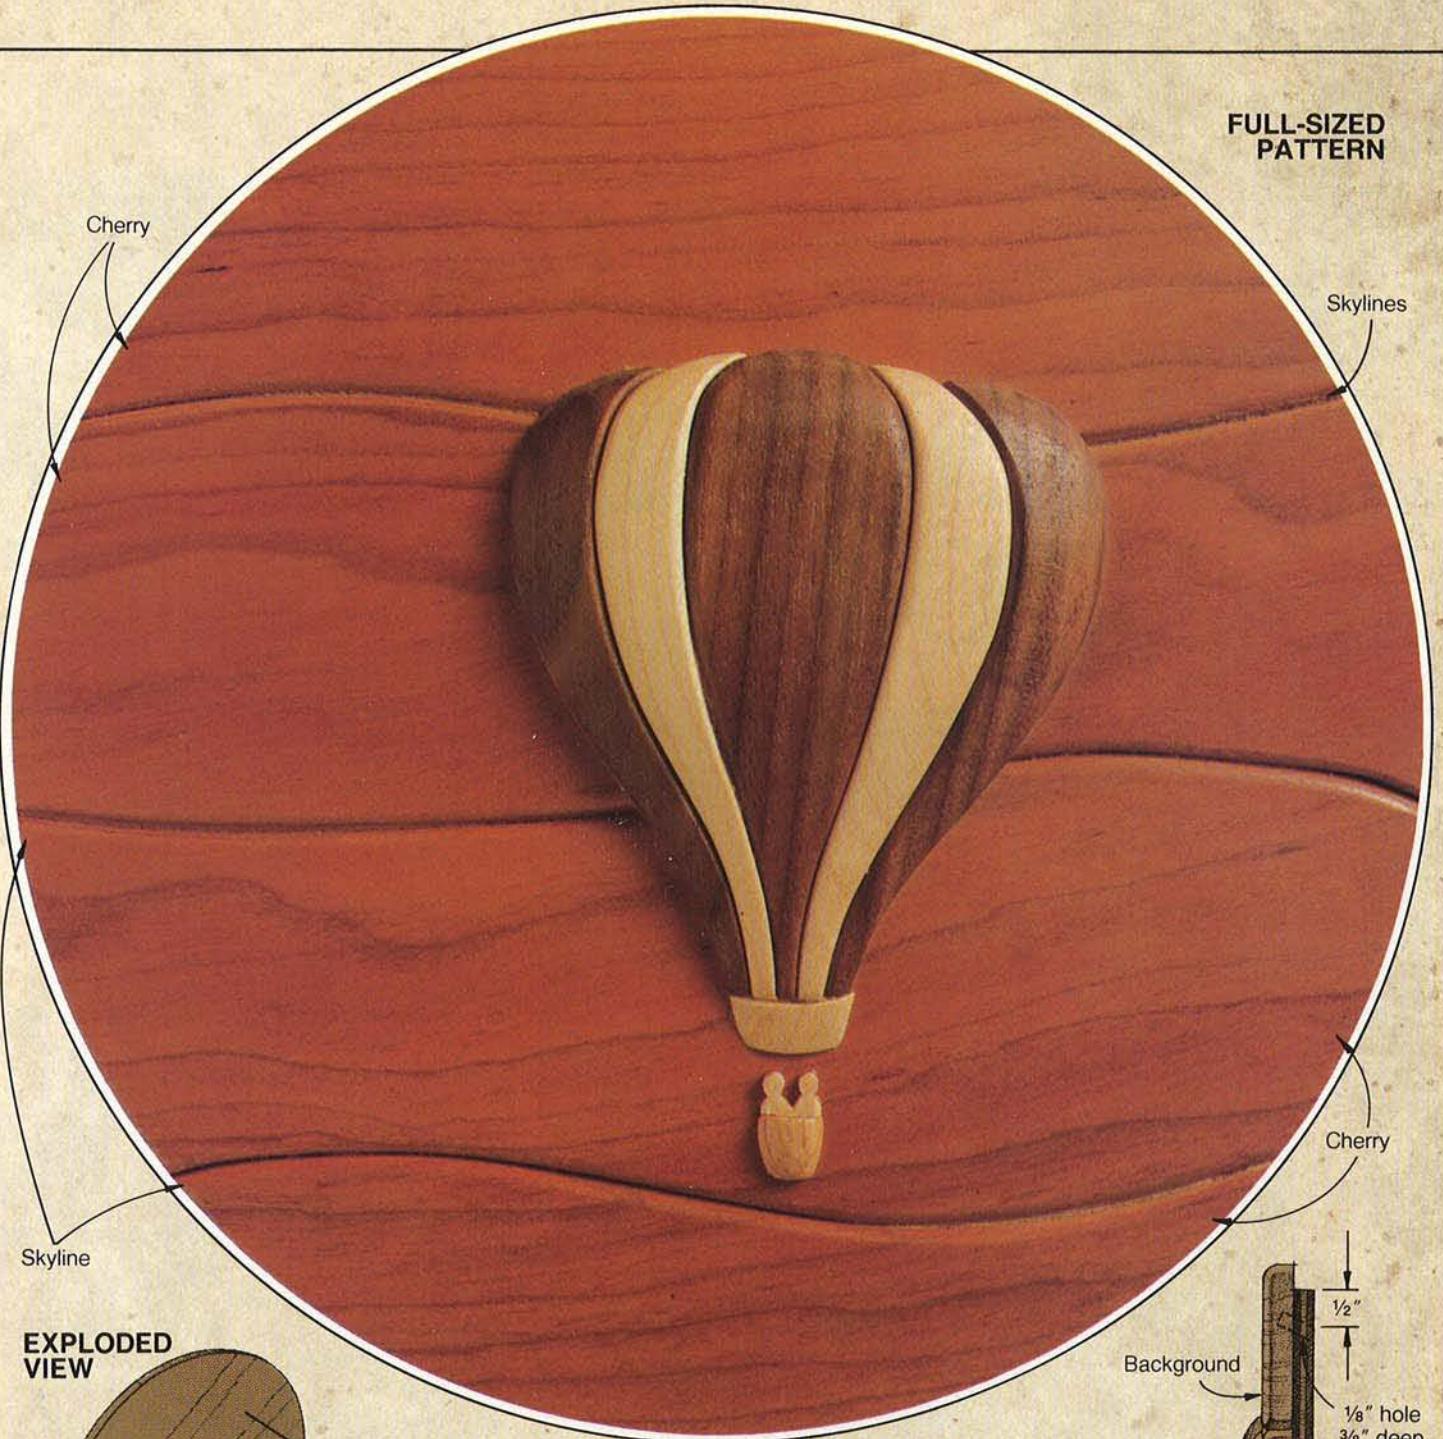

Cut and sand the basket and people to shape, and crosscut them from the end of the strips.

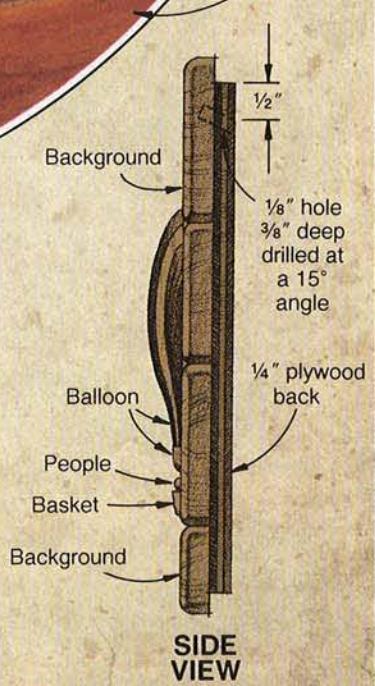

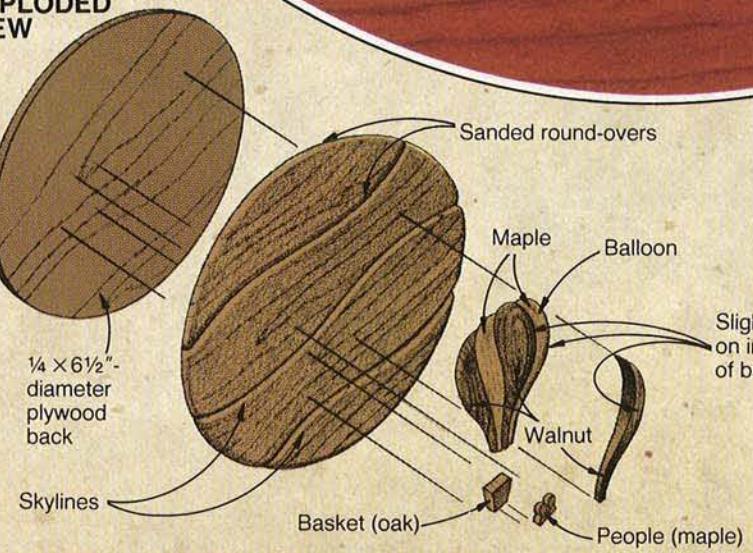

Transfer the sky pattern to a $\frac{1}{2}x8x8$ " piece of cherry. Bandsaw slightly outside the pattern's perimeter. Cut the individual sky pieces to shape. Sand a slight round-over along all edges of each sky piece. Cut a $6\frac{1}{2}$ "-diameter disk from $\frac{1}{4}$ " plywood.

Finish-sand all the parts. Glue the sky pieces to the plywood disk. Now, starting with the center piece, glue the balloon to the sky using the photo as a positioning guide. Then, glue the basket and people to the sky where shown. Add the finish. Drill a $\frac{1}{8}$ " hole $\frac{3}{8}$ " deep where shown on the Side View drawing.

**CRAFT
SHOP**

A napkin holder
with lots of
country charm

GRACEFUL GOOSE

Project Design: Woodworks Unlimited, Ghent, N.Y.

Photograph: Hopkins Associates

Take a gander at this accommodating accent for your kitchen table. It combines two well-loved country symbols—a goose and a heart—into a practical accessory.

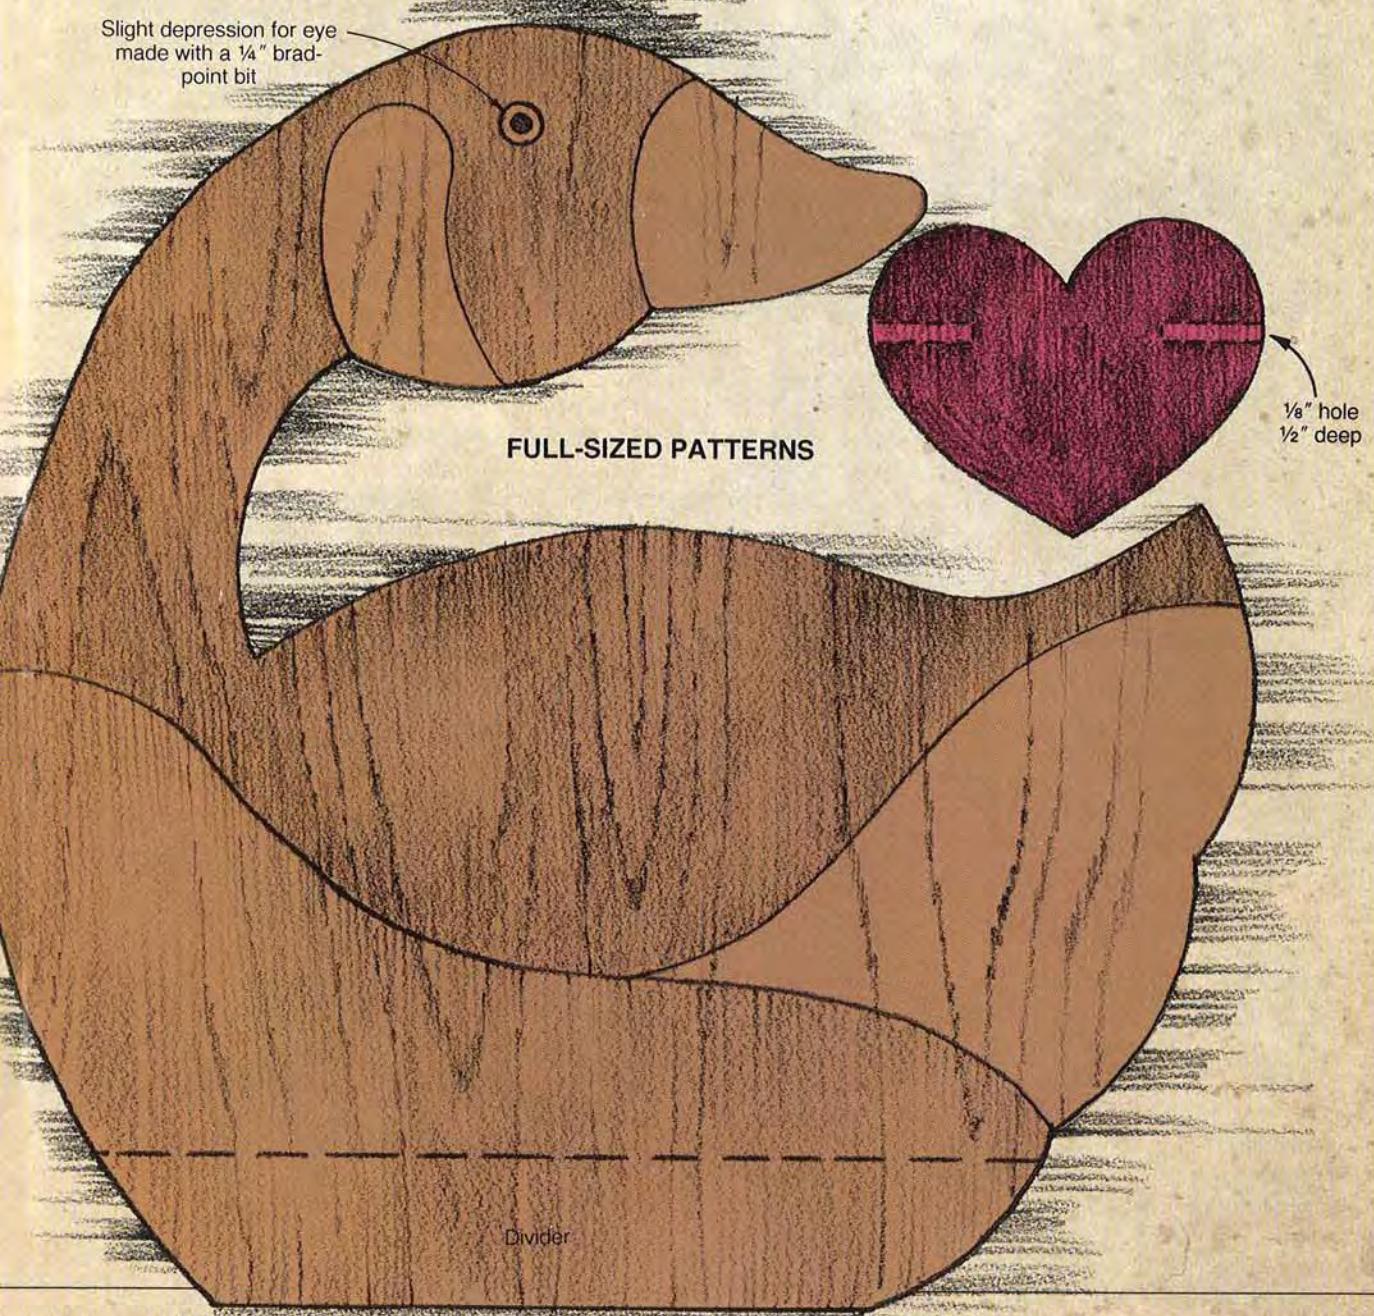

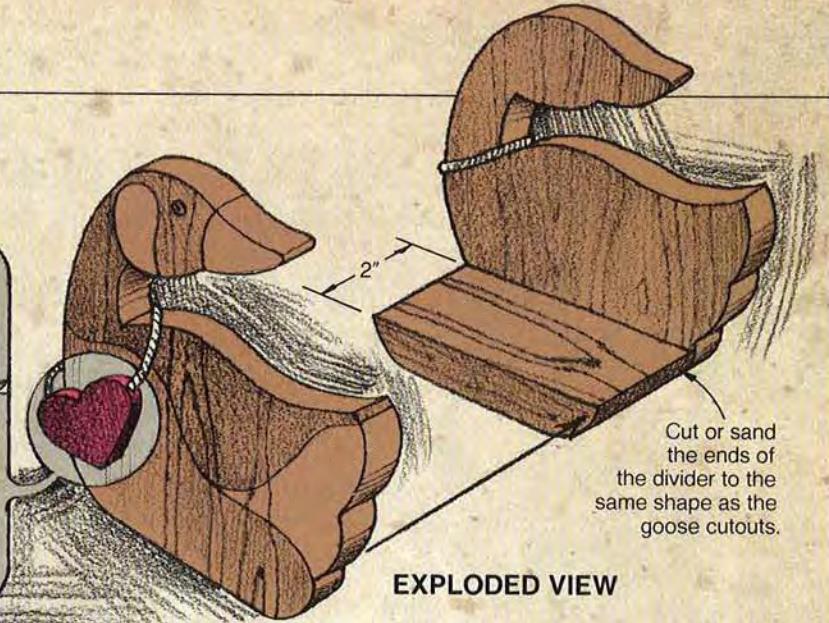

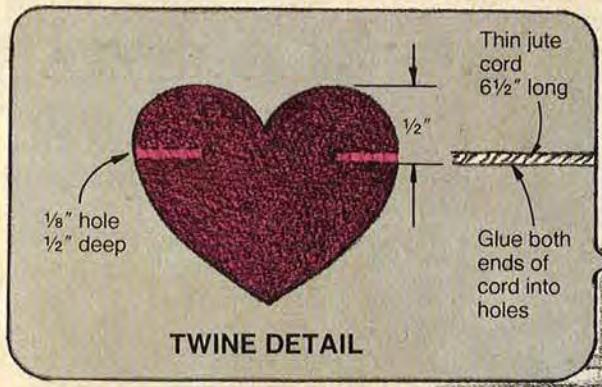

Transfer the full-sized goose pattern on the opposite page onto $\frac{1}{2}$ "-thick stock and the heart pattern onto $\frac{1}{4}$ " stock (we used clear white pine). To keep the neck portion strong, follow the grain direction on the Exploded View drawing when laying out the pieces. With a bandsaw fitted with a $\frac{1}{8}$ " blade or a scrollsaw with a #9 skip-tooth blade, cut out the geese and heart shapes. (Double-faced tape allowed us to stack and cut out the geese and hearts in pairs.) From $\frac{3}{4}$ " stock, cut the bottom of the holder to $2 \times 4\frac{3}{4}$ ". Cut or sand the ends of the divider to the same shape as the goose outline. Then, drill a pair of $\frac{1}{8}$ " holes $\frac{1}{2}$ " deep in each heart where located on the full-sized pattern. Sand the parts.

For the best results, paint the geese before assembly, but mask the areas that will contact the base. (To paint the pieces, we used water-based acrylics and a no. 6 sable brush.) Apply the gray (a mixture of black and white), the black, and finally the white. Paint the hearts red.

To achieve the aged look, lightly sand the edges of each goose and heart after the paint has dried. To further age the project, rub on a brown-colored stain (we used a water-based acrylic) and immediately wipe off most of it. Using a $\frac{1}{4}$ " brad-point bit, form a slight depression for each eye.

Glue the divider between the goose pieces. Cut two pieces of thin jute cord to $6\frac{1}{2}$ " long. Glue the ends of each cord into the holes in the heart. Hang the hearts around each goose neck, and fill the holder with napkins.

CHEERY, CHERRY DOOR

A "Welcome" Addition to Your Home's Entry

We've heard a symphony of door harps over the years, but Robert Kiser's design sounds better than any we've listened to. What's Bob's secret? He hangs the wooden balls on dowels instead of wires or string. See the Buying Guide for our source of pins, music wire, and a clapper assembly.

Plane or resaw cherry to obtain two pieces measuring $\frac{1}{4} \times 5 \times 16"$ for the front and back pieces (A). Using double-faced tape, stick the front and back together face-to-face with the edges and ends flush. Draw a centerline where shown on the Exploded View drawing. With carbon paper, transfer the curved end patterns to the top piece. The finished length of the harp equals $15\frac{3}{8}"$.

Draw a pair of lines between the two end patterns to complete the outline. Refer to the dimensions on the Exploded View drawing and mark the two centerpoints for the heart opening as well as the point at the bottom of the heart. With a bandsaw, cut the taped-together pieces to

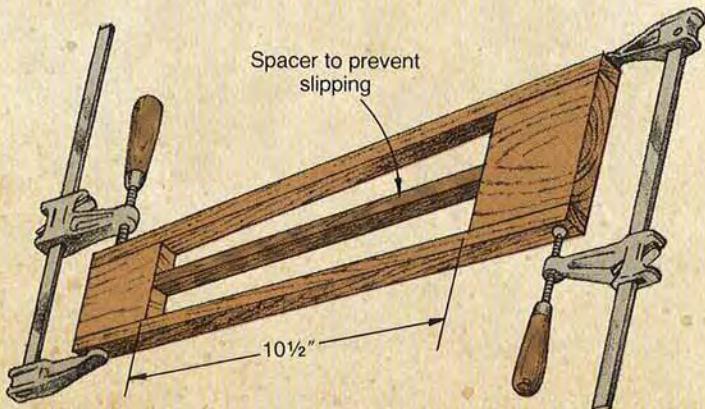

shape, cutting just *outside* the marked line. Separate the pieces and remove the tape. Using a Forstner or a spade bit, bore two 1" holes for the heart-shaped opening. Draw lines from the outside edges of each hole to the heart's point, and finish cutting the heart to shape with a scroll saw. Sand both pieces smooth.

Rip and crosscut the sides (B) to $\frac{1}{2} \times \frac{3}{4} \times 16"$. Using the full-sized patterns as guides, mark and cut the wedge-shaped ends (C, D) to size. With the surfaces flush and a $10\frac{1}{2}$ "-long spacer between the end pieces, glue and clamp the frame pieces (B, C, D) in the configuration shown *below*.

Using the front piece (A) as a template, center it on the frame parts and trace its outline on the frame. Bandsaw the frame to shape, cutting just outside the marked line.

Glue and clamp the front and back pieces to the frame. Later, sand to the marked line for flush edges. Mark the location, and drill the holes for the tuning pins, bridge pins, clapper assembly, and hanging hole.

Rout a $\frac{3}{8}$ " round-over along the top and bottom. Sand and add the finish (we used aerosol lacquer).

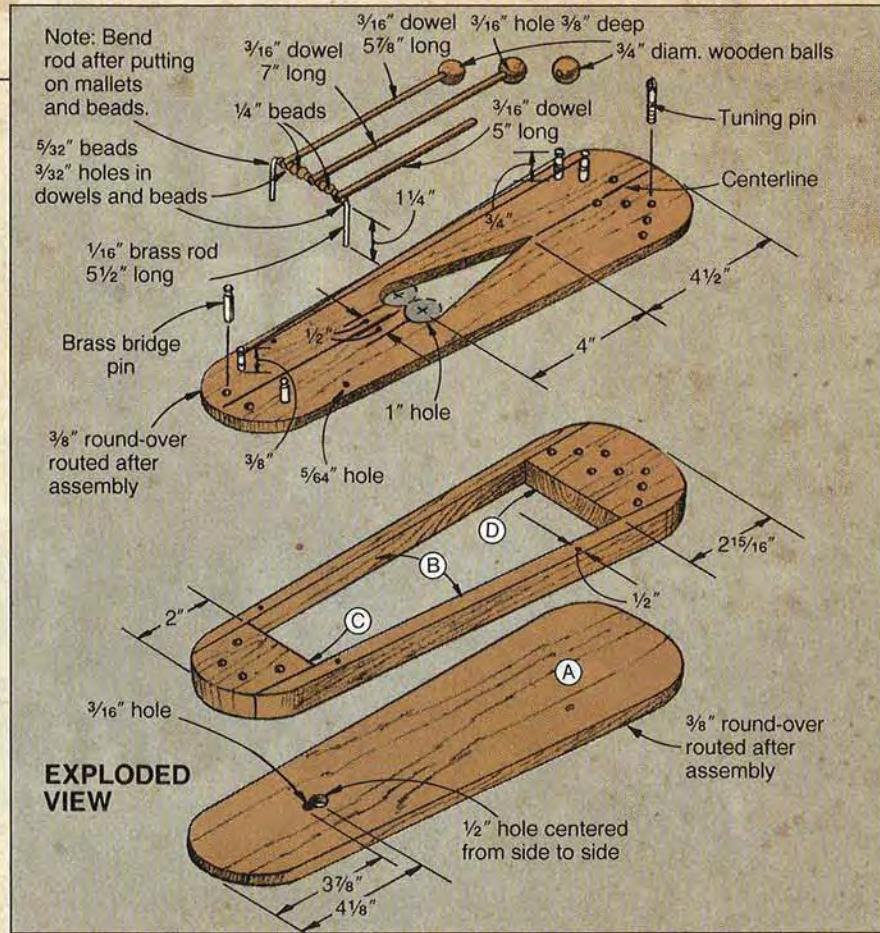

[Print this article](#)

HARP

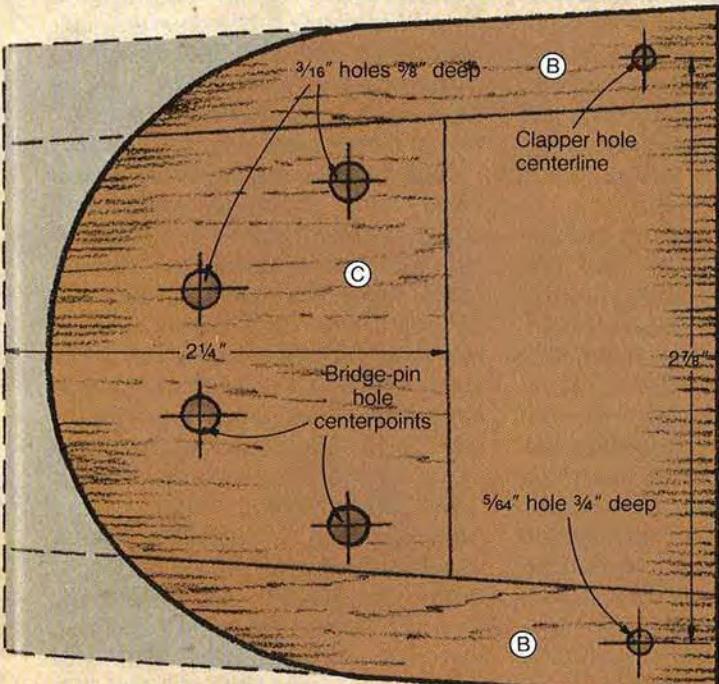

With a mallet, tap the bridge pins into the holes. Tap the tuning pins about $\frac{1}{8}$ " into their mating holes. Use the tuning-pin wrench to thread the pins into the holes. String the wire where shown in the Exploded View drawing. Put two drops of instant glue in each $\frac{5}{64}$ " hole, and adhere the clapper assembly to the harp. Hang the harp on the inside of your door.

Buying Guide

WASHED-UP WOOD

ALONG THE OREGON COAST, CRAFTSMEN LOOK TO THE OCEAN FOR STOCK

Sam sinks into a cozy, clam-shaped easy chair hued from the trunk of a huge cedar tree. He found the wood on the beach.

A giant myrtle tree furnished the bizarrely bleached and buried roots that stand out as one of Phil's prized finds.

When most of us need wood, we march down to our hardwood dealer or lumberyard. Enterprising Oregon woodworkers Phil Clausen and son Sam, though, head for the beach instead.

Winter storms roil the Pacific waters off the Oregon coast, building waves that pound more than 300 miles of beach. Inland, torrential rains of the season swell rivers to their banks. Like waters from wide-open faucets, the floods surge to the ocean, sweeping obstacles before them. The inevitable clash with the incoming tide creates a driftwood delicatessen—one that offers specials every day.

EIGHTEEN YEARS BUILDING, NEVER A PENNY FOR STOCK
To Oregon's beachcombing woodworkers, Phil and Sam Clausen, the lull of a storm signals harvesttime.

The father-and-son team knows that Mother Nature's forces have littered the coastline near their shop with wooden casualties—root balls, branches, planks, entire trees. Free for the taking (it's perfectly legal on Oregon public beaches), the washed-up wood will find new life in their workshop.

"Back in 1964, we had a memorable flood that literally lined the beaches with wood," says Phil. "I've been woodworking full-time 18 years since then, and we're still drawing off that reservoir."

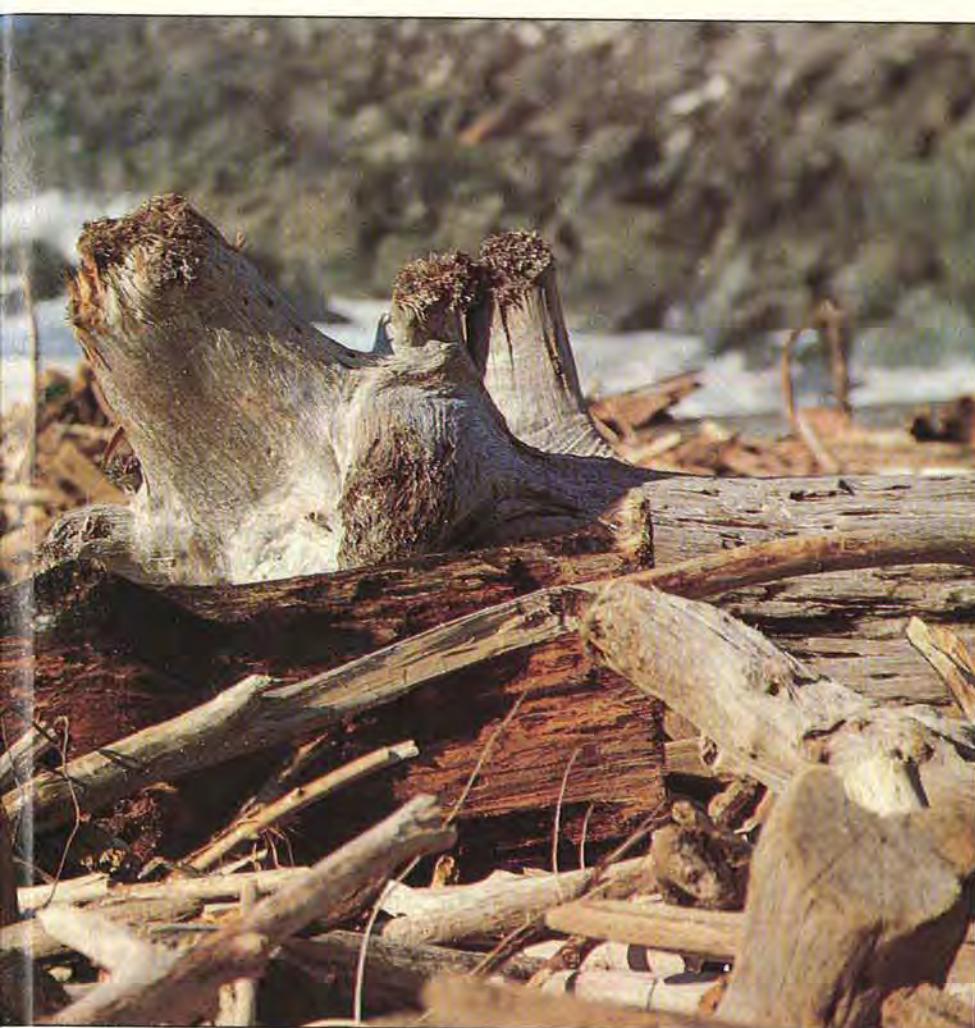

Phil, 62, and Sam, 38, own and operate Clausen Studio in tiny Riverton, on the Coquille River, a short drive from the oceanside towns of Bandon and Coos Bay. Together, they craft rustic and unusual free-form tables, chairs, lamps, and other wood accessories.

In addition to drawing from their beach bequeathal, the Clausens commandeer wood wherever they happen to find it. "Besides working the beach, a little wood comes

down the Coquille River every winter, from the interior, that doesn't make it to the ocean," explains Phil. "We also haul from logging areas on public lands, such as the national forests and Bureau of Land Management parcels.

"From the beach, we get logs and even whole trees: redwood, Douglas fir, white fir, pine, cedar, and cypress," Phil continues. "Sometimes, there'll be maple, myrtle, alder, oak, and yew—every kind of tree that you'd find in the forest. In '64, even big redwoods from Northern California washed up—and I mean trees with 20,000 board feet of wood!"

Occasionally, they pluck a real prize. "A few years ago, Sam found a mahogany log on the beach," says Phil. "I suspect it fell off a ship. Anyway, it had been in tropical water for some time, because it was full of holes bored by shellfish. He had it sawed at the mill. Some of it went to a local woodworker for an interesting-looking hutch."

Where Oregon's Coquille River empties into the ocean at Bandon, cedar, fir, pine, and other woods pile up on the beaches.

WOOD IS WHERE YOU FIND IT

No ocean beaches for driftwood near you? Take heart. Rivers, river-fed lakes, and reservoirs all offer some free-for-the-picking stock. And, one of these natural wood depositories shouldn't be far from wherever you happen to live. Best times of year? Look for wood just after the spring snow melt and runoff. In reservoirs, try during late summer when the water level drops.

What will you find? Remnants of trees native to your area that probably died on the stump and were blown into the river or lake bed. If you live near a major waterway, the washed-up wood you'll find might have originated hundreds of miles away.

Sometimes, a surprise comes only after they work the wood in the shop—like the time the woodworkers found a 3"-diameter, solid piece of vine perfect for a lamp base. Then, they discovered that their treasure was poison oak! "We got a good case of it," Sam recalls, chuckling at the thought.

Hardwood trees, stumps, and burls also find their way into the Clausens' shop via tips from friends. In fact, they acquire some extraordinary wood that way. "A dredging crew was digging out the river bottom for a boat ramp when they brought up a sunken tree. We went over to see the log and discovered that it was myrtle, but somehow the wood had acquired a blue cast during its submergence. I slabbed it up to sell as tabletops."

OCEANSIDE LOGGING ISN'T A PICNIC

The tools and equipment Phil and Sam need to reap their harvest of free wood rivals that of a small log-

ging operation. Four-wheel drive pickups sporting oversized tires overcome traction problems on beach sand and provide pulling power. "We mount a winch above the bed," notes Phil, "and raise the log lengths right into the truck."

To handle 7'- and 8'-diameter trees, such as redwood, Phil wields a chainsaw fitted with a super-sized 60" bar. "The only way to get through those big ones!" he says.

But, even with tools matched to the job, the beachfront loggers tackle a tedious task when they harvest driftwood. That's because sand permeates every piece, and it takes a toll. "Trees from the river bottom will have some sand and pebbles in them," Phil says, "but driftwood is the worst. When there's no bark, the wind blows sand right into the grain. You can't wash it all out or blow it out with a compressor. Even when a log has bark, there'll be sand in the end grain. So, when we cut at the beach we constantly sharpen the chain.

And," he adds, "in the shop, the sand dulls saw blades and bits that we have to replace or resharpen."

Phil and Sam consider the inconvenience of sharpening, plus wear and tear to cutting edges, a small price to pay for the wood they bring home. Because, in all ways, it proves exceptional.

"Except for that one blue-colored myrtle tree dragged from the river, neither salt nor fresh water have much effect on a wood's color," Phil notes. "But, and it seems kind of strange, wood that has been immersed in any kind of water seems to dry faster than green wood, and has greater stability."

There's no difference between sanding, staining, or finishing found wood than wood from the lumberyard, say the woodworkers. "All in all, it's satisfying stock," Phils sums up. "And what beats all is that you just never know what you're going to find."

Written by Peter J. Stephano
Photographs: Mary Schamehorn

Not long ago, Larry Clayton, **WOOD** magazine's editor, stopped by my office and asked me if I had seen a recent advertisement for low-priced Forstner bits. "Can you believe that price—\$89.99 for 16 bits?" Larry asked. "I wonder if they're any good?"

His questions convinced me that the time was right to shed some light on the subject. So, I made a few calls to the major manufacturers and distributors of Forstner bits, all of whom agreed to send me samples. With more than 100 bits in five styles from no fewer than 11 suppliers in hand, I turned the testing over to Jim Boelling, **WOOD** magazine's project builder. After two weeks of tryouts, Jim let me know, in no uncertain terms, how the various samples performed.

The woodworker's survival FORSTNER

FIVE DIFFERENT TYPES OF FLAT-BOTTOM-HOLE BITS TO CHOOSE FROM

Early on in my research, I realized that even though many manufacturers label their products as Forstner bits, few of these tools resemble the bit Benjamin Forstner invented in 1886 for cutting smooth-walled, flat-bottomed holes. The Salem, Oregon, blacksmith would be amazed that manufacturers from around the world still are fiddling with his design more than 100 years later. I uncovered these five variations:

CONVALCO. These bits, made exclusively by Connecticut Valley Manufacturing (CONVALCO) in New Britain, Connecticut,

closely resemble Forstner's original bit. Some similarities include an almost-nonexistent center-point, two continuous rims without spurs, and hand-sharpened lifting cutters.

Tony Garro of CONVALCO told me that only his company machines Forstner bits from solid bar stock. "We don't forge our bits like the imports do," Tony said. He also explained that his bits have more mass near the rim. Like saw blades or any other cutting tool, extra mass near the scoring edge absorbs and dissipates heat.

You can buy these premium-priced bits through the mail from either Woodcraft Supply or directly from the manufacturer. Only CONVALCO supplies Forstner bits in $\frac{1}{16}$ " increments.

Imported Forstner. European and Southeast-Asian manufacturers produce this bit at a relatively low cost

because the notch behind each lifting cutter allows them to machine-grind the cutters. These bits, as well as the following three types, have centerpoints ranging from $\frac{1}{8}$ " to $\frac{1}{4}$ " in length, depending on the diameter of the bit.

Multi-spur. Like the teeth on a sawblade, side-by-side cutting edges along the rim of multi-spur bits aggressively score the walls of the hole. Multiple spurs help keep the rim cool, but also add to the manufacturing cost.

Carbide-tipped. Because they have cutters, center-points, and two scoring spurs made of carbide, these bits last and last, but cost more than any other type.

Single lifter. Made by Vermont American and sold under its name as well as under the Sears brand, these bits have just one rim and lifter. Interestingly, the $\frac{1}{2}$ "-and-smaller sizes were the only bits in our tests with flutes along their shanks for improved chip evacuation.

guide to buying... BITS

WHAT OUR TESTS REVEALED

Style and looks are one thing, but like you, I wanted to know how the various bits performed. So, Jim Boelling and I decided to judge the bits according to the three criteria listed below. You'll find the complete results in the chart at right.

1. Sharpness from the factory

Right out of the package, the bits varied greatly in the sharpness of their lifting cutters and rims. The carbide-tipped and CONVALCO bits had the finest edges, and the Chinese-made bits had visibly rough lifting cutters. These rough edges cut fairly well, but left minute scratches in hole bottoms.

2. Resistance to burning

As the rim and centerpoint of Forstner bits heat up, two things can happen. First, the rim can turn blue (a sign that it has lost temper). Without temper, the softened cutting edge quickly dulls. Also, as shown in the photo below right, an overheated rim will burn the walls of the hole.

To test for resistance to burning, we started with sharp, cool bits, and cut $\frac{1}{2}$ "-deep holes in hard maple with $1\frac{1}{2}$ " bits running at the recommended speed of 250 rpm. Only the CONVALCO, multi-spur, and carbide-tipped bits allowed us to make multiple holes without waiting for the bit to cool considerably between holes.

3. Smoothness of cuts

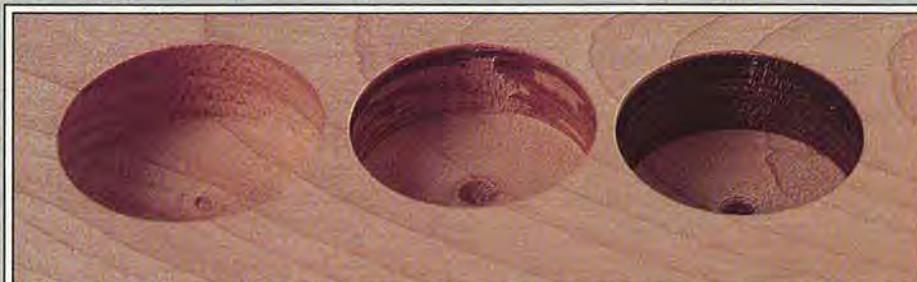

If you intend to use your Forstner bits to make holes with exposed

Continued on page 89

N/A Not available.
 *Similar bits available from AMT.
 **Similar bits available from Grizzly.
 ***In place of rim, these bits have two scoring spurs.

1. (CT) Carbide tipped; (CO) CONVALCO; (MS) Multi-spur; (SL) Single lifter; (IF) Imported Forstner.
 2. (E) Excellent; (G) Good; (F) Fair.
 3. (A) Austria; (C) China; (I) Italy; (T) Taiwan; (US) United States; (WG) West Germany.
 4. Price for $\frac{3}{4}$ " bit unless noted otherwise. (A) $2\frac{1}{8}$ " bit; (B) 1" bit.
 5. # Postage-paid price
 6. (A) 6 sizes from $\frac{3}{8}$ " to 1"; (B) 7 sizes from $\frac{1}{4}$ " to 1"; (C) 16 sizes from $\frac{1}{4}$ " to $2\frac{1}{8}$ "; (D) 8 sizes from $\frac{1}{4}$ " to 3"; (E) 3 sizes ($\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$ "); (F) 13 sizes from $\frac{3}{4}$ " to $3\frac{1}{8}$ "; (G) 4 sizes from $\frac{3}{8}$ " to 1".

We came across the good, the bad, and the ugly of burned walls in our tests. Holes resulted from left: CONVALCO, Chinese-made, and West German-made Forstner bits.

CABINET, CABINET

[Print this article](#)

Clean and simple with a Shaker air about it, our cherry wall cabinet makes a nice addition to most any wall in need of dressing up. You can build it in two evenings and enjoy it for a lifetime.

Note: You'll need some thin stock for this project. You can either resaw or plane thicker stock to size.

Start with the basic case

1 From $\frac{3}{4}$ "-thick cherry, cut the sides (A), fixed shelf (B), and top and bottom (C) to the sizes listed in the Bill of Materials.

2 Mark the locations and cut a $\frac{3}{4}$ " dado $\frac{1}{4}$ " deep on the inside face of each cabinet side. Then, cut or rout a $\frac{3}{8}$ " rabbet $\frac{1}{4}$ " deep along the back inside edge of each cabinet side.

3 Mark the shelf-hole centerpoints and drill $\frac{1}{4}$ " holes $\frac{1}{2}$ " deep on the inside face of the side pieces (40 holes total).

4 After viewing the Chamfer detail for reference, rout a chamfer along the front and side edges of the top and bottom pieces (C).

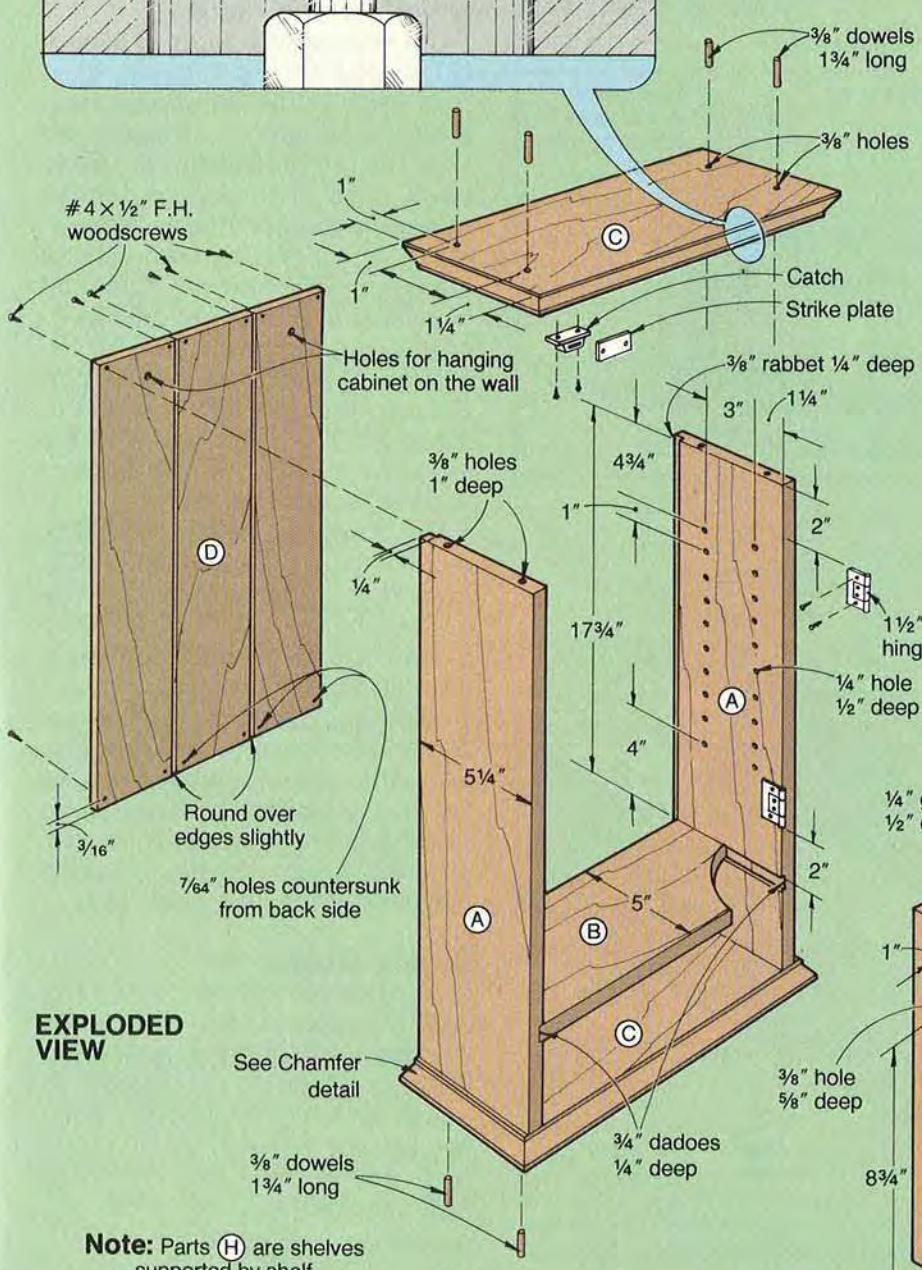

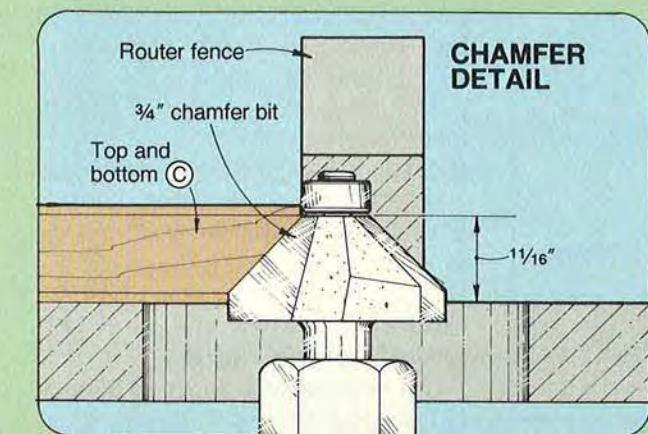

5 Sand the cabinet pieces. Now, dry-clamp the cabinet with the back edges flush; check for square. Mark the dowel-hole centerpoints on the top and bottom pieces, and drill $\frac{3}{8}$ " holes through the top and bottom and 1" into the ends of the side pieces. Remove the clamps.

6 Cut eight $\frac{3}{8}$ "-diameter dowels $1\frac{3}{4}$ " long (we used cherry dowel stock; see the Buying Guide for our source). Next, glue, dowel, and clamp the cabinet assembly (A, B, C), checking for square. Wipe off excess glue with a damp cloth. Trim and sand the protruding end of each dowel flush with the cabinet surface.

7 Mark the location and fasten the hinges to the cabinet side. (See the Buying Guide for our source of hardware.)

Continued

ON THE WALL

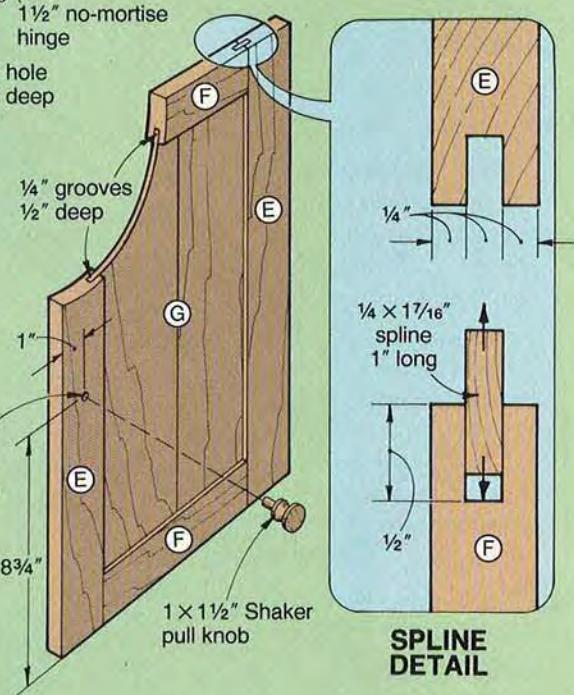

Note: Parts H are shelves supported by shelf clips and are not shown.

Part	Finished Size			Mfr.	Qty.
	T	W	L		
CABINET					
A sides	3/4"	5 1/4"	22"	C	2

C top and bottom	3/4"	5 7/8"	14 1/4"	C	2
D back	1/4"	4 1/16"	22 3/4"	C	3
DOOR					
E stiles	3/4"	11 5/16"	17 5/8"	C	2
F rails	3/4"	11 5/16"	7 1/2"	C	2
G panel	1/4"	8 3/8"	14 9/16"	EC	1
SHELVES AND DRAWER					
H shelves	1/2"	4 1/8"	11 1/4"	C	2
I front	3/4"	3 3/8"	11 3/8"	C	1
J back	1/2"	3 3/8"	10 7/8"	C	1
K sides	1/2"	3 3/8"	4 9/16"	C	2
L bottom	1/4"	4 1/8"	10 7/8"	C	1

Material Key: C-cherry, EC-edge-joined cherry

Supplies: #4 x 1/2" flathead wood screws, 3/8" dowel stock.

CABINET

It's time to add the back

1 Cut three pieces of $\frac{1}{4}$ "-thick cherry to $4\frac{1}{16}$ " wide by $22\frac{3}{4}$ " long for the back panel (D). Sand a slight round-over on the front edges of each piece. (The drawing at right shows the method we use to resaw thicker stock to size.)

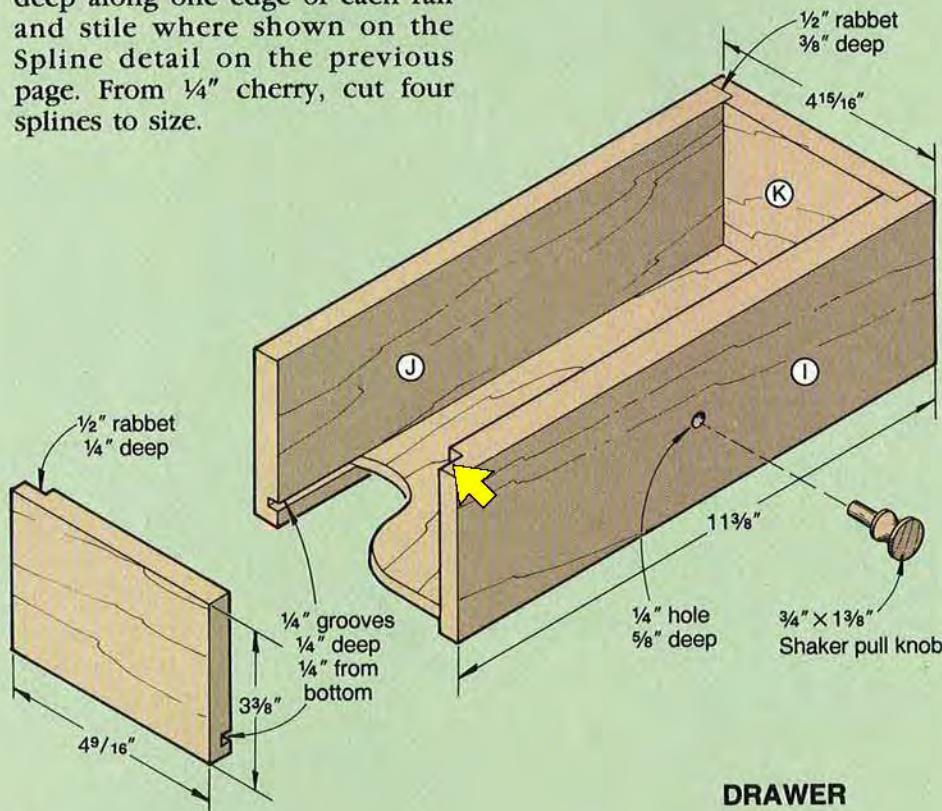

2 Rout a $\frac{3}{8}$ " rabbet $\frac{1}{4}$ " deep along the inside edge of the top and bottom pieces (C) to match the rabbet previously cut in the side pieces. Use a sharp chisel to square the corners where the rabbets meet.

3 Lay the cabinet facedown. Position the three back pieces (D) in the rabbeted opening. Drill and countersink holes in the back-panel pieces to the sizes shown on the Exploded View drawing.

The door comes next

1 Cut the door stiles (E) and rails (F) to size. Then, cut two pieces of cherry to $4\frac{1}{2} \times 15$ ". Plane or resaw the pieces to $\frac{1}{4}$ " thick for the door panel (G). Glue and clamp the pieces edge to edge with surfaces and ends flush.

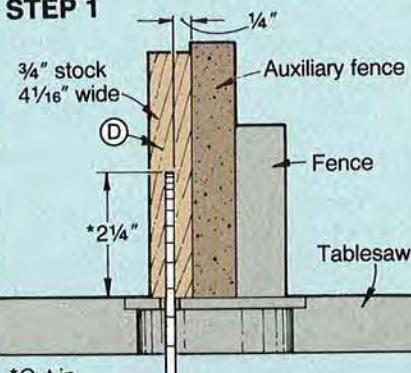

2 Cut or rout a $\frac{1}{4}$ " groove $\frac{1}{2}$ " deep along one edge of each rail and stile where shown on the Spline detail on the previous page. From $\frac{1}{4}$ " cherry, cut four splines to size.

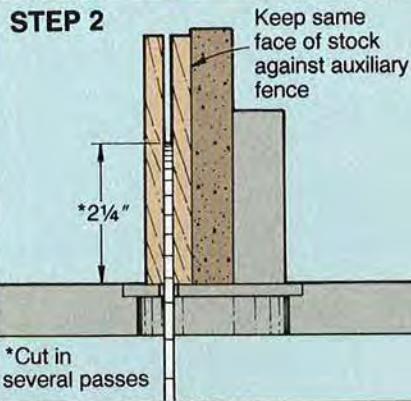

DRAWER

HOW TO RESAW

STEP 1

STEP 2

3 Test-fit the door pieces; the panel should be slightly undersized about $\frac{1}{16}$ " in each direction to allow it to expand without splitting the assembled door. Then, glue and clamp the door. Allow the panel to float inside the frame *without* glue.

4 Mark the centerpoint, and drill a hole for the Shaker pull knob.

5 Cut the adjustable shelves (H) to size.

Add the drawer and then the finish

1 Cut the drawer front (I), back (J), sides (K), and bottom (L) to sizes listed in the Bill of Materials.

2 Cut a $\frac{1}{4}$ " groove $\frac{1}{4}$ " deep $\frac{1}{4}$ " from the bottom edge of the front, back, and side pieces where shown in the drawing at left.

3 Cut $\frac{1}{2}$ " rabbets on both ends of the front piece and the back end of each side piece (see the Drawer drawing for particulars).

4 Draw diagonal lines from corner to corner to find the center of the drawer front, then drill the mounting hole for the Shaker knob in the drawer front.

5 Dry-clamp the pieces and check the fit of the drawer in the opening. Then, glue and clamp the drawer parts.

6 Drill a pair of mounting holes through the cabinet back.

7 Sand the cabinet, back, door, and drawer. Apply the finish to the cabinet and knobs (we left the cherry natural and brushed on several coats of polyurethane). Add the knobs. Finally, add the magnetic catch and strike plate.

Buying Guide

• Hardware. One $\frac{3}{4}$ "-diam. and one 1"-diam. Shaker pull knob, one pair of $1\frac{1}{2}$ "-long no-mortise hinges, magnetic catch, two 8" pieces of $\frac{3}{8}$ " cherry dowel. Cabinet kit no. 101WD, \$9.95 (U.S.) ppd. Cherry Tree Toys, P.O. Box 369, Belmont, OH 43718.

WOOD® Magazine announces: 1991 BUILD-A-TOY™

**Our Third Annual Juried Contest
to benefit deserving kids through Toys-for-Tots**

ENTRY DEADLINE: FEBRUARY 1, 1991

Great prizes for every skill level! New Judging Categories!

Prizes for Original Designs and Built from Plans!

Holiday exhibition at the Museum of American Folk Art!

Enter by November 1, 1990 to be eligible for Museum exhibit.

We're proud to invite wood-workers of every age and skill level to participate in the Third Annual WOOD Magazine BUILD-A-TOY Juried Contest.

This year, we've expanded the competition into new areas. Special citations will be awarded to wood-workers who build toys from plans as well as original design entries. There are also several new judging categories.

We've added more valuable prizes contributed by leading WOOD advertisers. Some winning toys will be chosen for editorial features in future issues of WOOD.

There's even an exhibition of winners scheduled for the 1990 holiday season at the Museum of American Folk Art in New York City. (Toys received by November 1, 1990 will be eligible for display in the Museum's Christmas Tree exhibition.)

BUILD-A-TOY is the best way we know of for woodworkers to get the

COMPETITION PRIZES AND CATEGORIES

STUDENT (K-12):	HOME HOBBYIST:	PROFESSIONAL:
DESIGN: These 15 categories are open to original design entries only.

WOOD® Magazine's 1991 BUILD-A-TOY Contest

There is no limit to the number of entries. Please provide the following information for each toy submitted.

My entry is: Original Design* Built from plans

My skill level is: Student Home Hobbyist Professional

Name _____

Address _____

City _____ State _____ ZIP _____

Daytime Phone (_____) _____

*For Original Design entries: I certify that I have designed and built this toy myself. Should my entry win, I agree to cooperate with WOOD Magazine to supply builder's notes and a bill of materials for publication.

Signature _____ Date _____

Send toys to: 1991 BUILD-A-TOY, WOOD Magazine,
1912 Grand Avenue, Des Moines IA 50309

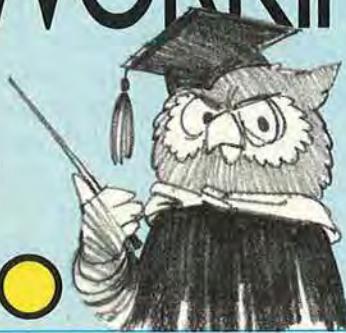

recognition they deserve for great craftsmanship. We'd like as many entries as we can get.

That's because WOOD Magazine's BUILD-A-TOY Competition is also the contest with the biggest heart. The toys you submit will be contributed to the TOYS-FOR-TOTS program of the U.S. Marine Corps Reserve.

Help make some deserving kids happy this Christmas.

**1991 BUILD-A-TOY
ENTRY DEADLINE:
FEBRUARY 1, 1991.**

TEST YOUR WOODWORKING I.Q.

FROM TREE TO BOARD

1. What size is a board foot?
A. $1 \times 6 \times 18"$ B. $1 \times 12 \times 12"$
C. $2 \times 6 \times 12"$ D. $12 \times 12 \times 12"$
2. What's the greatest difference between red and white oak?
A. Red oak is a different color
B. White oak makes a durable outdoor project
C. White oak costs less
3. If you followed the old adage about how long it takes to air-dry green wood, how long would it take to dry a piece $3\frac{1}{2}$ " thick?
A. 4 years B. 6 months
C. $2\frac{1}{2}$ years
4. After seasoning, will a board be narrower or shorter than when it was green?
A. Shorter B. Neither
C. Both D. Narrower

WORK THAT WOOD

5. Which of the following can be done on a bandsaw?
A. Ripping B. Cutting circles
C. Resawing D. Mitering
6. When ripping on the table-saw, how much blade should extend above the wood?
A. $1\frac{1}{8}"$ B. The teeth C. $\frac{3}{8}"$
D. Double wood thickness
7. What is the shortest board you can safely run through a jointer?
A. One half the bed width
B. 24" C. 10" D. 12"
8. Hardwood should be drilled at a faster speed than softwood.
A. True B. False

PUTTING PROJECTS TOGETHER

9. What is the strongest woodworking joint?
A. Butt B. Shouldered butt
C. Tongue-and-groove
D. Mortise-and-tenon
10. Veneering became popular in the Machine Age of the 1800s.
A. True B. False
11. When is a dado a groove?
A. When it runs with the grain
B. Only across grain
C. At the end of a board
D. On the edge of a board
12. When someone mentions aliphatic-resin glue, what are they talking about?
A. Glue warmed in a pot
B. Yellow glue
C. Contact cement
13. What can slow-cure epoxy do that 5-minute epoxy can't?
A. Be sanded B. Resist water
C. Fall out D. Accept paint

Taking tests back in high-school shop class sure wasn't much fun. Now, though, only your enjoyment is at stake. Challenge your know-how, and then check your answers against those at the bottom of the page.

Print this article

HOW DID YOU DO?

16-18 Shop wizard

11-15 A cut above

7-10 Run of the mill

less than 7 Hill of sawdust

THE FINAL TOUCH

14. What hand tool did the finish sander replace?
A. Sanding block B. Plane
C. Cabinet scraper
15. Which of the following finishing materials comes from a tree?
A. Linseed oil B. Tung oil
C. Aniline dye D. Lacquer
16. For outdoor use, a clear finish should contain what?
A. Tint color B. Varnish
C. Pigment D. UV inhibitors
17. What is "fish eye"?
A. Smelly varnish B. A blemish
C. Wood figure D. Router bit
18. When sanding, how do you know when to switch to the next finer grit?
A. It no longer removes wood
B. You run out
C. When it feels smooth
D. After five minutes

18. (A) No kidding!
17. (B) Craters occur in lacquer when there are traces of silicone on the wood.
16. (D) Ultraviolet light (UV) penetrates the wood and discolors it.
15. (B) Seeds of the tung tree.
14. (C) Cabinet scrapers were used to finely smooth wood.
13. (B) It holds up better to moisture than any other glide.
12. (A) The old reliable—creamy yellow woodworker's glue.
11. (A) A dado goes across the grain.
10. (B) Veneering was popular in ancient Egypt to conserve precious wood.
9. (D) Slower speeds avoid burning.
8. (B) Slower speeds of the amount as minimum.
7. (D) For safety's sake, regard 12°.
6. (B) To remove sawdust, the teeth need only to clear the wood.
5. (A,B,C,D) A versatile tool, and thickness.
4. (D) Wood shrinks only in width and thickness.
3. (C) Dry green wood two years for the first 1", then one year for the next 1".
2. (B) Try putting red oak outside for a few years.
1. (A,B,C) Usually $1 \times 12 \times 12"$, but other combinations work.

Refinishing School

Introducing
REFINISHING FURNITURE,
the instructive new how-to video from
Better Homes and Gardens®.

Nothing could be a better reflection on you — than your ability to refinish furniture you thought was all but finished.

Now you'll polish these skills to a fine luster with **REFINISHING FURNITURE**, the inspiring new home video from Better Homes and Gardens® magazine.

Refinishing, from the beginning

Even if you've had no experience restoring or repairing furniture, **REFINISHING FURNITURE** will soon have you rescuing potential heirlooms from the junk pile.

You'll see close up how to revitalize finishes when they are still usable, and repair scratches, water spots, dents — even burns and gouges!

Because it's on video tape, you can replay any section

as often as you need to. And you can actually see a technique demonstrated with your own eyes, to pick up on important subtleties that words sometimes don't convey.

Stripping made easy

In **REFINISHING FURNITURE**, you'll see, in easy-to-follow close-ups, how to strip old finishes. You'll discover how the pros handle bleaching, restaining, filling, and sealing.

You'll find out how to choose and apply the all important finish coat. And you'll learn how to do professional-calibre oil-and-abrasive polishing.

So if you'd like to master the art of refinishing, the place to start is **REFINISHING FURNITURE**. Order your copy now!

We need people who can see the forest for the trees.

Air pollution. Acid rain. Gypsy moth infestation. Global warming. The stress and damage experienced by America's forests represents a serious part of our growing environmental crisis. And these problems affect everyone—from people who make their living in forest-related industries to people who use wood products and enjoy outdoor recreation.

What can you do to help? Plenty! Join other Americans

across the country in protecting our existing forests and planting new acreage. It's all part of Global ReLeaf, our national campaign to help reverse the trends of our worldwide environmental crisis. And, we need people who really do understand the value of these essential and threatened resources.

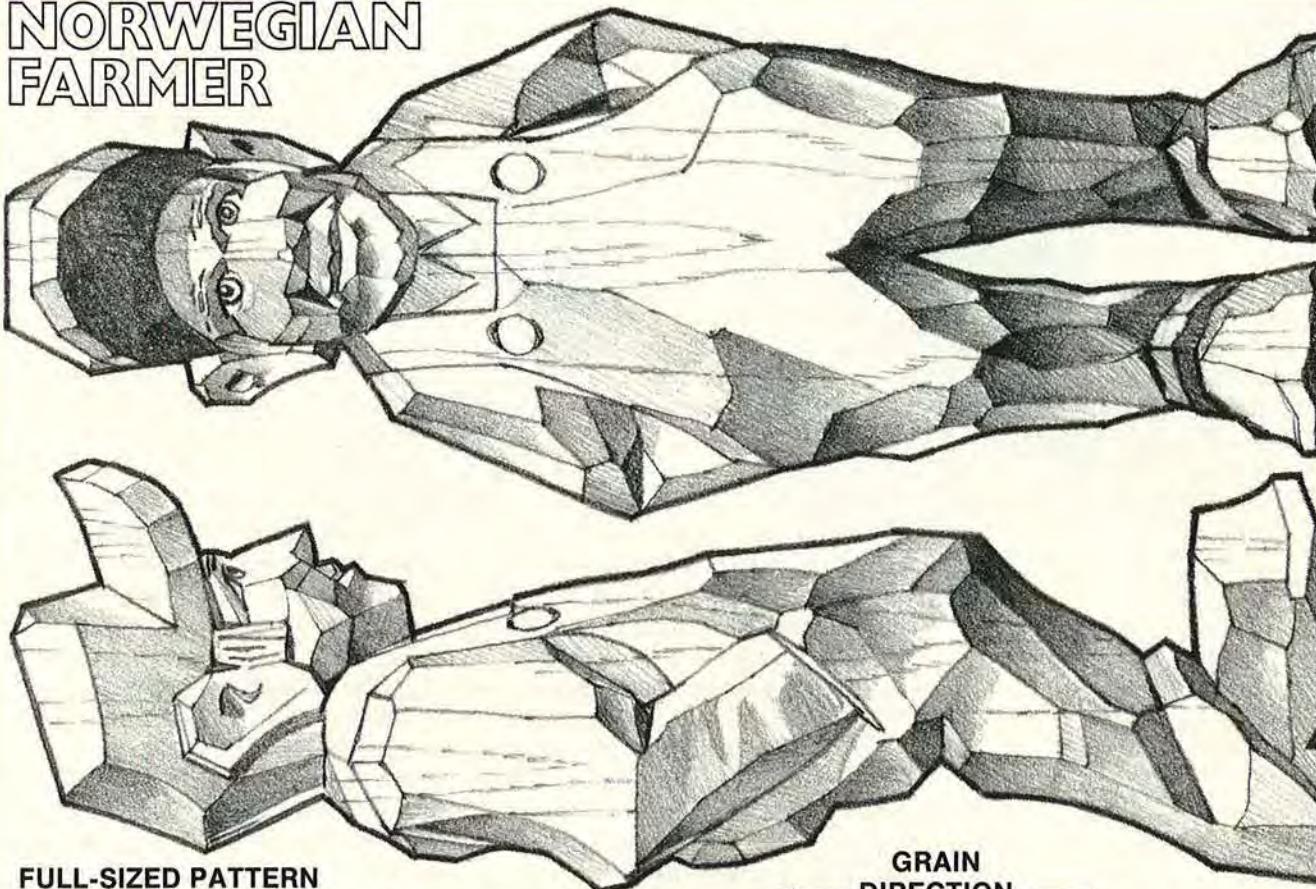

Can Global ReLeaf make a difference? Yes. But not without

your support. For more information on how you can help, write Global ReLeaf, American Forestry Association, P.O. Box 2000, Dept. GR3, Washington, DC 20013.

**GLOBAL
RELEAF**

You can make a world of difference.

What's a woodworker to do?

Although I want to make many of the toys and other items you publish in your interesting magazine, I am dissuaded from doing so because my shop tools are limited.

I have a handsaw, circular saw, and sabersaw. I have a hand plane, a belt sander, and an orbital sander. I have a $\frac{3}{8}$ " electric drill and a cordless screwdriver. But I don't own a lathe, drill press, bandsaw or scrollsaw, so the making of toy wheels and such is left to my sabersaw and ingenuity.

Is there any way you could show more projects that don't require such expensive shop equipment?

—Phil Gabler, Deerfield Beach, Fla.

Phil, every woodworker in our reading audience either has walked in your shoes or is walking in them right now. And for this very reason, in this issue of

WOOD, we have introduced the new, six-page Craftshop section (see pages 64-69). Now, woodworkers with little time and/or a limited number tools can come away with three great, easy-to-do projects.

We work to include buying guides in many of our project write-ups that tell readers where to buy thin stock, toy wheels, and other items that require special machining. Just look through past issues for some of our sources, and then write to these mail-order houses for their catalogs. You'll be amazed at how much machining you can avoid by going this route.

Finally, as you continue to grow in your hobby, you'll want to invest in a few more tools to expand your woodworking horizons. Surveys tell us most of our readers own routers, and/or tablesaws.

Do all tablesaws have tilting arbors?

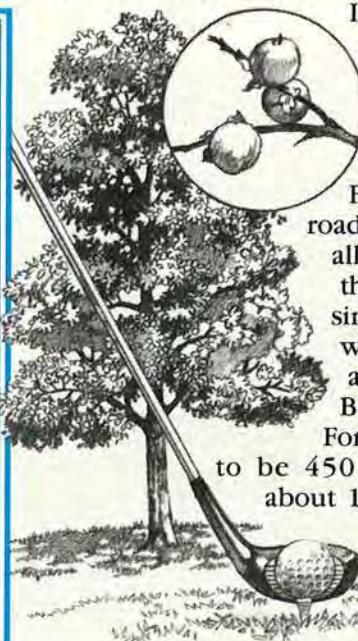

We've had a running joke among a group of amateur woodworkers at work. We've all seen advertisements for tilting-arbor tablesaws. What we want to know is aren't most saws tilting arbor, but only some advertised that way? We've looked through industrial-product manuals and dictionaries, but can't find a good definition of what constitutes "tilting arbor."

—Michael Miller, West Allis, Wis.

It's a rare tablesaw sold today for the home woodworker's market that doesn't have a tilting arbor, Mike. In practice, the motor—and therefore the sawblade arbor—tilts when you turn the crank. This has become so common that many tablesaw ads no longer mention this feature.

A truckful of American ebony

I live in the north Georgia mountains where the white pine trees have become infested with pine beetles. To curb this situation, the Forest Service is cutting roads into the wilderness to allow timber men to cut the infested trees. A persimmon tree stood in the way of one of these roads and had to be cut down. Because of its size, the Forest Service estimated it to be 450 years old. I acquired about 120 board feet of lumber from this tree, with some pieces 10" wide. What might I use it for?

—Tom Jervis
Blue Ridge, Ga.

You now own some mighty nice hardwood, Tom. As we told WOOD readers in an August 1986 "Wood Anecdote," persimmon is North America's only ebony. Because it's dense, hard, and shock resistant, most persimmon becomes the heads of golf clubs. But, you can work the wood into anything that must take abuse—tabletops come to mind.

ASK WOOD

Continued from page 85

Original sin

I'm confused. I've been browsing through magazines other than the best two—WOOD® and Weekend Woodworking Projects®—and have seen projects that are dead ringers for some of yours, save for a few modifications....I understand that two different people might have the same idea at the same time, but I thought that whoever was first owned the idea. Could you explain the legal aspects of this?

—Sam Johnson, Barnwell, SC

Sam, in addition to the project designs we develop from scratch at WOOD, you'll find many designs in the magazine attributed to outside designers. When working with these folks, we have them sign a non-exclusive, unlimited copyright license (your basic legal agreement) that cites them as licensor of the project design. They

give us permission "to print, publish, display, perform, reproduce, and use in all forms, works and derivative works" the purchased project design.

Our agreement says that the licensor "warrants [that the project design] is original" and "previously unpublished."

We also verbally ask project designers if they indeed originated the design. When they tell us "yes," then, unless we have conflicting information, we take them at their word. That's not to say that we haven't been duped a time or two.

If, on the other hand, a design leaves us suspicious, then we immediately drop the project. And even when we buy an original design, we often improve on the construction, safety, and design of the project—in effect, adding our own personal thumbprint.

Working thin

I would like to see drawings for inlays in marquetry, parquetry, and veneering in future issues of WOOD magazine. Could you consider designs for seashells, horns of plenty, and geometric shapes?

—Earl Glass, Cabool, MO.

Earl, though we do not specialize in the subjects you mention,

we have covered the

Marquetry

Society of

America (MSA)

in issue 7, page 34, and featured a handsome marquetry project in issue 17, pages 74-77.

Incidentally, to contact the MSA, write: Marquetry Society of America, Inc., Dept. W, P.O. Box 224, Lindenhurst, NY 11757. ♣

Blade-changing features set apart this inexpensive scrollsaw during tests in the **WOOD®** magazine shop.

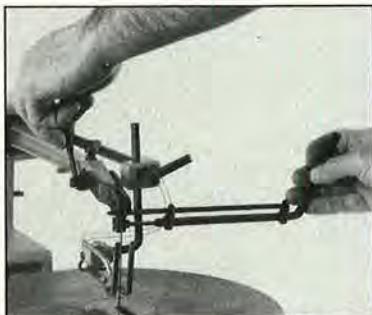

DELTA'S NEW SUB-\$200 MODEL 40-560

We've always liked the hassle-free blade changes on Delta's best 18" scrollsaw—the electronic variable speed model 40-601. So, when we heard that Delta had built the same blade-changing system into a scrollsaw selling for under \$200, we just had to try it out. As you'll see, we weren't disappointed.

What sets this scrollsaw apart

At first glance, Delta's new model 40-560 scrollsaw looks a lot like other inexpensive scrollsaws also made in Taiwan. The 16"-capacity machine has constant-tension parallel arms, a heavy cast-iron base and 11¾"-diameter table, and a two-speed, ½-hp motor that runs at 850 or 1,790 cutting strokes per minute. However, a closer look reveals several exclusive features.

The 40-560 doesn't require you to remove the blade clamps when changing blades. With Delta's Quickset blade-changing system, you simply flip forward a tension-release lever located near the front of the top arm and insert a special wrench into the clamp assembly as shown at right. With one turn of the wrench, you release the blade from either the top or bottom clamps. To replace the blade, just slip it into the top or bottom clamp and secure it with the wrench. To reset the blade tension, you only have to flip backward the tension lever.

This scrollsaw also has a smartly designed blade guard/hold-down. The sturdy assembly pivots and adjusts up, down, and sideways.

What we discovered in our tests

The Quickset blade-changing system made the 40-560 scrollsaw a joy to use. Blade tensioning was a snap, and the blower cleared debris well. The level of vibration was acceptable with the machine securely mounted to a work surface.

FORSTNER BITS

Continued from page 73

walls and bottoms, then only the bits with *excellent* ratings in this area will do. With the others, you'll wind up doing a lot of difficult sanding.

The CONVALCO bits cut the smoothest and flattest bottoms of any of the Forstner bits largely because of their finely ground cutters and minuscule centerpoints. However, without a centerpoint to serve as a pilot, the CONVALCO bits had a tendency to wander across the surface of any workpiece not securely clamped in place on a drill-press table.

Ready to buy?

With the testing completed, I asked Jim to select his favorite bits in three price ranges. The following picks include a few of Jim's comments:

Low price: "For the money, the Chinese-made Forstners performed well, and I recommend them for the woodworker who has only occasional need for a Forstner bit. If you use Forstner bits all the time, however, it will be worth your money to invest in a higher-quality set. For smaller holes, especially pocket holes, Vermont American's $\frac{1}{2}$ "-and-smaller bits really impressed me."

Medium price: "The Austrian-made Forstners seemed to be of consistent quality from importer to importer. As long as I didn't push them too hard, their rims resisted burning fairly well. Of the various brands, the Irwin bits performed best. I just wish they were available in more than four sizes."

High price: "If you make heavy use of a Forstner bit, buy the multi-spurs. If you need flat-as-can-be holes, put your money into CONVALCO bits."

When It Comes To Home Projects, If You've Got The Will

We've Got The Way.

BEAUTIFY YOUR HOME, INSIDE AND OUT

Have you dreamed of transforming your basic backyard into a restful retreat complete with deck and gazebo? How about revamping the kitchen?

Would you like to create a hobby room in the attic? Remodel the basement, add new lighting along your walks or make your closets clutter-free?

If you find satisfaction in projects like these, then take a look at DO IT YOURSELF Magazine.

We'll help you fix it up. Build it on. Organize. Refinish. DO IT YOURSELF gives you loads of ideas for simply improving your living space with affordable, fun projects.

STEP-BY-STEP HELP

It's easy to tackle big projects like building that dream kitchen ... country bath ... or stylish portico. You get everything you need for successful

completion, from clear-cut directions to advice on materials and finishes! And if you prefer to work from plans, we'll tell you how to order.

QUICK AND EASY PROJECTS

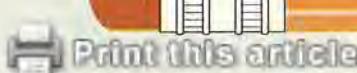

Try your hand at building a flip table or playhouse furniture. From recaning a chair to stenciling a floorcloth -- you'll learn lots of techniques to add your personal touch to every nook and cranny of your home.

BUYER'S MARKET

Plus our Buyer's Market section will introduce you to new products. We'll tell you where to find everything from kit furniture to tools to innovative flooring!

So no matter if you're a beginner or pro -- if you've got the ambition, DO IT YOURSELF can help you with your next undertaking!

Worth writing for...

You can get useful ideas and product information by mail. Use the coupon in this section to order your choice of literature listed below. Each company mails the catalogs or information directly to you.

SHOP ACCESSORIES

PARAGAUGE—NOW ANYONE CAN CUT WOOD ACCURATE TO WITHIN 10/1000 INCH—ParaGauge was developed to provide the woodworker a perfectly parallel measurement quickly and accurately to help alleviate the tedious and sometimes inaccurate task of setting a rip fence. ParaGauge accurately measures distances up to 18 in.

length between the saw blade and rip fence and up to 2.5 in. in depth without resetting or relocating the gauge. Para Gauge is completely portable and can be used on just about any tool requiring a parallel measurement. ACCUSET TOOL CO. INC. 25c. Circle No. 1205.

WOOD MOISTURE METER—End wood warping nightmares with a high quality precision instrument from Electrophysics. Avoid damage and deformation; eliminate stains, decay, mould, and failed joints. Eight models to choose from in the MT Series of wood moisture meters designed and made in Canada. For moisture contents from 3% to 60%. Accessory probes and custom services available. A wood moisture meter is an essential tool for the home hobbyist, serious enthusiast, professional woodworker, commercial kiln or sawmill operator, wood carver, and everyone who works with wood. Free catalog gives complete information. ELECTROPHYSICS. Free. Circle No. 1230.

RIPSTRATE SAVES FINGERS—for table saw and radial arm saw users. Brochure describes the RIPSTRATE and shows how it gives straighter cuts, speeds the work, prevents kickbacks, and keeps hands away from the blade. FISHER HILL PRODUCTS. 25c. Circle No. 1235.

EASY DOES IT—with HTC'S power tool accessories. Discover many unique items, designed only with you, the dedicated woodworker, in mind. Make your machinery safer, increase the working area of your shop and accomplish nearly impossible tasks easily, quickly, accurately. Full-line catalog and price list. HTC PRODUCTS, INC. Free. Circle No. 1245.

BUY YOUR SANDING BELTS DIRECT FROM THE MANUFACTURER—Industrial Abrasives is the company that gives you 12 free belts with every dozen ordered. But, sanding belts are not the only product we have to offer. In our catalog you will find many specialty items not readily available in your hardware store. Price of catalog refunded with first order. INDUSTRIAL ABRASIVES CO. \$1.00. Circle No. 1248.

WOOD MOISTURE METER—Avoid moisture problems such as cracking, warping, splitting, delamination etc. by using a moisture meter, as described in the latest brochure. Moisture Meter Mini-Ligno is designed for serious hobbyists and woodworkers. Attachments for depth measurements and remote reading during air and kiln drying are available. Available Moisture Range 6-20%, 6-36% or 4-30%, 4-60%. Catalog describes complete line of moisture meters. LIGNOMAT USA, LTD. Free. Circle No. 1250.

ROUTER SPEED CONTROL—Reduces speed electronically without reducing torque. Route at the speed that gives best results with the wood and bit you are using. Speed adjustable from full speed to 0 RPM. Less tear out—stops burning—less wear on bits—easy to use. Send today for information. MLCS LTD. Free. Circle No. 1251.

WHOLESALE SANDPAPER, BELTS, SHEETS, CLOTH AND PAPER DISCS—for orbital sanders, flexible sanding blocks, pads, tack cloths, pressure sensitive adhesive, wipers, dust mask—Super Grit offers its quality abrasive and refinishing products at wholesale prices directly to the consumer. Try our extra strength hot melt glue sticks for wood. \$25 minimum order, prompt free UPS shipment to most areas. Catalog/Price List. RED HILL CORP. 50c. Circle No. 1267.

LABOR-EFFICIENT, COST EFFECTIVE TRIMTRAMP—Instantly converts your handheld circular saw into a precision miter and cross-cut saw table that provides unspotted cuts of cabinet maker quality by allowing you to pull the saw backwards through the work. Fixed fences provide perfect 90° picture frame quality miter joints and compound miters, everytime. Also cuts variable angles and cross-cuts up to 15° wide. Send for free brochure. TRIMTRAMP LTD. Free. Circle No. 1280.

WEDGE INNOVATIONS' SmartLevel®—Digital electronic carpenter's level measures all angles with up to 1/10 degree accuracy. Automatically calculates percent of slope and pitch (inches of rise per foot of run), and can be recalibrated into perfect balance with the push of a button. Helps you achieve exact measurements and professional quality with the minimum effort. WEDGE INNOVATIONS. Free. Circle No. 1293.

BITS, BLADES, CUTTING TOOLS

SUPER-SMOOTH, EXTRA-DURABLE, CARBIDE-TIPPED CIRCULAR SAW BLADES—Get a smooth-as-sanded surface with our all-purpose 40-tooth Woodworker Blade. You will be able to rip and cross-cut 1-2 in. rock hards and soft woods with an unbelievably smooth finish. You will also be able to cross-cut oak and birch ply-veneers with no bottom splinters. Send today for our information pack. FORREST MFG. CO., INC. \$1.00. Circle No. 1322.

PRODUCTION QUALITY CARBIDE TIPPED ROUTER BITS—MLCS Ltd. offers a full line of professional production quality carbide tipped router bits at 50-70% lower than retail prices. We sell through the mail and only direct to craftsmen. Send today for catalog. MLCS LTD. Free. Circle No. 1350.

SAW BLADE VALUES—Olson Saw's unique "furniture band" is specifically designed to provide fast, smooth cuts in all types of wood. Included in Olson's free literature package are a huge list of resin on resin abrasives and carbide tipped circular saw blades in addition to a growing selection of band scroll (incl. pinned), jewelers and spiral saw blades. OLSON CATALOG SALES. Free. Circle No. 1365.

ROUTER BITS, SHAPER CUTTERS, FORSTNER BITS—Boring bits, saw blades. All heavy duty industrial grade tungsten carbide. You name it, if it rotates and cuts, we have it. Quality, price, selection, save 50% or more over "wholesale" prices. Catalog comes with a \$3.00 discount coupon. SKYCROFT TOOLS INC. \$1.00. Circle No. 1372.

HARDWARE/WOOD PARTS

TURNED WOOD PARTS—Quality shaker pegs, candle cups, spindles, wheels, balls, dowels, screwhole buttons, cargo and much more. High quality. Reasonable prices. Fast service. American made. Free shipping on orders over \$25. 28-page catalog. AMERICAN WOODCRAFTERS SUPPLY. 75c. Circle No. 1405.

HARDWARE CATALOG—A unique 48-page catalog of the very finest in classic, traditional solid brass cabinet hardware. All of British or No. American manufacture. Double & single post handles, knobs, escutcheons, standard & specialty hinges, box hardware, brass screws, castors, latches, catches, locks, and more. GARRETT WADE CO. \$3.00. Circle No. 1427.

SQUARE DRIVE SCREWS—Thousands agree—once you try them you will never want to use anything else! The square drive recess virtually eliminates work-damaging driver bit "cam-out," the deep threads result in exceptional holding power, and they are heat treated for strength. Sizes from #4 x 3/8" to #12 x 4", with stainless steel, solid brass, brass plated, and zinc plated available. Quantity discounts. Send for literature. McFEELY HARDWOODS. \$1.00. Circle No. 1450.

WOOD TOY PATTERNS—Patterns for all ages including children's patterns and executive toys. New catalog has many new patterns to choose from including parts and wheels. Send for new catalog and receive a coupon for free wheels and axle pegs. TOYS AND JOYS. \$1.00. Circle No. 1480.

TRADITIONAL TURNINGS FOR THE HOME CRAFTSMAN—Unique selection of bedposts, table legs (dining, sofa, coffee, and end), hutch, gourmet, and kitchen. American, European, and Contemporary designs, available in Ponderosa Pine. Sanded and ready for assembly and finish.

Send for catalog. TRADITIONAL TURNINGS. \$2.00. Circle No. 1485.

DESIGN & DECORATE WITH WOOD MOULDINGS—Contains full-color photos of various household rooms showing extensive use of wood mouldings. Profile drawings of all wood mouldings used to create these finished designs are also shown, plus suggested alternative profiles. A simple way to transform an ordinary room into a showplace on a minimum budget. WOOD MOULDING & MILLWORK PRODUCERS ASSN. \$1.00. Circle No. 1487.

QUALITY AMERICAN-MADE WOOD TURNINGS—such as shaker pegs, spindles, toy wheels, toy parts, craft items, and dowel rods in birch, oak, walnut, and cherry. Send for complete 32-page catalog. WOODWORKS. \$1.00. Circle No. 1490.

INCOME OPPORTUNITIES

Designer trees may soon corner the market.

DESIGNER TREES
Only Mother Nature makes trees. Robert Falls, though, customizes them. Robert, who recently completed his doctorate study at the University of British Columbia, holds a Canadian patent on a method of "culturing cambium in a non-cylinder." In other words, he thinks he can produce flat trees. The 38-year-old native of Vancouver, British Columbia, has also applied for a patent for his technique of growing square trees. Flat boards sawed from a cylindrical trunk result in lots of waste, so Falls researched ways to change the trunk's shape. "You accelerate wood formation where you want the corners to be," he says matter-of-factly.

PARTS FOR YESTERDAY'S TOOLS

When readers write to ask where they can buy parts for obsolete woodworking machines, we often can't provide much help. But we just met a guy who can, especially if you own an old DeWalt saw.

Chuck Wolfe owns and operates Wolfe Machinery in Johnston, Iowa, a business that sells new and used machinery. He carries a host of brand-name machines for both metal- and woodworking, but specializes in DeWalt radial-arm saws. "I've got parts for many old-model

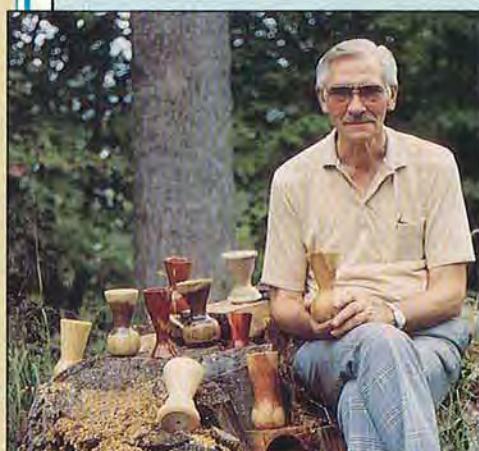

DeWalts, and if I don't have a part, I can probably make it," Chuck says. For inquiries, write: *Wolfe Machinery, 6107 Merle Hay Rd., Johnston, IA 50131*. Call 800-345-6659 or 515/270-2766.

Other possible sources for old machines and parts are members of the Antique Woodworking Power Tool Association (AWPTA). To receive the bimonthly journal covering companies and equipment, send \$14 (U.S.) to *AWPTA, P.O. Box 1027, Connellsville, PA 15425*.

FIRST SAW WAS A SERPENT

Greek legend has it that Talus invented the first saw in 1,200 B.C., according to author Ronald S. Barlow. In his book, *The Antique Tool Collector's Guide to Value* (\$12.95, Windmill Publishing Co., El Cajon, Calif., 1985), Barlow says the ancient Greek discovered the principle of set saw teeth while severing a tree limb with the jawbone of a large serpent. He later reproduced the snake's teeth on a sheet of hammered iron. And the rest, as they say, is history.

From his seat atop the stump of a storm-felled yellow poplar, Flay Terres points out some of the vessels he's turned from Hurricane Hugo's leftovers.

READER REAPS HUGO'S HARVEST

Flay Terres, of Gastonia, North Carolina, has only been working wood since his retirement in 1987 (he was a machinist for 40 years). Nevertheless, he earned a special citation in *WOOD* magazine's 1989 Design-A-Toy contest with his train engine. Now, he writes, he's taken up turning, and thanks to Hurricane Hugo, has a tremendous supply of wood.

"Because of your article on drying green bowls in the microwave [February 1990 issue, p. 46], I am now able to fulfill a lifetime dream. I can go into the woods, cut a chunk of green wood, and

turn it into a finished piece within a few days," Flay says in his letter. Since September 1989, when Hugo unleashed its devastation on the Carolinas, the late-blooming woodworker has tried to make a dent in the downed trees. We found out during a telephone call that he has over 40 vases turned from green wood. "I've turned poplar, apple, dogwood, sassafras, cedar, and even sumac," he notes. "People call me to pick up trees." Last September, on the first anniversary of the storm, Gastonia's public library displayed Flay's collection.

RYOBI PRESENTS "THE WORKAHOLICS™" OF NEW CORDLESS DRILLS.

ENGINEERED TO SET A NEW PERFORMANCE STANDARD FOR CORDLESS DRIVER/DRILLS. THE RYOBI 7.2V, 9.6V AND 12V TORQUE FORCE SERIES FEATURES BREAKTHROUGH MOTOR TECHNOLOGY TO DELIVER MORE POWER LONGER. A KEYLESS CHUCK, ELECTRIC BRAKE AND BUILT-IN BIT STORAGE ARE STANDARD. NEW ERGONOMIC DESIGN AND PRECISION ENGINEERING MEAN BALANCE, HANDLING EASE AND POWER SECOND TO NONE. SEE THE RYOBI RETAILER NEAR YOU.

The Delta Stationary Plate Joiner makes you more productive.

What more can we say?

How about \$299?*

This is one impressive machine. At *any* price.

Even if you already own a portable, your shop isn't really complete without our stationary plate joiner. It's a workhorse that allows you to handle more work, quicker and more accurately.

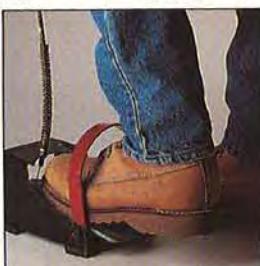

It bolts right to your bench. And thanks to a spring-action foot pedal that controls blade movement, your hands are free to control your work and speed up the whole operation.

A die cast aluminum table supports your work. It raises, it lowers, it does whatever is necessary to handle the stock thickness. And it's slotted to handle an adjustable stock stop for repetitive operations.

You can handle any type cut you can imagine. With all three biscuit sizes. And all for a little less than you'd pay for a top brand portable.

For the name of your nearest Delta Distributor call toll free: 800/438-2486. Or if you'd like a demonstration video, send a check or money order for \$5 to Delta International Machinery Corp., 246 Alpha Drive, Pittsburgh, PA 15238.

*Offer good only from participating distributors in the continental U.S., Alaska and Hawaii from October 1, 1990 to April 30, 1991.
